Dear Nancy,

In response to the public consultation on the LTS Futures Programme, BSI is pleased to provide this letter of support.

We note the LTS Futures Project forms part of the UK's national hydrogen research programme to deliver a Net Zero decarbonisation solution for customers.

The British Standards Institution (BSI) is a world leading national standards body that helps to support clients in how they can operate in safer, more secure and sustainable ways. Sharing knowledge, fostering innovation and instilling best practice is at the heart of the of BSI to ensure a more resilient world. As the UK's national standards body, the standards we create improve the quality and safety of products, services and systems. BSI is passionate in supporting a transition to low carbon energy systems and has increased its portfolio of programmes with UK Government to enable market innovation and support the move to a low carbon economy.

Some time ago LTS Futures was presented to BSI for change of use standards for hydrogen and CO₂. IGEM TD1 and TD13 hydrogen supplements have been produced.

BSI is working with IGEM on assessing the viability of existing LTS pipelines and assets for low carbon gas such as hydrogen through development of a blueprint for repurposing. Delivery of the programme will offer a route to distribute low carbon gas at scale in the UK to tackle the decarbonisation challenge for a variety of sectors.

Yours sincerely

Bernard Shelley

Lead Standards Development Manager, Energy, Oil and Gas
