Electricity Distribution: CE Electric charging methodology condition - Authority decision letters

Ofgem is publishing the Gas and Electricity Markets Authority's (the Authority) decisions on the conditions imposed on Northern Electric Distribution Limited's (NEDL) and Yorkshire Electricity Distribution plc's (YEDL) statement of use of system charging methodology.

Conditions were applied to the approval of NEDL's and YEDL's statement of use of system charging methodology. These conditions were originally set out in the Authority's decision documents dated 11 February 2005. The conditions were updated in the Authority's decision letters dated 20 December 2005.

The letters now being published concern the condition to develop an alternative use of system charging model and implement it by 1 April 2007.

Further information on the charging methodologies and the interim charging regime is available on the Ofgem website, www.ofgem.gov.uk under the Electricity Distribution Charges area of work.
