Dear Ruben

CMP308 – Minded-to decision and draft impact assessment

InterGen owns and operates three CCGT gas fired power stations at Coryton, Spalding and Rocksavage in addition to an OCGT gas fired power station at the Spalding site. As with InterGen's response in May 2019 to the Workgroup Consultation on CMP308: Removal of BSUoS charges from Generation, we are in support of Ofgem's minded-to position to progress the proposal. We are also in support of the implementation date of 1st April 2023.

Should you wish to discuss any of our comments directly, please do not hesitate to get in touch.

Lisa Mackay
Trading and Commercial Director
InterGen UK
