Dear Sir/Madam,

SLC 31E Procurement and use of Distribution Flexibility Services

With reference to Distribution Standard Licence Condition 31E, I write to inform the Authority that Eclipse Power Distribution (formerly Vattenfall Networks) do not intend to procure distribution flexibility services in the 12 months following the annual submission date (1 April 2026).

Eclipse Power Distribution currently own and operate electricity infrastructure that supplies fewer than 100 energised sites. All these sites are relatively simple, with either a single customer or a few customers fed from a single piece of Eclipse Power Distribution owned infrastructure - typically a distribution transformer. Eclipse Power Distribution infrastructure assets are sized to provide the adequate electricity supply to our customers. At these sites there is no scope to use flexibility services to allow for more efficient use of the asset.

Eclipse Power Distribution fully support the Authority's actions to require the procurement and use of flexibility services, where these are appropriate. Should Eclipse Power Distribution adopt an electricity network where the procurement and use of flexibility services is a viable option, we will look to procure and use flexibility services to ensure this network is operated efficiently. The Authority will be informed of any action Eclipse Power Distribution takes in this area, in accordance with the Standard Licence Conditions.

Yours faithfully,

A handwritten signature in dark ink, appearing to read 'D.J.S. Dawson'.

Donald James Stewart Dawson

Managing Director
