Original Answer:			

Question:	Decision point PB12 refers to "feasibility to trial integrated network and metering telecommunications and data architecture" Please clarify if this is a project stop/abandonment point.

Answer:	Decision point PB12 is a review point for our objective to create a unified IT and telecommunications network for smart grid and smart metering. If we determine that it is not feasible to trial such an integrated network, we would consider this as a significant change in scope. The Project Manager would escalate an issue to the project board and recommend an appropriate course of action. The project board would consider this recommendation in line with our normal governance arrangements. We anticipate changes of this nature would require escalation to Ofgem in line with the LCNF governance arrangements.
