

Energy Companies Obligation (ECO) Compliance Update

www.ofgem.gov.uk

Issued December 2013

Issue 5

This compliance update presents energy efficiency measures notified by energy companies to Ofgem by the end of October and **approved** by Ofgem by the end of November 2013. This report currently excludes excess measures carried forward from the Carbon Emissions Reduction Target (CERT) and Community Energy Saving Programme (CESP), which are likely to be material for some companies. The Department of Energy and Climate Change's (DECC) latest monthly [Statistical Release](#) reports on **all measures** notified by energy companies to Ofgem to the end of October, including those which are not yet approved.

What is ECO?

The Energy Companies Obligation (ECO) is a government scheme which places obligations on larger energy companies* to deliver energy efficiency measures to domestic premises in Great Britain. Ofgem is responsible for administering ECO on behalf of DECC. Each month energy companies notify Ofgem of measures installed in the previous month.

The three obligations under ECO are:

- **Carbon Emissions Reduction Obligation (CERO):** solid wall and hard-to-treat cavity wall insulation alongside other insulation measures and connections to district heating systems;
- **Carbon Saving Community Obligation (CSCO):** insulation measures and connections to district heating systems in areas of low income and rural areas; and
- **Home Heating Cost Reduction Obligation (HHCRO):** measures that reduce the overall cost of home heating to low income and vulnerable households, including insulation measures and the repair and replacement of boilers.

Approved measures

Fig. 1) ECO approved measures by category

The table below shows the cumulative measures approved by Ofgem.

Measure Category	CERO	CSCO	HHCRO	Cumulative Total
Solid Wall Insulation	7,369	1,273	5	8,647
Cavity Wall Insulation	28	16,161	5,051	21,240
Hard-To-Treat Cavity Wall Insulation ¹	16,131	301	-	16,432
Loft Insulation	4,347	41,827	19,276	65,450
Other Insulation ²	230	124	18	372
Boiler – Replacement	N/A ⁴	N/A	63,224	63,224
Boiler – Repair	N/A	N/A	287	287
Other Heating ³	N/A	N/A	6,973	6,973
District Heating System	-	-	-	-
Micro-generation	N/A	N/A	-	-
Total	28,105	59,686	94,834	182,625

¹ Hard-to-treat cavities include narrow cavities, cavity walls in tall buildings, cavity walls in certain non-standard construction types or those which are too difficult to treat with standard materials or require works to be carried out before installation.

² Includes hot water cylinder insulation, draught proofing and window glazing.

³ Includes heating controls, heat recovery ventilation and warm air units.

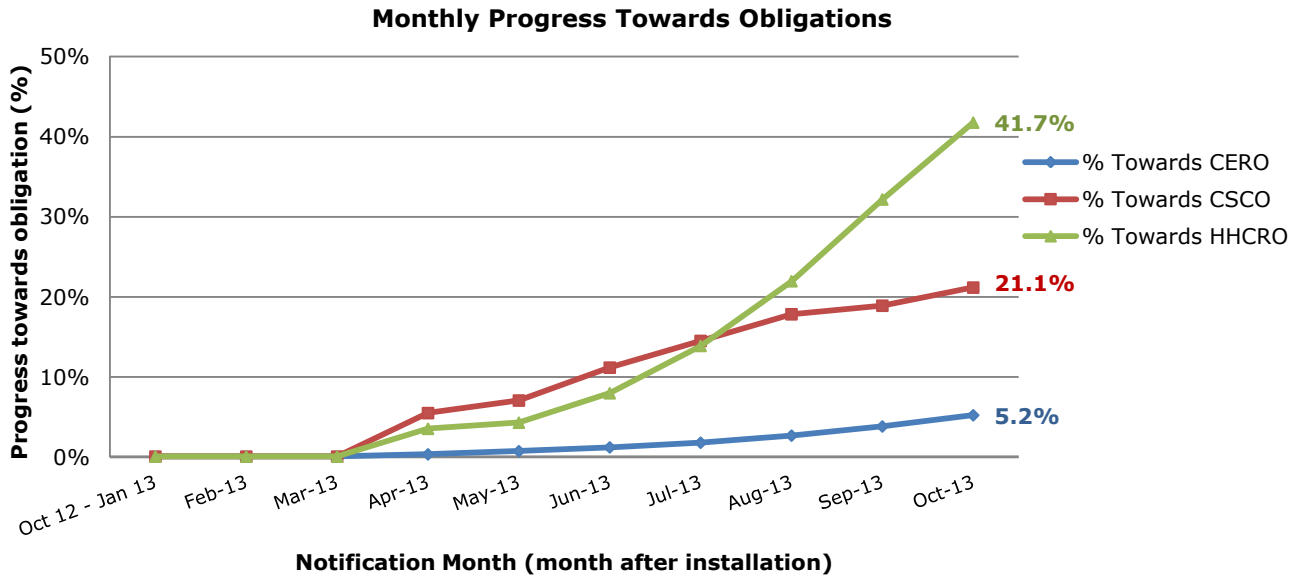

⁴ N/A - this measure category is not eligible to be claimed under this obligation.

Progress towards obligations

The scheme is currently 60% of the way through phases 1 and 2 (which cover the period 1 January 2013 to 31 March 2014).

Fig. 2) Cumulative overall progress towards phase 1 & 2 obligations (approved measures only)

The chart below shows energy companies' cumulative monthly progress towards phase 1 and 2 obligations. Note the legislative requirement on suppliers is 100% compliance against each of the obligations over the whole period to March 2015. The run rate will need to increase in order for energy companies to meet their obligations.

Notified measures

In addition to the 182,625 approved measures presented in Figure 1, a further 121,170 measures were notified to Ofgem by the end of October. Together, these figures constitute the 303,795 measures published in DECC's November Statistical Release.

Of the 121,170 measures which were notified to Ofgem but not yet approved, circa 44,000 have been sent back to energy companies for data correction or completion of missing information. These measures will be reassessed and approved (if appropriate) once they are re-submitted. A further c.60,000 are currently undergoing further checks to ensure that they are valid measures under ECO; the majority of these are hard-to-treat cavity measures in CERO. The remaining c.17,000 measures are currently being processed and are expected to be approved shortly if the necessary information is in order. We are working closely with energy companies to resolve any issues relating to the notification of measures.

Still have questions?

For further information about the ECO scheme, please visit our website www.ofgem.gov.uk

For enquiries regarding ECO (with the exception of the media), please contact the ECO team via email at ECO@ofgem.gov.uk.
