Dear Steve,

ENWL response to Ofgem notice to issue regulatory instructions and guidance under the electricity distribution network operators price control RIIO-ED2

We welcome the opportunity to contribute to the design of the RIGs reporting process for RIIO-ED2. As the reporting packs and commentaries have needed to change considerably in some areas from those used in ED1, we understandably have a significant volume of changes proposed. We will continue to work with DNOs and Ofgem to develop the RIGs as required to make them fit for purpose.

The appendix to this letter contains our comments on each of the packs and guidance documents being consulted on. We have a lot of comments on minor amendments that need to be made to the pack to correct calculation errors, or clarifications to the guidance. We have also provided proposals to the ENWL-specific areas such as Smart Street, LineSight and Dig Fix and Go, which we are keen to discuss further with Ofgem if further work or required.

We have provided the comments to the consultation in the annex attached as a priority, and will update Gitlab and the Sharepoint documents in due course.

We also note some changes that need to be made to either the licence values spreadsheet (which we will send under separate cover), which we note is in the CVR pack as I3, and companies special licence conditions. It is important that all of these are aligned with anything within the RIGs, and particular care is taken to ensure that all licence values quoted in the RIG are completely accurate and reflect the latest versions of the special licence conditions.

We look forward to continuing the work to develop the ED2 RIGS.

Yours sincerely

Paul Auckland
Head of Economic Regulation
