

I am writing to you to ask you to please please think of the negative affects a windfarm on our tiny Shetland Isles, and how it will affect the future generations who will live here. Yes we have lots of wind here, but we also have a huge tourist industry which has become one of our biggest incomes. After all we were voted the most desirable place in Europe as a holiday destination. No one wants to visit an island that has become a power station, which, if the connecting cable goes ahead, our Islands will become !!!!!!! We may have the square metreage needed, but we do not have the land mass. The fact that no where in Shetland is more then 3 miles from the sea makes this very obvious. I beg you please keep in mind this is our most precious home. You are our last hope to stop this madness. We have never been given the opportunity to voice our opinion and we get little response from our councillors or politicians. We have no where else to turn, as I said you are our last hope.
