Original Answer:			

Question:	How is the storage (Box 2 iii) to be co-ordinated with LCTs?

Answer:	The Energy Storage will be operated independently from the various LCT as it is not dependant on this technology being installed. The learning from the operation of the equipment will be used in the subsequent modelling and analysis of the network to examine how it could be used to make better use of the LCT. If LCT is installed within the vicinity of the energy storage, SPM will seek to optimise the use of the LCT with through the energy storage device. The trial proposes an energy storage device which is portable and could be moved to an alternative site to allow for greater coordination with LCT.
