RE: Price cap: reflecting potential changes to BSUoS charged in the price cap  
[OFFICIAL ]

In our response (dated 23 December) to Ofgem's November 2022 consultation we set out that we did not have any specific concerns with the manner in which Ofgem proposes to calculate a transitional adjustment when moving from an ex-post to an ex-ante BSUoS recovery mechanism under the Default Tariff Cap. I can confirm that further to the email below which sets out how Ofgem intend to consider inflation when calculating the relevant adjustment, EDF's position remains the same in that we do not have any specific concerns with Ofgem's proposed approach in this respect.

Regards

January 2022 and March 2023.

In our consultation, we did not address whether inflation would be considered when computing the transitional adjustment in our consultation. We are **now considering** this when calculating a potential transitional adjustment. Specifically, whether the historical offset should be adjusted by the Consumer Prices Index including owner occupiers' housing costs (CPIH), in order to maintain consistency with how we calculate other ex-post adjustments within the price cap.

We welcome your feedback in this area, and would appreciate it if you could provide any representations by 1pm on Thursday 26 January 2023.

Kind Regards
