

POLICY CONSULTATION RESPONSE 2

I would like to take part in the consultation process. I live in a Park Home where my gas (LPG) is supplied to a metered tank by [REDACTED]. I have seen the prices rise over the last few months but have not seen any reductions. I would like to see LPG included in the price cap process.

I also have an electricity meter at my home but I do not have a direct contract with an energy company. The Park Owner reads the meter and currently charges me 38 per kWh which we have been paying since April 2022. I have no idea how much he pays for the electricity as he refuses to give me a copy of his bill. I assume he is making money on the electricity as I doubt he would want the inconvenience of reading over 300 meters if he wasn't making a profit.

We also didn't receive any rebate through the energy bills relief scheme. I believe he will have got a rebate as a business user but he certainly didn't pass it on.

I believe those living in Park Homes have no protection from Park Owners who can charge whatever they want. I've heard of some residents being charged between 70-90p per kWh. I strongly believe as I have my own electricity meter I should be classed as a domestic user and have a direct contract with an energy supplier. I would then be able to shop around and find the best deal for me.

I hope to hear from you in the coming weeks.
