Question:	Open University is important in public engagement and their input is spread across three parts of the university - could you clarify how OU will interface with the project team?

Answer:	The Open University will interface through the project governance structure with a single point of accountability responsible for activities performed across the university. This person will be engaged through the Project Team and Milton Keynes Low Carbon Living Programme Steering Group. See appendix 8 for more details. During the project development phase the Open University has been represented by Professor Stephen Potter. He has attended the Low Carbon Networks Fund Workstream Lead meetings to support bid development. These sessions bring together representatives from the Council and Partnership, Central Networks, Cranfield University, Open University and a specialist project manager from the Homes and Community Agency. During these meetings all the workstream leads (LCNF submission, ELVIS electric transport, Tattenhoe low carbon new development, Homes Demonstrator, building retrofit, business engagement and public engagement and communications) have provided updates and worked together to ensure alignment across activities and plans. We believe that these meetings demonstrate practically how the Open University can interface with the project team.
