

MAM Documents

The gas industry, through the Review of Gas Metering Arrangements (RGMA) project has designed and base lined standard industry-wide processes and data flows to support the competitive gas metering market. The consequential liberalisation of the gas supply market and its ancillary services has created the opportunity for the development of Meter Asset Management businesses.

The attached documents contain the processes and procedures that must be followed by those wishing to become Ofgem Approved Meter Asset Managers. This MAM Code of Practice and the associated self certification documents can be downloaded from: www.ofgem.gov.uk/ofgem/work/index.jsp?section=/areasofwork/meteringrgma
