---

This governance document is the Small Decarbonisation Projects Re-opener Governance Document (the 'SDP Re-opener Governance Document'), issued and amended in accordance with Special Condition 3.4 (Small Decarbonisation Projects Re-opener (SDPt) of the Gas Transporter Licence. It sets out the SDP Re-opener's arrangements for the gas distribution networks (GDNs) and National Gas Transmission plc (NGT) (together the 'Network Licensees') including details on its scope, process, and materiality thresholds.

In this document we use the terms 'Ofgem' and 'the Authority' as well as the terms 'we', 'us' and 'our' interchangeably. Ofgem is the Office of the Gas and Electricity Markets. The Authority is the Gas and Electricity Markets Authority and is the governing body of Ofgem, consisting of non-executive and executive members. Any monetary values in this SDP Re-opener Governance Document are in sterling in a 2023/24 price base.

## 1. Introduction

### **The Small Decarbonisation Projects Re-opener**

- 1.1. The Small Decarbonisation Projects (SDP) Re-opener, introduced in RIIO-2 as the cross-sector Net Zero Pre-construction Work and Small Projects Re-opener, is an Authority-only triggered mechanism.
- 1.2. It exists to allow Network Licensees to undertake early design or developmental work that relates to decarbonisation, small decarbonisation projects, and decarbonisation facilitation projects related to green gas (namely biomethane), shrinkage-related activities, and (for the GDNs only) Regional Energy Strategic Plan (RESP) coordination and the roll out of the Digital Platform for Leakage Analytics.

### **Compliance**

- 1.3. Network Licensees are required by Special Condition 3.4 of the Gas Transporter Licence (Small Decarbonisation Projects Re-opener) to comply with this document.

### **Review**

- 1.4. Ofgem may from time to time, following consultation with Network Licensees and other interested parties, revise this SDP Re-opener Governance Document in accordance with the SDP Re-opener licence condition.

## 2. Scope, materiality thresholds and process

### Section summary

This section outlines the scope for the SDP Re-opener, including its Authority-only trigger, broad coverage and materiality thresholds, alongside the process before and after the re-opener is triggered.

### Scope

2.1 The SDP Re-opener is an Authority-only triggered re-opener. It has a broad scope, including:

- early design or developmental work that relates to decarbonisation, which may include front end engineering design (FEED) studies, conceptual design pre-FEED and general feasibility work required for larger capital projects;
- small decarbonisation projects that are too material to be eligible for the Decarbonisation Project Development use-it-or-lose-it allowance (DPD UIOLI), ie above the maximum spend per project of £2.5m, or not material enough (or appropriate) for the DEP Re-opener or Heat Policy Re-opener, which have the default materiality threshold;<sup>1</sup>
- small decarbonisation projects related to green gas, shrinkage-related activities, and (for the GDNs only) the roll out of the Digital Platform for Leakage Analytics and Regional Energy Strategic Plan (RESP) coordination; or
- small decarbonisation projects that may be interpreted as innovative, where there is a clear need, it is appropriate for natural gas consumers to fund them, and they are not captured through the RIIO-3 innovation mechanisms; or
- full-time equivalent (FTE) resources where necessary to deliver these projects.<sup>2</sup>

2.2 We may, over time, update the detailed scope of this re-opener in accordance with the SDP Re-opener licence condition, if required.

### Shrinkage-related activities

2.3 The SDP Re-opener can be used to fund shrinkage-related projects.

2.4 Northern Gas Networks (NGN), SGN and Wales and West Utilities (WWU) may use the SDP re-opener to fund the roll out of the Digital Platform for Leakage Analytics (DPLA). We expect these GDNs to trigger the re-opener in year three of RIIO-GD3 for the purpose of having rolled out a consistent version of DPLA by the end of

---

<sup>1</sup> Default materiality threshold: adjustments to allowed revenue will only be made if the proposed adjustment as assessed by the Authority, when multiplied by the TIM rate, exceeds 0.5% of annual average ex ante base revenue.

<sup>2</sup> FTE resources are allowed under the SDP Re-opener where – and only where – they are clearly time-limited, demonstrably incremental, and directly linked to the delivery of specific eligible activities or projects.

RIIO-GD3. These GDNs must agree an appropriate timeline with us for triggering the re-opener for this purpose.

- 2.5 The GDNs may also use the SDP Re-opener to fund additional Advanced Leakage Detection (ALD). For example, when the materiality of this additional ALD exceeds the maximum spend per project for the DPD UIOLI. We expect NGN, SGN and WWU to survey the entirety of their low pressure (LP) and medium pressure (MP) networks at least once by the time business plans are submitted for RIIO-GD4. We consider it important for all GDNs to have surveyed their entire LP and MP networks at least once in RIIO-GD3 to inform our development of a Shrinkage ODI-F in RIIO-GD4. The GDNs must agree an appropriate timeline with us for triggering the re-opener for this purpose.
- 2.6 NGT may use the re-opener to fund ALD where the intent is to efficiently reduce its fugitive emissions.<sup>3</sup>

### Regional Energy Strategic Plans (RESP) coordination and engagement – GDNs only

- 2.7 A decision is expected in early 2026 for the GDNs' RESP licence obligation (LO). This LO will require the GDNs to support the National Energy System Operator (NESO) in developing the RESP, while the requirements for how the GDNs should use RESP outputs will be set out in the RIIO-GD4 Sector Specific Methodology Decision.
- 2.8 In January 2026, the NESO published the transitional RESP (tRESP). The tRESP is focused on electricity distribution and does not have direct implications for GDN planning. We outlined the scope of the tRESP in an open letter in February 2025.<sup>4</sup> While the tRESP is not designed for GDN planning, the GDNs may perceive it has implications for their investment plans. If the GDNs consider changes are justified based on the tRESP, these would need to be submitted and assessed through uncertainty mechanisms such as the SDP Re-opener.
- 2.9 The full RESPs will be published later in RIIO-GD3. Gas planning in the RESPs will outline a five-year time delay to allow the RESP to inform the RIIO-GD4 price control. This will drive development which responds to, rather than precedes, changes in demand. However, if the GDNs consider in-period changes are required to their RIIO-GD3 investment plans based on the RESPs, these would also need to be submitted and assessed through uncertainty mechanisms such as the SDP Re-opener.

---

<sup>3</sup> ALD means the proactive identification, localisation and characterisation of gas leakage from gas distribution networks and the gas transmission system using detection, sensing or analytical techniques that go beyond traditional reactive, safety-driven leak response processes, without prescribing any specific technology or methodology.

<sup>4</sup> [Scope of the transitional Regional Energy Strategic Plan | Ofgem](#)

## **Guidance** Small Decarbonisation Projects Re-opener Governance Document

2.10 The GDNs may use the SDP Re-opener for coordination and engagement activities with stakeholders for the development of any net zero-related strategic planning.

2.11 Any RESP-related activities funded via the SDP Re-opener must be:

- in preparation for RESP outputs; or
- for the purposes of coordination and engagement with the NESO to inform the RESPs; or
- for associated stakeholder engagement with Ofgem or other relevant stakeholders to inform the RESPs; or
- for in-period changes to RIIO-GD3 investment plans based on the RESPs.

2.12 This includes, where necessary and strictly for this purpose, the funding of any activity that is demonstrably, and in an efficient manner, preparing the GDNs for outputs made by the RESPs. For example, the cost of engagement with NESO or research to ensure that the GDNs are prepared for the outputs made by the RESPs.

2.13 The GDNs may use the SDP Re-opener to fund full-time equivalent resources where necessary and strictly for the purposes outlined in paragraph 2.11. However, the SDP Re-opener should not be used to fund any activity that may be unnecessarily duplicative of the work undertaken by NESO in developing the RESPs. Any application that contains activity we consider unnecessarily duplicative will be rejected.

### **Zero Emissions Vehicles (ZEVs)**

2.14 Given that NGT is not included in the Operational Transport Emissions Reduction Price Control Deliverable (PCD), it could utilise this re-opener to fund its purchase or lease of ZEVs. The GDNs may also use this re-opener to increase their rollout of ZEVs, however only under the scenario that their PCD allowance has been exhausted.

### **Ineligible projects**

2.15 Network Licensees must not use the SDP Re-opener to fund hydrogen-related projects, except where:

- the funding is used for GDN activities to roll out hydrogen blending following a government decision to enable the implementation of hydrogen blending into the gas distribution network; or
- for NGT, the funding is used on activities to roll out hydrogen blending following a government decision to enable hydrogen blending into the GT network, and for the GDNs, any downstream impacts of such a decision; or
- the funding is used to support activities associated with hydrogen heating arising from a government heat policy decision to use hydrogen for domestic heating.

## **Guidance** Small Decarbonisation Projects Re-opener Governance Document

- 2.16 The costs associated with the SDP Re-opener must be for network activities. Network Licensees must not use the SDP Re-opener for the development and innovation of vehicles, gas production or activities downstream of the meter.
- 2.17 Network Licensees must not use the SDP Re-opener for any activities that are eligible for funding in accordance with Special Condition 3.15 (Biomethane use it or lose it allowance).

### **Materiality threshold**

- 2.18 The materiality threshold for this re-opener is £1m per project and there is a project maximum of £100m. Network Licensees cannot achieve the materiality threshold by aggregating different types of projects. The materiality threshold can be met through anticipated costs.

### **Process**

- 2.19 There is a wide spectrum of projects and work that may come through this re-opener where applying a rigid, uniform process may not be appropriate.
- 2.20 To achieve agility in our decision making, we will actively engage with relevant stakeholders to establish, in principle, the needs case for an investment before the re-opener is triggered.
- 2.21 The key elements of the re-opener process are illustrated in Table 1 below with further additional information below Table 1.

### **SDP Re-opener contributions**

- 2.22 Where a potential SDP Re-opener project is substantially innovation related (for example, it could also be eligible for funding under either the Strategic Innovation Fund or Network Innovation Allowance), a contribution should be considered. We expect companies to follow a similar approach to that set out in the Strategic Innovation Fund governance document in considering whether a contribution to the project should be provided:
- the default level of expected contribution is 10% for substantially innovative projects
  - Network Licensees can justify higher or lower contributions as appropriate for a specific project, based on considerations such as levels of risk and financial benefit. For example, Network Licensees may suggest a lower contribution where they do not expect to financially benefit from a project or a higher contribution to account for the extent of non-network benefits that the project has the potential to deliver.

2.23 Contributions can be made from the Network Licensee or third parties involved in the project and can include benefits-in-kind.<sup>5</sup> This can include funding from government where there is a contractual commitment and the contribution is directly related to activities being funded by Ofgem.

2.24 In some cases, we may consider whether it is appropriate to confirm our expectations for the level of the contribution in the pre-trigger Engagement Phase of the SDP Re-opener process, following engagement with the Network Licensee. Based on this, the Network Licensee should then confirm the contribution it proposes to make towards its project within its application.

**Table 1: The SDP Re-opener process**

Before Authority Trigger: Engagement Phase

Step	Purpose
Engagement	<p>Active engagement between Network Licensees and the Authority to understand the project need and establish a needs case, in principle:</p> <ul style="list-style-type: none"> <li>• What is being proposed;</li> <li>• The project cost;</li> <li>• The aim of the project and evidence that it fits into wider strategic goals;</li> <li>• Why it is appropriate for this to be funded by network consumers and through this re-opener, and how the funding should be treated from a regulatory point of view; and</li> <li>• The timelines for the project including its anticipated length and the submission dates for the detailed assessment phase (see below).</li> </ul> <p>This Engagement Phase will be informed, and developed, over time through engagement with the relevant stakeholders, including Network Licensees and government.</p>
Information gathering	<p>A process to draw out key information above and any additional information to help establish the needs case.</p> <p>Where appropriate, Ofgem will provide guidance on structures and templates for this information.</p>

---

<sup>5</sup> This includes any non-cash benefit (eg resources/services) of monetary value that are provided for the delivery of the project by project partners.

## After Authority Trigger: Assessment Phase

<b>Step</b>	<b>Purpose</b>
Licensee application	<p>For funding to be provided under the SDP re-opener, the Network Licensee will need to submit an application to us.</p> <p>Unless otherwise specified, the licensee application will include:</p> <ul style="list-style-type: none"> <li>• A detailed needs case;</li> <li>• Detailed cost information, including a cost-benefit analysis, which itself will include the proposed regulatory treatment of the costs;</li> <li>• An engineering justification paper; and</li> <li>• A policy justification paper, which explains why an adjustment to allowances is justified and how the project aligns with overall strategic aims.</li> </ul> <p>Through the Engagement Phase, specific proformas for the above may be developed and requested to be used by us.</p>
Consultation	<p>Based on the characteristics of the project we will determine whether a policy consultation is appropriate and the length of time. This is in addition to the required consultation on the proposed funding decision.</p>
Funding decision	<p>The Authority makes a funding decision and directs the relevant changes. This will include a decision on the regulatory treatment of approved funding.</p>

2.25 The two steps in the Engagement Phase above will be informed and developed over time, through engagement with the relevant stakeholders, including Network Licensees and government.

2.26 Where appropriate, information to assist Network Licensees such as pro formas to support information gathering and terms of reference, may be published on our website.

## Consultation

2.27 Under the Assessment Phase of the project, we will endeavour to take a proportionate approach to assessing the project to make quick decisions where this is appropriate. Some of the matters we will consider are:

- the value of the work or project, including its scale and impact;
- the complexity of the work or project;
- how the work or project aligns with strategic policy aims; and

## **Guidance** Small Decarbonisation Projects Re-opener Governance Document

- whether or not our funding decision is precedent setting.
- 2.28 Ofgem’s general approach to managing all RIIO-3 re-opener application assessments in a proportionate way will be set out in our Re-opener Guidance and Application Requirements Document. This document includes further information on how we will manage the applications pipeline and how we will assess applications in a proportionate way, including indicative timescales. This SDP Re-opener Governance Document should be read in conjunction with this further guidance.

### **Funding decision**

2.29 We will engage Network Licensees throughout on the potential regulatory treatment of the approved funding, and:

- Prior to a funding decision being made, we will consult on the proposed funding decision. This will include any draft conditions to hold licensees to account for specific project deliverables, such as evidence to be reported to Ofgem or milestones that may require Ofgem approval before the project can progress further.
- Once the consultation is published, Ofgem will engage with the Network Licensee on the wording of the draft conditions and may make clarifications or amendments as a result of the engagement.
- At the end of the project, Ofgem will expect a close-down report from the Network Licensee setting out how it has met the conditions and any instances of under or non-delivery. Under or non-delivery may be permissible subject to a well-reasoned justification from the Network Licensee. The licensee may also set out well-reasoned justifications for the return of some contributions where the licensee has met all project conditions at a lower than expected cost, for example a material efficient underspend or halting a project early. Where Ofgem determines the Network Licensee has been unable to justify under or non-delivery, it may consider that some of the funding should be returned to consumers. In this case, Ofgem may adjust the funding awarded following the process provided in Special Condition 3.4.

2.30 As part of our funding decision, we may also:

- Require Network Licensees to share knowledge in a way which is broadly consistent with the RIIO-3 innovation funding mechanisms;
- Socialise approved funding across all consumers through issuing a direction under Special Condition 6.1 of the NGT licence.
- Set out how the value of any funding to be returned will be calculated.
- We may consider whether further licence changes are needed to support different regulatory treatments under this re-opener in relation to each project, for example to:

## **Guidance** Small Decarbonisation Projects Re-opener Governance Document

- adopt 'project directions' in a similar manner to the Network Innovation Allowance (NIA) to record and hold licensees to account for specific deliverables;
- direct the appropriate split between upfront funding and longer-term funding (through the Regulatory Asset Value or RAV); and/or
- apply the Totex Incentive Mechanism (TIM); and/or
- socialise approved funding across all consumers.
- If the licence is amended, we would expect to amend this governance document to provide further information on the regulatory treatment options under this re-opener.

## Send us your feedback

We are keen to receive your feedback about this guidance. We would also like to get your answers to these questions:

- Do you have any comments about the quality of this guidance?
- Do you have any comments about its tone and content?
- Was it easy to read and understand? Or could it have been better written?
- Do you have any further comments?

Please send your feedback to [stakeholders@ofgem.gov.uk](mailto:stakeholders@ofgem.gov.uk).
