Dear Sir/Madam

Thank you for the opportunity to respond on Of gem's consultation paper on Quicker and More efficient Distribution Connections.

Due to the proposed significant energy related investment on Anglesey, including a proposed new nuclear power, marine/tidal energy demonstration zones, solar and biomass projects and the Menai Science Park, there is a need for energy providers and government to ensure that the network is "Fit for Purpose" for future demand and the UK's low carbon transition.

This is a once in a generation opportunity for Anglesey to maximise upon investment in the region and it is imperative that the critical infrastructure is in place prior to the private sector investment.

Due to the scale of potential investment on Anglesey over the next few years it would be prudent for Anglesey to be identified as a 'innovation/development area' which would allow proactive investment to improve the electrical capacity to meet future demand.

This would help remove barriers and increase timely investment in the electricity network to attract further investment in the region. Upgrading infrastructure to unlock investment will allow the Island to maximise upon future Inward Investment and supply chain opportunities associated with these new developments.

Regards

Neil Rowlands
