

Structure of Charges

SP Progress Update

- ⌘ SP working closely with other DNOs as part of joint working group.
- ⌘ Data gathering for populating the tariff model for SP Manweb and SP Distribution well underway.
- ⌘ Developing an alternative approach for determining marginal costs (working paper circulated for information/ comment).
- ⌘ Working closely with SSE and CN to develop this approach.

Structure of Charges

SP Progress Update

- ⌘ SP Manweb network interconnected and complex to model.
- ⌘ External network analysis consultant developed tool for full contingency analysis on all 132kV and 33kV groups.
- ⌘ Outputs are voltage and capacity constraints under outage conditions as demand and generation added.
- ⌘ Similar work being undertaken by SSE. Joint meeting with design teams from SP, SSE and CN this week.
- ⌘ For SP Distribution, simpler modelling required due to nature of the network.
- ⌘ SP now commencing full analysis of EHV networks as part of Long Term Development Statement process.
