

Subject: Quick Response to Initial Proposals on transitional incentive schemes supporting the offtake arrangements

Matteo,

CIA has read the above consultation and agrees with not setting the NTS transitional incentives until the price control review which will allow for more consistent review.

We're relatively new to ARCAs so would want to see further information on standard ARCA terms.

We recognise the need to ensure that DNs do not overbook capacity but we also require secure gas supplies (in terms of there being enough capacity).

Our main issues lie with the reform to DN-interruption arrangements and we await the commencement of these discussions.

Sorry for the rather rushed response.

We look forward to seeing the final proposals document.

Kind regards,

Helen
