Electricity Network Innovation Competition Full Submission

Supplementary Answer Form

Project: Black Start from Distributed Energy Resources

Tick if this answer has been provided verbally: ☐

Project code	ESOEN01	Question Number	30
Question date	23 Aug 2018	Answer date	28 Aug 2018
Submission section question relates to	Project Methodology		
Topic	a) Low carbon/environment and net financial benefits		
Question	How will the NIA project on the types of generation to be used feed into this project and will there be a late opportunity for additional generators to participate?		
Notes on question			
Answer	The NIA project will inform the NIC project by identifying the technologies that are of sufficient TRL to be included in case studies. However, learning from the NIA project, as well as input from the Stakeholder Advisory Panel, will also ensure that any solutions proposed by the NIC project will be appropriate for future inclusion of other DER technologies. It is planned that the case studies, including participating DER, will be selected in the Development phase of the project, which will run until mid 2020. Therefore, there will be a full year to implement the learnings of the NIA project, which is due to complete before June 2019. Given the preparations required for online testing it is unlikely that we will be able to add DER to online testing plans after mid 2020.
