Access and Forward-looking Charges Significant Code Review: Consultation on Minded to Positions

The TNUoS methodology is fundamentally unfit for the present era, and still incentivises centralised fossil-fuel generation in England and Wales, whilst penalising renewable generation in Scotland. This is entirely at odds with our net zero pathway. Hydro schemes, wind turbines, solar panels, tidal and wave turbines are all dependent on the local natural resources. Community-owned renewable energy projects tend to cluster in areas where those resources are found in abundance, and by their nature, cannot locate generation far distant from their communities. The priority for Ofgem in our view, should be to support and encourage a fair, flexible and realistic plan for decarbonising the UK energy resources which includes and supports citizen-led community energy rather than working against it.

Yours sincerely,

Laura French
