Project code:	SSET206	Question Number	2
Question date	29 August 2013	Answer date	5 September 2013
Submission section question relates to	2: Project Description Early Bilateral		
Topic	Technical		
Question	Will all types of lamp fittings be available in LEDs for customer use? If not what proportion of the household fittings need to be replaced with LED to meet the scheme criteria?		
Notes on question			
Answer	The methodology that will be taken with the LED installation trial is as follows: 1) House will be surveyed as part of energy audit 2) A legacy inventory will be prepared, documenting range and number of existing lamp fittings 3) Replacement fittings will be selected and fitted 4) Inventory recorded 5) Estimated energy savings recorded 6) Actual energy savings recorded and compared against initial estimations The supply and roll out of LED lighting will be put out to tender, with a clear scope of expected activities. The majority of lamp fittings are available in LED format and depending on the survey the package provided will comprise a mixture of ES, SES, BC, SBC, GU10 and MR16 fittings- suitable replacements for the most common lamp fittings. There are no criteria that need to be met- the trial will provide insight into the level of potential lamp replacements that households can achieve. The project has planned and budgeted for supplying and installing an average of 12 fittings per property, depending on the results of the		

	survey.
