The following items do not form part of the approved Distribution Code and are for information only:

- Guidance Note 1
- The Introduction to the Distribution Code, ie DIN1 to DIN 7
- The Guide to the Distribution Code of Great Britain
DISTRIBUTION GLOSSARY AND DEFINITIONS (DGD)
DGD 1. EXPRESSIONS

In this **Distribution Code** the following words and expressions shall, unless the subject matter or context otherwise requires or is inconsistent therewith, bear the listed meanings:

- **Act**

- **Active Power**
  The product of voltage and the in-phase component of alternating current measured in units of watts, normally measured in kilowatts (kW) or megawatts (MW).

- **Annex 1 Standard**
  A electricity industry national standard that implements **Distribution Code** requirements and which is listed in Annex 1 of the **Distribution Code**, and forms part of the **Distribution Code**.

- **Annual Average Cold Spell (ACS) Conditions**
  A particular combination of weather elements that give rise to a level of Peak Demand within a financial year which has a 50% chance of being exceeded as a result of weather variation alone.

- **Apparatus**
  All **Equipment** in which electrical conductors are used, supported or of which they may form a part.

- **Appendix 2 Standard**
  A electricity industry national standard that has a material effect on **Users** but does not implement any **Distribution Code** requirements and does not form part of the **Distribution Code** technical requirements. A list of these standards is maintained by the **Distribution Code Review Panel** as Appendix 2 to the **Guide to the Distribution Code**.

- **Authorised Electricity Operator or AEO**
  Any person (other than the **DNO** in its capacity as an operator of a Distribution System) who is authorised to generate, participate in the transmission of, distribute or supply electricity.

- **Authority**
  The Gas and Electricity Markets Authority established under Section 1 of the Utilities Act 2000.

- **Average Conditions**
  That combination of weather elements within a period of time which is the average of the observed values of these weather elements during equivalent periods over many years (Sometimes referred to as normal weather).

- **Balancing and Settlement Code (BSC)**
  The code of that title as from time to time amended.

- **Balancing Mechanism**
  Has the meaning set out in NGC’s **Transmission Licence**.
BM Unit
Has the meaning set out in the BSC, except that for the purposes of the Distribution Code the reference to “Party” in the BSC shall be a reference to a User.

BM Participant
A person who is responsible for and controls one or more BM Units or where a CUSC Bilateral Agreement specifies that a User is required to be treated as a BM Participant for the purpose of the Grid Code. For the avoidance of doubt, it does not imply that they must be active in the Balancing Mechanism.

Black Start
The procedure necessary for a recovery from a Total Shutdown or Partial Shutdown.

Black Start Station
A Power Station which is registered pursuant to a CUSC Bilateral Agreement with NGC, as having a Black Start Capability.

CENELEC
European Committee for Electrotechnical Standardisation.

Civil Emergency Direction
Directions given by the Secretary of State to AEOs for the purpose of mitigating the effects of any natural disaster or other emergency which, in the opinion of the Secretary of State, is or may be likely to disrupt electricity supplies.

Committed Project Planning Data
Data relating to a User Development once the offer for a Connection Agreement is accepted.

Connection Agreement
An agreement between the DNO and the User or any Customer setting out the terms relating to a connection with the DNO’s Distribution System (excluding any such agreement with the Transmission Licensee CUSC Bilateral Agreement).

Connection Point
An Entry Point or an Exit Point of the Distribution System as the case may be.

Control Centre
A location used for the purpose of control and operation of all, or of part of a Distribution System, GB—Transmission System National Electricity Transmission System or the System of a User.

Control Person
A person who has been nominated by an appropriate officer of the DNO, Transmission Licensee or a User to be responsible for controlling and co-ordinating safety activities necessary to achieve Safety From The System.

Control Phase
The period 0-24 hours inclusive ahead of real time operation. The Control Phase follows on from the Programming Phase and covers the period down to real time.

CUSC
Has the meaning set out in NGC’s Transmission Licence

CUSC Bilateral Agreement
An agreement pursuant to the CUSC Framework Agreement made between NGC and a User of the GB—Transmission System—National Electricity Transmission System.
CUSC Disputes Resolution Procedure

The procedure described in CUSC relating to disputes resolution.

CUSC Framework Agreement

Has the meaning set out in NGC’s Transmission Licence.

Customer

Any person supplied or entitled to be supplied with electricity at any premises within Great Britain but shall not include any Authorised Electricity Operator in its capacity as such.

Customer With Own Generation or CWOG

A Customer with one or more Generation Sets connected to the Customer’s System, providing all or part of the Customer’s electricity requirements, and which may use the DNO’s Distribution System for the transport of any surplus of electricity being exported.

DC Converter

Any Apparatus used to convert alternating current electricity to direct current electricity, or vice versa. A DC Converter is a standalone operative configuration at a single site comprising one or more converter bridges, together with one or more converter transformers, converter control equipment, essential protective and switching devices and auxiliaries, if any, used for conversion. In a bipolar arrangement, a DC Converter represents the bipolar configuration.

DNO’s Distribution System

The System consisting (wholly or mainly) of electric lines owned or operated by the DNO and used for the distribution of electricity between the Grid Supply Points or Generation Sets or other Entry Points to the points of delivery to Customers or Authorised Electricity Operators, or any Transmission Licensee within Great Britain and Offshore in its capacity as operator of the licensee’s Transmission System or the GB Transmission System—National Electricity Transmission System and includes any Remote Transmission Assets (owned by a Transmission Licensee within Great Britain), operated by the DNO and any electrical plant and meters and metering equipment owned or operated by the DNO in connection with the distribution of electricity, but shall not include any part of the National Electricity Transmission System—GB Transmission System.

Decimal Week

The week numbering system where week 1 commences in the first week of January on a date as advised by the DNO.

Demand

The demand of MW or MVAr of electricity (ie both Active Power and Reactive Power respectively) unless otherwise stated.
Demand Control

Any or all of the following methods of achieving a Demand reduction:
(a) Customer voltage reduction initiated by the DNO (other than following an instruction from NGC);
(b) Customer Demand reduction by disconnection initiated by the DNO (other than following an instruction from NGC);
(c) Demand reduction instructed by NGC;
(d) automatic low frequency Demand disconnection;
(e) emergency manual Demand disconnection.

Demand Control Notification Level

The level above which the DNO has to notify NGC of its proposed or achieved use of Demand Control which is 12 MW in England and Wales and 5 MW in Scotland.

Detailed Planning Data (DPD)

Detailed additional data which the DNO requires under the Distribution Planning and Connection Code in support of Standard Planning Data.

Distribution Business

The authorised business of the DNO or any affiliate or related undertaking of the DNO (whether the business is undertaken by the DNO or another licence holder), comprising:
(a) the distribution of electricity through the DNO’s Distribution System, including any business in providing connections to such System; and
(b) the provision of Distributor Metering and Data Services as defined in the Distribution Licence.

Distribution Code

A code required to be prepared by a DNO pursuant to condition 9 (Distribution Code) of a Distribution Licence and approved by the Authority as revised from time to time with the approval of, or by the direction of, the Authority.

Distribution Code Review Panel or Panel

The standing body established under the Distribution Glossary and Definitions.

Distribution Data Registration Code

That portion of the Distribution Code which is identified as the Distribution Data Registration Code.

Distribution General Conditions or DGC

That portion of the Distribution Code which is identified as the Distribution Glossary and Definitions.

Distribution Glossary and Definitions

That portion of the Distribution Code which is identified as the Distribution Glossary and Definitions.

Distribution Introduction (DIN)

That portion of the Distribution Code which is identified as the Distribution Introduction.

Distribution Licence

A distribution licence granted under Section 6(1)(c) of the Act.

Distribution Network Operator (DNO)

The person or legal entity named in Part 1 of the Distribution Licence and any permitted legal assigns or successors in title of the named party.

</tr>
</tbody>
</table>
| **GB Transmission System Demand** | **The amount of electricity supplied from the Grid Supply Points plus:-
— that supplied by Embedded Large Power Stations, and
• that supplied by Embedded Transmission Systems, and
• exports from the GB Transmission System across External Interconnections, and
• GB Transmission System losses, and, for the purposes of this definition, includes the Demand taken by Station Transformers and Pumped Storage Units.
(Notes: Offshore Demand will only include that from Offshore Power Stations)** |
| **Generating Plant** | **A Power Station including any Generation Set therein.** |
| **Generating Plant Output** | **That portion of the output of Generating Plant which is contributing to meeting Demand.** |
| **Generation Set** | **Any Apparatus which produces electricity.** |
## DISTRIBUTION GLOSSARY AND DEFINITIONS (DGD)

**Generator**
A person who generates electricity under licence or exemption under the Act.

A person who has connected a **Generation Set(s)** in accordance with Item 14 DGD Engineering Recommendation G83/1-1 ("Recommendations For The Connection Of Small-Scale Embedded Generators (Up To 16 A Per Phase) in Parallel With Public Low-Voltage Distribution Networks") and where this is (are) their only **Generation Set(s)**, is not classed as a **Generator** for the purpose of this **Distribution Code**.

**Great Britain or GB**
Has the meaning set out in Schedule 1 of NGC’s **Transmission Licence**—“The landmass of England & Wales and Scotland, including internal waters”.

**Grid Code**
The code which NGC is required to prepare under its **Transmission Licence** and have approved by the Authority as from time to time revised with the approval of, or by the direction of, the Authority.

**Grid Supply Point**
Any point at which electricity is delivered from the **GB Transmission System—National Electricity Transmission System** to the DNO’s Distribution System.

**High Voltage (HV)**
A voltage exceeding 1000 Volts.

**High Voltage Customer**
A **Customer** connected to a part of the **Distribution System** which is operating at **HV**.

**Implementing Control Person**
Pursuant to DOC8, the person implementing **Safety Precautions** at an Operational Boundary.

**Individual DNO Standard**
A standard adopted by an individual **DNO** and which is published as such by an individual **DNO** and that has a material effect on **Users**.

**IEC**
International Electrotechnical Commission.

**Independent Distribution Network Operator**
A **DNO** that does not have a Distribution Services Obligation Area in its **Distribution Licence** and is not an ex Public Electricity Supplier

**Industry Codes Technical Group (ITCG)**
A a standing body comprised of representatives of all the **DNOs** to carry out the functions referred to in its own Constitution and Rules

**Isolated**
Disconnected from associated **Plant** and **Apparatus** by an **Isolating Device(s)** in the isolating position or by adequate physical separation or sufficient gap.

**Isolating Device**
A device for rendering **Plant** and **Apparatus Isolated**.

**Joint System Incident**
Is an **Event** occurring on the **System** or installation, which, in the opinion of the **DNO**, has or may have a serious and/or widespread effect on the **System** or installation of another.
Large Power Station  A **Power Station** which is connected to a **System** notionally connected to a **Grid Supply Point** in;
   a. **NGC’s Transmission Area** with a **Registered Capacity** of 100 MW or more;
   b. **SP Transmission Limited’s Transmission Area** with a **Registered Capacity** of 30MW or more;
   c. **Scottish Hydro-Electric Transmission Limited’s Transmission Area** with a **Registered Capacity** of 10MW or more.

Limited Frequency Sensitive Mode  A **mode** whereby the operation of a **Generation Set** is **Frequency** insensitive except when the **System Frequency** exceeds 50.4Hz, from which point **Limited High Frequency Response** must be provided.

Limited High Frequency Response  A response of a **Generation Set** to an increase in **System Frequency** above 50.4Hz leading to a reduction in **Active Power** in accordance with the provisions of **Grid Code BC3.7.2**.

Load Managed Area  Has the meaning given to that term in the **Distribution Use of System Agreement**.

Low Voltage or LV  In relation to alternating current, a voltage exceeding 50 volts but not exceeding 1 000 volts.

Maximum Generation  The additional output obtainable from **Generating Plant** in excess of **Registered Capacity**.

Medium Power Station  A **Power Station** which is connected to a **System** notionally connected to a **Grid Supply Point** in **NGC’s Transmission Area** with a **Registered Capacity** of 50 MW or more but less than 100 MW.

For the avoidance of doubt an installation comprising one or more **DC Converters** with an aggregate capacity of between 50 and 100MW will be classed as a Medium Power Station for the purposes of this Distribution Code.

Meter Operation Code of Practice Agreement  The agreement of that name, as amended from time to time.

Meter Operator  A person, registered with the **Registration Authority**, appointed by either a **Supplier** or **Customer** to provide electricity meter operation services. (This **Distribution Code** does not place any direct obligation on **Meter Operators** other than through the appointment by either a **Supplier** or a **Customer**.)

Minimum Generation  The minimum output which a **Generation Set** can reasonably generate as registered under the **Distribution Data Registration Code**,

<tr>
<td><strong>Ownership Boundary</strong></td>
<td>The electrical boundary between the <strong>Equipment</strong> owned by one <strong>DNO</strong> or <strong>User</strong> and the <strong>Equipment</strong> owned by another <strong>User</strong>.</td>
</tr>
<tr>
<td><strong>Partial Shutdown</strong></td>
<td>The same as a <strong>Total Shutdown</strong> except that all generation has ceased in a separated part of the <strong>Total System</strong> and there is no electricity supply from <strong>External Interconnections</strong> or other parts of <strong>Total System</strong> to that part of the <strong>Total System</strong> and, therefore, that part of the <strong>Total System</strong> is shutdown with the result that it is not possible for that part of the <strong>Total System</strong> to begin to function again without <strong>NGC’s directions</strong> relating to a <strong>Black Start</strong>.</td>
</tr>
<tr>
<td><strong>Peak Demand</strong></td>
<td>The highest level of <strong>Demand</strong> recorded/forecast for a 12-month period, as specified in the relevant sections of the <strong>Distribution Code</strong>.</td>
</tr>
<tr>
<td><strong>Phase (Voltage) Unbalance</strong></td>
<td>The ratio (in percent) between the rms values of the negative sequence component and the positive sequence component of the voltage.</td>
</tr>
<tr>
<td><strong>Planned Outage</strong></td>
<td>An outage of <strong>Generating Plant</strong> or of part of the <strong>GB National Electricity Transmission System</strong> or of part of a <strong>Distribution System</strong>.</td>
</tr>
</tbody>
</table>
Plant  Fixed and movable items used in the generation and/or supply and/or transmission of electricity other than Apparatus.

Power Factor  The ratio of Active Power to apparent power (apparent power being the product of voltage and alternating current measured in volt-amperes and standard multiples thereof, ie VA, kVA, MVA).

Power Island  Generation Sets at an isolated Power Station, together with complementary local Demand. In Scotland a Power Island may include more than one Power Station.

Power Station  An installation comprising one or more Generation Sets (even where sited separately) and/or controlled by the same Generator and which may reasonably be considered as being managed as one Power Station.

Preliminary Project Planning Data  Data relating to a proposed User Development at the time the User applies for a Connection Agreement but before an offer is made.

Programming Phase  The period between the Operational Planning Phase and the Control Phase. It starts at the 8 weeks ahead stage and finishes at 17:00 on the day ahead of real time.

Protection  The provisions for detecting abnormal conditions in a System and initiating fault clearance or actuating signals or indications.

Qualifying Standard  Electrical standards in use by DNOs and included in the Distribution Code Review Panel’s governance procedures, and falling into one of the categories below:

i. Annex 1 Standard
ii. Appendix 2 Standard
iii. Individual DNO Standard

Reactive Power  The product of voltage and current and the sine of the phase angle between them which is normally measured in kilovar (kVAr) or megavar (MVAr).

Registered Capacity  The normal full load capacity of a Generation Set as declared by the Generator less the MW consumed when producing the same. For a Customer With Own Generation this will relate to the level of output he expects to export to the DNO’s Distribution System.

Registered Data  Data referred to in the schedules to the Distribution Data Registration Code.
**Remote Transmission Assets.**

Any **Plant** and **Apparatus** or meters owned by NGC which:

a) are **Embedded** in the **DNO’s Distribution System** and which are not directly connected by **Plant** and/or **Apparatus** owned by NGC to a sub-station owned by NGC; and

b) are by agreement between NGC and the **DNO** operated under the direction and control of the **DNO**.

<tr>
<td>Standard Planning Data</td>
<td>General information required by the DNO under the Distribution Planning Code.</td>
</tr>
<tr>
<td>(SPD)</td>
<td>Standby</td>
</tr>
<tr>
<td></td>
<td>The supply of electricity by a Supplier to a Customer on a periodic or intermittent basis to make good any shortfall between the Customer’s total supply requirements and that met by his own generation.</td>
</tr>
<tr>
<td>Superimposed Signals</td>
<td>Those electrical signals present on a Distribution System for the purposes of information transfer.</td>
</tr>
<tr>
<td>Supplier</td>
<td>(a) A person supplying electricity under an Electricity Supply Licence; or</td>
</tr>
<tr>
<td></td>
<td>(b) A person supplying electricity under exemption under the Act; in each case acting in its capacity as a supplier of electricity to Customers in Great Britain.</td>
</tr>
<tr>
<td>Supply Agreement</td>
<td>An agreement for the supply of electricity made between a Supplier and a consumer of electricity.</td>
</tr>
<tr>
<td>System</td>
<td>An electrical network running at various voltages.</td>
</tr>
<tr>
<td>System Control</td>
<td>The administrative and other arrangements established to maintain as far as possible the proper safety and security of the System.</td>
</tr>
<tr>
<td>System Incident Centre</td>
<td>A centre set up by the DNO pursuant to the declaration of a Joint System Incident, under DOC 9, to assume control of the incident.</td>
</tr>
<tr>
<td>System Stability</td>
<td>The state of the System whereby predicted changes in load and generation can be accommodated without any detrimental effect on the System.</td>
</tr>
<tr>
<td>System Test</td>
<td>That test or tests which involve simulating conditions or the controlled application of irregular, unusual or extreme conditions on the Total System or any part of it, but not including routine testing, commissioning or recommissioning tests.</td>
</tr>
</tbody>
</table>
Test Coordinator: A suitably qualified person appointed to coordinate System Test pursuant to DOC12.

Test Panel: A panel, the composition of which is detailed in DOC12, and which will be responsible for formulating System Test proposals and submitting a test programme.

Top - Up: The supply of electricity by any Supplier to the Customer on a continuing or regular basis to make good any shortfall between the Customer’s total supply requirements and that met from other sources.

Total Shutdown: The situation existing when all generation has ceased and there is no electricity supply from External Interconnections and therefore the Total System has shutdown with the result that it is not possible for the Total System to begin to function again without NGC’s directions relating to a Black Start.

Transmission Licence: The licence granted under Section 6(1)(b) of the Act.

Transmission Licensee: Means Any Onshore Transmission Licensee or Offshore Transmission Licensee—the holder for the time being of a Transmission Licence.

Transmission System: Has the same meaning as the term "licensee's transmission system” in the Transmission Licence of a Transmission Licensee.

Unmetered Supply: A supply of electricity to premises which is not, for the purposes of calculating charges for electricity supplied to the Customer at such premises, measured by metering equipment.

User: A term used in various sections of the Distribution Code to refer to the persons using the DNO’s Distribution System, more particularly identified in each section of the Distribution Code, including for the avoidance of doubt the OTSO for Embedded Transmission System, but excluding a Transmission Licensee in its capacity as such.

User Development: Either a User's Plant and/or Apparatus and/or System to be connected to the DNO’s Distribution System, or a modification relating to a User's Plant and/or Apparatus and/or System already connected to the DNO’s Distribution System, or a proposed new connection or modification to the connection within the User's System.
Voltage Reduction
The method to temporarily control Demand by reduction of System voltage.

Weekly Average Cold Spell (ACS) Condition
That particular combination of weather elements that gives rise to a level of Peak Demand within a week, taken to commence on a Monday and end on a Sunday, which has a particular chance of being exceeded as a result of weather variation alone. This particular chance is determined such that the combined probabilities of Demand in all weeks of the year exceeding the annual Peak Demand under Annual ACS Conditions is 50%, and in the week of maximum risk the weekly Peak Demand under Weekly ACS Conditions is equal to the annual Peak Demand under Annual ACS Conditions.

DGD 2. CONSTRUCTION OF REFERENCES

In this Distribution Code:

(i) The Table of contents, the Guide and headings are inserted for convenience only and shall be ignored in construing the Distribution Code.

(ii) Unless the context otherwise requires, all references to a particular paragraph, sub-paragraph, Annex, Appendix or Schedule shall be a reference to that paragraph, sub-paragraph, Annex, Appendix or Schedule in or to that part of the Distribution Code in which the reference is made.

(iii) Unless the context otherwise requires the singular shall include the plural and vice versa, references to any gender shall include any individual, body corporate, unincorporated association, firm or partnership and any other legal entity.

(iv) References to the words “include” or “including” are to be construed without limitation to the generality of the preceding words.

(v) Unless there is something in the subject matter or the context which is inconsistent therewith, any reference to an Act of Parliament or any Section of or Schedule to, or other provision of an Act of Parliament shall be construed at the particular time, as including a reference to any modification, extension or re-enactment thereof then in force and to all instruments, orders and regulations then in force and made or deriving validity from the relevant Act of Parliament.

(vi) References to “in writing” or “written” include typewriting, printing, lithography and other modes of reproducing words in a legible and non-transitory form and, except where otherwise stated, includes suitable means of electronic transfer, such as electronic mail. In all cases the form of notification and the nominated persons or departments and addresses of the sender and recipient of the data or information shall be agreed by the DNO and User and the sender shall be able to confirm receipt of the information by the recipient. In the case of electronic transfer the sender and recipient shall be able to reproduce the information in non-transitory form.
(vii) Where the Distribution Glossary and Definitions refers to any word or term which is more particularly defined in a part of the Distribution Code, the definition in that part of the Distribution Code will prevail over the definition in the Distribution Glossary and Definitions in the event of any inconsistency.

(viii) A cross reference to another document or part of the Distribution Code shall not of itself impose any additional or further or co-existent right in the part of the text where such cross-reference is contained.

(ix) Nothing in the Distribution Code is intended to or shall derogate from the DNO’s statutory or licence obligations.
ANNEX 1

(This Annex forms part of the Distribution Code technical requirements)

Distribution Glossary and Definitions

1 Engineering Recommendation G5/4-1
Planning levels for harmonic voltage distortion and the connection of non-linear equipment to transmission and distribution systems in the United Kingdom.

2 Engineering Recommendation G12/3
Requirements for the application of protective multiple earthing to low voltage networks.

3 Engineering Recommendation G59/1
Recommendation for the connection of private generating plant to the Public Electricity Suppliers’ distribution systems.

4 Engineering Recommendation G75/1
Recommendations for the connection of embedded generating plant to public distribution systems above 20kV or with outputs over 5MW.

5 (a) Engineering Recommendation P2/6
Security of Supply.
(b) EM7907
Distribution planning standards of voltage and of security of supply. (Parts of Scottish Hydro Electric Power Distribution Ltd Area)

6 Engineering Recommendation P14
Preferred switchgear ratings.

7 Engineering Recommendation P24
AC traction supplies to British Rail.

8 Engineering Recommendation P25
The short circuit characteristics of electricity boards low voltage distribution networks and the co-ordination of overcurrent protective devices on 230V single phase supplies up to 100A.

9 Engineering Recommendation P26/1
The estimation of the maximum prospective short circuit current for three phase 415V supplies.

10 Engineering Recommendation P28
Planning limits for voltage fluctuations caused by industrial, commercial and domestic equipment in the United Kingdom.
ANNEX 1

11 **Engineering Recommendation P29**
Planning limits for voltage unbalance in the United Kingdom for 132kV and below.

12 **Technical Specification 41-24**
Guidance for the design, installation, testing and maintenance of main earthing systems in substations

13 **Engineering Recommendation S34**
A guide for assessing the rise of earth potential at substation sites.

14 **Engineering Recommendation G83/1-1**
Recommendations For The Connection Of Small-Scale Embedded Generators (Up To 16 A Per Phase) In Parallel With Public Low-Voltage Distribution Networks.
DISTRIBUTION CODE INTRODUCTION (DIN)
DISTRIBUTION INTRODUCTION (DIN)

DIN1 INTERPRETATION

DIN1.1 This Distribution Code has been prepared by the DNOs. Words and expressions printed in bold type are listed in the Distribution Glossary and Definitions.

DIN1.2 The DNO, unless indicated otherwise, shall be construed as acting in its Distribution Business capacity.

DIN2 DISTRIBUTION LICENCE DUTY

DIN2.1 The Distribution Licence (Condition 9) requires the DNO in consultation with Authorised Electricity Operators liable to be materially affected thereby to prepare and at all times have in force and implement and comply with a Distribution Code which:

(a) Covers all material technical aspects relating to connections to and the operation and use of the DNO’s Distribution System and the operation of electric lines and electrical Plant and Apparatus connected to the DNO’s Distribution System. The Distribution System of any Other Authorised Distributor shall comply with the Distribution Code at the point of connection with the DNO’s Distribution System.

(b) Is designed so as to:

(i) Permit the development, maintenance, and operation of an efficient, coordinated and economical System for the distribution of electricity.

(ii) Facilitate competition in the generation and supply of electricity.

DIN2.2 The Distribution Code is in the same form for all Users of the same category. In drawing up and implementing the Distribution Code, the Distribution Licence requires that the DNO shall not discriminate against or prefer:

(a) any one or any group of persons, or

(b) the DNO in the conduct of any business other than the Distribution Business, in favour of or against any one other or any other group of persons.

DIN2.3 It is also a requirement of the Distribution Licence that the DNO shall comply with the provisions of the Grid Code so far as applicable to the licensed business, and the Distribution Code is designed to ensure that these obligations can be met by the DNO.

DIN3 SCOPE

The Distribution Code shall be complied with by the DNO and by potential and existing Generators, Suppliers and Customers connected to or seeking connection to the DNO’s Distribution System being referred to as Users as expressly defined in the various parts of the Distribution Code.
DISTRIBUTION INTRODUCTION (DIN)

DIN4 GENERAL REQUIREMENTS

DIN4.1 The Distribution Code contains procedures to permit equitable management of day to day technical situations in the Electricity Supply Industry, taking account of a wide range of operational conditions likely to be encountered under both normal and exceptional circumstances. It is nevertheless necessary to recognise that the Distribution Code cannot predict and address all possible operational situations. Users must therefore understand and accept that the DNO, in such unforeseen circumstances, will be required, in the course of the reasonable and prudent discharge of its responsibilities, to act in pursuance of any one or any combination of the following “General Requirements”:

(a) The need to preserve or restore the integrity of the DNO’s Distribution System or the GB-National Electricity Transmission System.

(b) The compliance by the DNO with its Distribution Licence obligations.

(c) The compliance by others with obligations imposed by Licences issued under the Act.

(d) The avoidance of breakdown, separation or collapse (total or partial) of the DNO’s Distribution System or the GB-National Electricity Transmission System or the Total System.

(e) The preservation of safety under all circumstances, including the prevention of personal injury.

(f) The prevention of damage to Plant and/or Apparatus.

(g) The achievement of objectives specifically identified in the Distribution Code.

(h) The compliance by the DNO with the Grid Code.

(i) In the absence of an applicable provision of the Distribution Code or any of these General Requirements:

(ii) The application of a policy aimed at the equitable sharing amongst User of any temporary restriction that might be necessary in exceptional circumstances, and

(iii) The application of then current industry practice.

DIN4.2 Users shall provide such reasonable co-operation and assistance as the DNO may reasonably request in pursuance of the above General Requirements.

DIN5 CODE RESPONSIBILITIES

DIN5.1 The Distribution Code sets out procedures and principles governing the DNO’s relationship with all Users of the DNO’s Distribution System.
DISTRIBUTION INTRODUCTION (DIN)

DIN5.2 The **DNO** and all **Users** have a duty under this **Distribution Code** to provide such information and resources as are necessary to facilitate compliance with and implementation of the **Distribution Code**. The **DNO** can only plan and operate the **DNO’s Distribution System** and provide information for the planning and operation of the **GB-National Electricity Transmission System**, having regard to the requirements which **Users** have informed the **DNO** they wish to make of the **DNO’s Distribution System**. The **DNO** must be able to rely upon the information which **Users** have supplied to it and will not be held responsible for any consequences which arise from its reasonable and prudent actions on the basis of such information supplied by any **User** or **Users**.

DIN6 CONFIDENTIALITY

The **Distribution Code** contains procedures under which the **DNO’s Distribution Business**, in pursuance of its obligation as a **DNO**, will receive information from **Users** relating to the intentions of such **Users**. The **DNO** shall not, except in pursuance of specific requirements of the **Distribution Code**, disclose such information to any **User** or other person without the prior written consent of the provider of the information, subject to the requirements of the **Distribution Licence** (Condition 39).

DIN7 PUBLICATIONS

The **Distribution Code** contains references to various Electricity Supply Industry publications which provide guidance on planning and design criteria. A list of the publications referred to is included as an Annex 1 to the **Distribution Code**.
DISTRIBUTION GENERAL CONDITIONS (DGC)
DISTRIBUTION GENERAL CONDITIONS (DGC)

DGC1 INTRODUCTION

The Distribution Glossary and Definitions apply to all provisions of the Distribution Code. Their objective is to ensure, to the extent possible, that various sections of the Distribution Code work together and work in practice for the benefit of all Users.

DGC2 SCOPE

The Distribution Glossary and Definitions apply to the DNO and to all Users.

DGC3 UNFORESEEN CIRCUMSTANCES

If circumstances not envisaged by the provisions of the Distribution Code should arise, the DNO shall, to the extent reasonably practicable in the circumstances, consult promptly and in good faith with all affected Users in an effort to reach agreement as to what should be done. If agreement between the DNO and those Users cannot be reached in the time available, the DNO shall determine what is to be done.

Wherever the DNO makes a determination, it shall do so having regard, wherever possible, to the views expressed by Users and, in any event, to what is reasonable in all the circumstances. Each User shall comply with all instructions given to it by the DNO following such a determination provided that the instructions are consistent with the then current technical parameters of the particular User’s System registered under the Distribution Code. The DNO shall promptly refer all such unforeseen circumstances and any such determination to the Distribution Code Review Panel for consideration in accordance with DGC4.2(e).

DGC4 THE DISTRIBUTION CODE REVIEW PANEL

DGC4.1 The DNOs shall establish and maintain the Panel, which shall be a standing body, to carry out the functions referred to in paragraph DGC4.2.

DGC4.2 The Panel shall:-

(a) Keep the Distribution Code and its working under review, including any necessary requirements for maintaining variations for Scotland and England and Wales;

(b) to minimize the necessary differences in the treatment of issues in Scotland from their treatment in England and Wales;

(c) review all suggestions for amendments to the Distribution Code which the Authority or any User may wish to submit to a DNO for consideration by the Panel from time to time;

(d) publish recommendations as to amendments to the Distribution Code that a DNO or the Panel feels are necessary or desirable and the reasons for the recommendations;

(e) issue guidance in relation to the Distribution Code and its implementation, performance and interpretation when asked to do so by any User; and

[28] [date]December 2008
DISTRIBUTION GENERAL CONDITIONS (DGC)

(f) consider what changes are necessary to the Distribution Code arising out of any unforeseen circumstances referred to it by the DNO under DGC3.

(g) produce an Annual Report of the activities of the Panel; and

(h) establish and maintain governance arrangements for Qualifying Standards that have a material effect on Users of the Distribution System as follows:

(1) national electricity industry standards that implement Distribution Code requirements, and which are listed in Annex 1 of the Distribution Code and form part of the Distribution Code;

(2) other national electricity industry standards that have a material affect on Users but do not implement Distribution Code requirements and which do not form part of the Distribution Code technical requirements. The Panel will maintain a list of these standards. For convenience this list is attached as Appendix 2 to the Guide to the Distribution Code; and

(3) standards adopted by individual DNOs, which are published as such by those DNOs and which have a material effect on Users;

(i) maintain a detailed procedure for the overall governance arrangements for Qualifying Standards, which shall be agreed by resolution of the Panel from time to time; and

(j) have regard for commercial matters insofar as they interact with the Distribution Code and take into account the commercial implications of Distribution Code provisions when developing modifications to the Distribution Code and Annex 1 Standard and Appendix 2 Standard. However the Panel shall not be required to discuss issues relating solely to commercial matters.

DGC4.3 The Panel shall consist of:-

(a) A Chairman and up to 5 members appointed by the ITCG, at least one of whom will be a member of the Grid Code Review Panel and at least one of whom will be an Independent Distribution Network Operator;

(b) a person appointed by the Authority;

(c) the following members:

   (i) 2 persons representing onshore Generators with Embedded Generating Plant who are BM Participants and are active (ie submitting bid-offer data) in the Balancing Mechanism;

   (ii) 2 persons representing onshore Generators with Embedded Generating Plant other than those in (i) above; and

   (iii) 2 persons, other than Supplier, representing Users without Generating Plant;

   (iv) a person representing the OTSO;

   (v) a person representing Suppliers; and

**DISTRIBUTION GENERAL CONDITIONS (DGC)**

(d) A person representing customers appointed by the NCC.

Each of the above shall be appointed pursuant to the rules issued pursuant to DGC4.4.

DGC4.4 The Panel shall establish and comply at all times with its own Constitution and Rules and procedures relating to the conduct of its business, which Constitution Rules and procedures shall be approved by the Authority and are set out in the “Constitution and Rules of the Distribution Code Review Panel”.

DGC4.5 The DNO shall consult all Authorised Electricity Operators liable to be affected in relation to all proposed amendments to the Distribution Code and shall submit all proposed amendments to the Distribution Code to the Panel for discussion prior to such consultation.

DGC4.6 The DNOs shall establish and maintain a group to be known as the ITCG, which shall be a standing body comprised of representatives of the DNOs to carry out the functions referred to in its own constitution and rules.

DGC4.7 The ITCG shall establish and comply at all times with its own constitution and rules relating to the conduct of its business, which constitution and rules shall be approved by the Authority.

DGC4.8 The DNOs shall fund and share the costs incurred by or on behalf of the DNOs in relation to the operation of the Panel and the ITCG in accordance with the cost apportionment mechanism set out in the constitution and rules of the ITCG.

**DGC5 COMMUNICATION BETWEEN THE DNO AND USERS**

Unless otherwise specified in the Distribution Code, the methods of operational communication (other than relating to the submission of data and notices) shall be agreed between the DNO and User from time to time. The DNO shall operate an enquiry service for dealing with incidents on the DNO’s Distribution System and interruptions in supply.

**DGC6 DATA AND NOTICES**

DGC6.1 Data and notices to be exchanged between the DNO and User under the Distribution Code (other than data which is the subject of a specific requirement of the Distribution Code as to the manner of its delivery) shall be delivered in writing in accordance with DGD2 (vi).

DGC6.2 All data items, where applicable, will be referenced to nominal voltage and Frequency unless otherwise stated.

**DGC7 OWNERSHIP OF PLANT AND/OR APPARATUS**

References in the Distribution Code to Plant and/or Apparatus of a User include Plant and/or Apparatus used by a User under an agreement with a third party.
DISTRIBUTION GENERAL CONDITIONS (DGC)

DGC8 SYSTEM CONTROL

Where a User’s System (or part thereof) is, by agreement, under the control of the DNO, then for the purposes of communication and co-ordination in operational timescales the DNO can (for those purposes only) treat that User’s System (or part thereof) as part of the DNO’s Distribution System but as between the DNO and Users, it shall remain to be treated as the User’s System (or part thereof).

DGC9 EMERGENCY SITUATIONS

Users should note that the provisions of the Distribution Code may be suspended in whole or in part during a Security Period as more particularly provided for in the Fuel Security Code, or in accordance with a Civil Emergency Direction issued under a Civil Emergency in accordance with Distribution Operating Code DOC9.

DGC10 DISTRIBUTION CODE RESPONSIBILITIES

The Distribution Code sets out procedures and principles governing the relationship between the DNO and all Users of the DNO’s Distribution System.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)
DPC1 GENERAL INTRODUCTION

DPC1.1 The Distribution Planning and Connection Code specifies the technical and design criteria and the procedures to be applied by the DNO in the planning and development of the DNO’s Distribution System and to be taken into account by Users, as defined in DPC3 below, in the planning and development of their own Systems insofar as the latter affect the operation and use of the DNO’s Distribution System. Developments on the DNO’s Distribution System may have an impact on the National Electricity Transmission System GB Transmission System and this will be taken into account in the planning and development of the DNO’s Distribution System and the conditions of the Grid Code complied with as appropriate.

DPC1.2 This Distribution Planning and Connection Code also specifies the technical, design and operational criteria which must be complied with by the Users, defined in DPC3 below connected to, or seeking connection to the DNO’s Distribution System, in the planning and development of their Systems in so far as they affect the DNO’s Distribution System.

DPC1.3 A requirement for reinforcement or extension of the DNO’s Distribution System or the National Electricity Transmission System GB Transmission System may arise due to the requirements of a User or for a number of other reasons including, but not limited to:

(a) A development on a User’s System already connected to the DNO’s Distribution System as a User Development.

(b) The introduction of a new Connection Point between a User’s System and the DNO’s Distribution System.

(c) Transient, or steady state stability considerations.

(d) The development of an existing, or the connection of a new Customer.

(e) The cumulative effect of any combination of the above.

DPC1.4 Accordingly, the reinforcement or extension of the DNO’s Distribution System or the National Electricity Transmission System GB Transmission System may involve work:

(a) At the Connection Point between a User’s System and the DNO’s Distribution System.

(b) On distribution or transmission lines or substations or other facilities which join the Connection Point to the remainder of the DNO’s Distribution System or the National Electricity Transmission System GB Transmission System.

(c) At or between points on the DNO’s Distribution System remote from the Connection Point.
The time required for the planning and development of the DNO’s Distribution System and any consequential requirement of the DNO’s interface with the National Electricity Transmission System will depend on the type and extent of the necessary reinforcement and/or extension work, the need or otherwise to obtain statutory or other consents by all parties, the associated possibility for a public inquiry and the degree of complexity in undertaking the new work whilst maintaining satisfactory security and quality of supply on the DNO’s Distribution System. The Distribution Licence imposes appropriate timescales on the exchange of information between the DNO and Users.

**Planning Data**

**Standard Planning Data**

Standard Planning Data is that data first to be provided by a User at the time of an application for a Connection Agreement. It comprises data, which is expected normally to be sufficient for the DNO to investigate the impact on the DNO’s Distribution System of any User Development associated with an application by the User for a Connection Agreement. The DNO will inform Users where more detailed information is required.

**Detailed Planning Data**

Detailed Planning Data comprises additional, more detailed, data not normally expected to be required by the DNO to investigate the impact on the DNO’s Distribution System of any User Development associated with an application by the User for a Connection Agreement. The User may, however, be required by the DNO to provide the Detailed Planning Data before the DNO can make an offer for a Connection Agreement. The DNO shall only request Detailed Planning Data where it considers the provision of such data to be necessary and in such cases the DNO shall specify which elements of Detailed Planning Data are required.

**Standard Planning Data** and **Detailed Planning Data** requirements are specified for different User Developments of different types in DPC5 and DPC7 of this Distribution Planning and Connection Code and summarised in the Distribution Data Registration Code.

**Estimated Data**

Where data is not available at the feasibility stage or preliminary stage of a User Development then the User may provide a reasonable estimate of the data to be requested by the DNO and in such cases the data shall be identified as estimated data by the User. Estimated data supplied by Users in pursuance of this Distribution Planning and Connection Code should, where practicable, be replaced by actual validated values prior to connection.

**Assumed Data**

Where data is not available or has not been provided by the User at the feasibility stage or preliminary stage of a User Development then the DNO may make reasonable assumptions of the data required for assessment of the User.
**Development** and in such cases the **User** shall be notified of the assumed values adopted. Where the **DNO** has notified the **User** that assumed data has been adopted by the **DNO** in pursuance of this **Distribution Planning and Connection Code** then the **User** should, where practicable provide actual validated values to replace the assumed values prior to connection.

**DPC1.7 Status of Planning Data**

It is in the interests of all **Users** to initiate early discussion with the **DNO** regarding any proposed **User Development**, which may have an impact on the **DNO’s Distribution System**.

For the purposes of this **Distribution Planning and Connection Code** it is considered that development will consist of four stages:

(a) Feasibility Project Stage

At this optional stage the **User** will be considering a **User Development**. The **DNO** will be pleased to conduct a short meeting to discuss the **User’s** requirements and provide guidance on the likely implications for the **DNO’s Distribution System**.

If at this stage the **User** requires further information then the **DNO** will request **Standard Planning Data** from the **User** and provide a feasibility assessment identifying items of significant cost to the extent permitted by the information provided by the **User**. In accordance with the **DNO’s Statement of Charges** a charge will be payable by any potential **User** for such an assessment.

At the feasibility project stage a number of iterative studies may be carried out by the **DNO** at the request of the **User** (or by the **User**) to identify opportunities for connection and corresponding costs and technical issues. The **Feasibility Project Data** requested by the **DNO** from the **User** to carry out these feasibility studies may include both **Standard Planning Data** and **Detailed Planning Data** depending on the complexity of the assessment studies required to be carried out by the **DNO**.

(b) Preliminary Project Stage

At this stage the **User** will have submitted an application for a **Connection Agreement**. The **Preliminary Project Planning Data** requested by the **DNO** from the **User** for assessing the connection and costs may include both **Standard Planning Data** and **Detailed Planning Data**.

c) Committed Project Stage

At this stage a **Connection Agreement** will have been established. The **Committed Project Planning Data** on which the **Connection Agreement** is based may include both **Standard Planning Data** and **Detailed Planning Data**.

(d) Registered Project Stage

At this stage the connection will be physically established. The **Registered Data** for the connection shall include replacements for estimated and assumed...
values, where practicable, using validated actual values and updated forecasts for future data items.

DPC1.8 Reference is made in the Distribution Planning and Connection Code to the DNO supplying information or advice to Users. For the avoidance of doubt, unless the context otherwise requires, such information or advice will be furnished by the DNO upon request by the User (whether during the application for connection process or otherwise).

DPC1.9 The provisions of the Distribution Planning and Connection Code shall, subject to DPC1.8, be applicable to:

(a) All existing connections as at the date of commencement of DNO’s Distribution Licence.

(b) All new or modified connections thereafter.

DPC1.10 In considering the approval of existing connections at the date of commencement of its Distribution Licence, the DNO shall have regard to the fact that previous changes in technical and design standards have not been applied retrospectively in every case, and the DNO shall not seek, under the terms of these Distribution Planning and Connection Code Conditions, to impose retrospective changes where these had not been required in the past, except where the DNO can reasonably demonstrate that significant change has occurred to conditions which existed when the matter was previously considered by the DNO or its predecessors.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

DISTRIBUTION PLANNING AND CONNECTION CODE 2

DPC2 OBJECTIVES

The objectives of the Distribution Planning and Connection Code are to:-

(a) Enable the DNO’s Distribution System to be planned, designed and constructed to operate economically, securely and safely.

(b) Facilitate the use of the DNO’s Distribution System by others and to specify a standard of supply to be provided.

(c) Establish technical conditions which facilitate the interfacing of Systems at points of entry to and exit from the DNO’s Distribution System.

(d) Formalise the exchange of System planning data.

(e) Provide sufficient information for a User to assess opportunities for connection and to plan and develop his System such as to be compatible with the DNO’s Distribution System.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

DISTRIBUTION PLANNING AND CONNECTION CODE 3

DPC3 SCOPE

DPC3.1 The Distribution Planning and Connection Code specifies the planning, design and connection requirements for Distribution Systems owned by the DNO and for connections to those Systems.

DPC3.2 The Users to whom the Distribution Planning and Connection Code applies are those who use or intend to use the DNO’s Distribution System and comprise the following:-

(a) Embedded Generators.

(b) Suppliers.

(c) Customers including those with Unmetered Supplies who are connected to the DNO’s Distribution System.

(d) Other Authorised Distributors connected to the DNO’s Distribution System.

(e) Meter Operators which perform services in respect of Equipment connected to the DNO’s Distribution System.
DPC4 DESIGN PRINCIPLES AND STANDARDS

DPC4.1 Introduction

DPC4.1.1 Planning criteria are based on the requirement to comply with statutory requirements, Distribution Licence conditions and other obligations placed on the DNO and Users.

DPC4.1.2 The DNO has a duty to develop and maintain an efficient, secure and co-ordinated System of electricity supply that is both economical and safe.

DPC4.1.3 DPC4 sets out current principles and standards to be applied in the design of the DNO’s Distribution System and any User connections to that System. Each scheme for reinforcement or modification of the DNO’s Distribution System is individually designed in the light of economic and technical features associated with the particular System limitations under consideration.

DPC4.1.4 Nothing in DPC4 is intended to inhibit design innovation. DPC4 is, therefore, based upon the performance requirements of the DNO’s Distribution System necessary to meet the above criteria.

DPC4.1.5 The technical and design criteria applied in the planning and development of the DNO’s Distribution System are listed in Annex 1 to the Distribution Code. These standards may be subject to revision from time to time in accordance with the provision of the Distribution Licence.

DPC4.2 Standard of Supply

DPC4.2.1 Security

In accordance with the Condition 5 of the Distribution Licence, DNOs shall plan and develop their DNO’s Distribution Systems to a standard not less than that set out in DGD Annex 1 Item 5, Engineering Recommendation P2/6 – “Security of Supply” or such other standard of planning as DNOs may, with the approval of the Authority, adopt from time to time.

In accordance with the Distribution Licence Scottish Hydro Electric Power Distribution Ltd shall plan and develop its DNO’s Distribution System in Scotland to a standard set out in EM7907. Engineering Recommendation P2/6 – “Security of Supply” has been modified by Scottish Hydro Electric Power Distribution Ltd as EM7907 and this is accepted by the Authority.

DPC4.2.2 Frequency and Voltage

DPC4.2.2.1 The DNO’s Distribution System and any User connections to that System shall be designed to enable the Normal Operating Frequency and voltages supplied to Customers to comply with the ESQCR.

DPC4.2.2.2 The Frequency of the DNO’s Distribution System shall be nominally 50 Hz and shall normally be controlled within the limits of 49.5 - 50.5 Hz in accordance with principles outlined in the ESQCR.
DPC4.2.3 In exceptional circumstances, System Frequency could rise to values of the order of 52 Hz or fall to values of the order of 47 Hz. Sustained operation outwith the range 47 - 52 Hz is not taken into account in the design of Plant and Apparatus.

DPC4.2.4 Any extension or connection to the DNO’s Distribution System shall be designed in such a way that it does not adversely affect the voltage control employed on the DNO’s Distribution System. Information on the voltage regulation and control arrangements will be made available by the DNO if requested by the User.

DPC4.2.5 Voltage Disturbances and Harmonic Distortion

Distortion of the System voltage waveform, caused by certain types of Equipment, may result in annoyance to Users of the DNO’s Distribution System or damage to connected Apparatus. In order to limit these effects the following shall apply to Users’ loads connected to the DNO’s Distribution System:

(a) Voltage fluctuations shall comply with the limits set out in DGD Annex 1, Item 10 Engineering Recommendation P28, “Planning limits for voltage fluctuations caused by industrial, commercial and domestic equipment in the United Kingdom”.

(b) The harmonic content of a load shall comply with the limits set out in DGD Annex 1, Item 1 Engineering Recommendation G5/4-1, “Planning levels for harmonic voltage distortion and the connection of non-linear equipment to transmission and distribution systems in the United Kingdom.”

(c) Phase (Voltage) Unbalance shall comply with the levels laid down in DGD Annex 1, Item 11 Engineering Recommendation P29, “Planning limits for voltage unbalance in the United Kingdom for 132kV and below”.

(d) Traction supplies shall comply as appropriate with the requirements of DGD Annex 1, Item 7. Engineering Recommendation P24 “A.C. traction supplies to British Rail”.

Under certain circumstances the DNO may agree to other limits or levels.

Under fault and circuit switching conditions the rated frequency component of voltage may fall or rise transiently. The fall or rise in voltage will be affected by the method of earthing of the neutral point of the DNO’s Distribution System and voltage may fall transiently to zero at the point of fault. Sections 2 and 3 of BS EN 50160:1995 ‘Voltage Characteristics of Electricity Supplied by Public Distribution Systems’, as amended from time to time, contain additional details of the variations and disturbances to the voltage which shall be taken into account in selecting Equipment from an appropriate specification for installation on or connected to the System.

DPC4.2.4 Auto-reclosing and Single Phase Protection Operation

In connecting to the DNO’s Distribution System the User should be aware that auto-reclosing or sequential switching features may be in use on the DNO’s Distribution System. The DNO will on request provide details of the auto-reclosing or sequential switching features in order that the User may take this into account in the design of the User System, including Protection arrangements.
Users should be aware that the Protection arrangements on some Distribution Systems may cause disconnection of one phase or two phases only of a three phase supply for certain types of fault.

DPC4.3 Design Principles

This section sets out design principles for Users (excluding Generators, the OTSO and Users with Unmetered Supply), connected at Low Voltage and having single phase or three phase supplies protected by fuse(s) or other device(s) rated at 100 amps or less.

DPC4.3.1 Any User’s installation which complies with the provisions of the Requirements of Electrical Installations BS 7671: 1992 (incorporating Amendment No1. 1994 (AMD 8536)) as amended from time to time, shall be deemed to comply with the requirements of the Distribution Code as regards design and safety.

DPC4.3.2 On the request of a User the DNO will provide such information, as may be reasonably required, on the design and other characteristics of the DNO’s Distribution System.

Guidance on the short circuit characteristics of the Low Voltage System and associated supplies is provided in Electricity Supply Industry engineering publications, including Items 8 and 9 in Annex 1 Engineering Recommendation P25, “The short circuit characteristics of electricity board’s low voltage distribution networks and the co-ordination of overcurrent protective devices on 230V Single Phase supplies up to 100 Amps”, and Engineering Recommendation P26/1, “The estimation of the maximum prospective short circuit current for three phase 415V supplies”.

Design practice for protective multiple earthing is detailed in the Electricity Supply Industry engineering publications (including Item 2 in Annex 1 Engineering Recommendation G12/3, “Application of protective multiple earthing to low voltage networks”) and in the references contained in those publications.

The DNO’s information requirements are detailed in DPC5.2.1.

DPC4.4 Design Principles for all other Users not included in DPC4.3

DPC4.4.1 Specification of Equipment, Overhead Lines and Underground Cables

(a) The principles of design, manufacture, testing and installation of distribution Equipment, overhead lines and underground cables, including quality requirements, shall conform to applicable statutory obligations and shall comply with relevant CENELEC standards, IEC publications, European and British Standards. Further advice will be made available upon request to the DNO.
(b) The documents specified in paragraph (a) contain options for purchaser selection which together with other requirements that are necessary to meet System design needs, shall be specified so as to provide performances and ratings in line with Electricity Supply Industry (ESI) Technical Specifications (some of which are published as Electricity Supply Industry (ESI) Standards), British Electricity Board Specifications, Engineering Recommendations and Area Chief Engineers (ACE) Reports and Engineering Technical Reports and Electricity Supply Industry (ESI) documents as listed in Annex 1 of the Distribution Code or such other specifications as the DNO may adopt from time to time by agreement with the Authority.

(c) The specifications of Equipment, overhead lines and cables shall be such as to permit Operation of the DNO's Distribution System within the Safety Management System of the DNO, details of which will be made available by the DNO upon request.

(d) Equipment shall be suitable for use at the operating Frequency, within the intended operating voltage range and at the design short-circuit rating of the DNO’s Distribution System to which it is connected having due regard to fault carrying capabilities and making and breaking duties. In appropriate circumstances, details of the System to which connection is to be made will be provided by the DNO. Guidance on the short circuit characteristics of the three phase Low Voltage system and associated supplies is provided in Electricity Supply Industry engineering publications, including Item 9 in DGD Annex 1 Engineering Recommendation P26/1, “The estimation of the maximum prospective short circuit current for three phase 415V supplies”.

(e) Cables, overhead lines transformers and other Equipment shall be operated within the thermal rating conditions contained in the appropriate standards, specifications, and other relevant publications, taking into account the intended use. Such information will be made available by the DNO upon request.

(f) The standards, publications and specifications referred to in paragraphs (a) to (e) above are such standards, publications and specifications current at the time that the Plant and/or Apparatus was manufactured (and not commissioned) in the case of Plant and/or Apparatus on the Total System, or awaiting use or re-use. If any such Plant/Apparatus is subsequently moved to a new location or used in a different way, or for a different purpose, or is otherwise modified then such standards, publications and specifications current at the time that the Plant and/or Apparatus was manufactured (and not commissioned) will apply provided that in applying such standards, publications and specifications the Plant and/or Apparatus is reasonably fit for its intended purpose having due regard to the obligations of the DNO and the User under their respective licences.
DPC4.4.2 Earthing

(a) The arrangements for connecting the DNO’s Distribution System with earth shall be designed to comply with the requirements of the ESQCR and relevant European and British Standards. Guidance as to the design of earthing systems is contained in Electricity Supply Industry (ESI) engineering publications, including Items 12, and 13 in DGD Annex 1 Technical Specification 41-24, “Guidance for the design, installation, testing and maintenance of main earthing systems in substations” and Engineering Recommendation S.34, “A guide for assessing the rise of earth potential at substation sites”.

(b) The method of earthing of the DNO’s Distribution System, for example, whether it is connected solidly to earth or through an impedance, shall be advised by the DNO. The specification of associated Equipment shall meet the voltages which will be imposed on the Equipment as a result of the method of earthing.

(c) Design practice for protective multiple earthing is detailed in the Electricity Supply Industry (ESI) engineering publications including Item 2 DGD Annex 1 Engineering Recommendation G12/3, “Application of protective multiple earthing to low voltage networks”, and in the references contained in those publications.

(d) Users shall take precautions to limit the occurrence and effects of circulating currents in respect of the neutral points of any interconnected system (eg where there is more than one source of energy.)

DPC4.4.3 Voltage Regulation and Control

Any extension or connection to the DNO’s Distribution System shall be designed in such a way that it does not adversely affect the voltage control employed by the DNO’s Distribution System. Information on the voltage regulation and control arrangements will be made available by the DNO if requested by the User.

DPC4.4.4 Protection

(a) The DNO’s Distribution System and the System of any User connected to the DNO’s Distribution System shall incorporate protective devices in accordance with the requirements of the ESQCR.

(b) In order to ensure satisfactory operation of the DNO’s Distribution System, Protection systems, operating times, discrimination, and sensitivity at the Ownership Boundary shall be agreed between the DNO and the User during the application for connection process, and may be reviewed from time to time by the DNO, with the concurrence of the User.

(c) In order to cover a circuit breaker, or Equipment having a similar function, failing to operate correctly to interrupt fault current on a HV System, back-up protection by operation of other circuit breakers or Equipment having a similar function must normally be provided. The DNO will advise the User if the same is not required. If the Equipment providing the back-up protection is owned by the DNO, then this Protection may be limited to that needed to meet statutory requirements in respect of the DNO’s Distribution System.
(d) Unless the DNO should advise otherwise, it is not acceptable for Users to limit the fault current infeed to the DNO’s Distribution System by the use of Protection and associated Equipment if the failure of that Protection and associated Equipment to operate as intended in the event of a fault, could cause Equipment owned by the DNO to operate outside its short-circuit rating.

DPC4.4.5 Superimposed Signals

Where Users install mains borne signalling equipment it shall comply with European Standard EN50.065 as amended from time to time. Where a User proposes to use such equipment to superimpose signals on the DNO’s Distribution System, the prior agreement of the DNO is required.

DPC4.5 Network Statements

DPC4.5.1 In accordance with Condition 4 of its Distribution Licence the DNO, on the request of a User, will prepare a statement showing present and future circuit capacity, forecast power flows and loading on the part or parts of the DNO’s Distribution System specified in the request and Fault Levels at each distribution node covered by the request and containing:

a) such further information as shall be reasonably necessary to enable such person to identify and evaluate the opportunities available when connecting to and making use of the part or parts of the licensee’s distribution system specified in the request; and

b) if so requested, a commentary prepared by the licensee indicating the licensee’s views as to the suitability of the part or parts of the licensee’s distribution system specified in the request for new connections and the distribution of further quantities of electricity.

The Distribution Licence sets out conditions on the time scales and charges associated with providing such a statement.

DPC4.5.2 In accordance with Condition 25 of its Distribution Licence the DNO will prepare on the request of the Authority a statement, also known as the Long Term Development Statement. The form and content of this statement will be specified by the Authority and will cover future years on a rolling basis. This statement gives information to assist any person who contemplates entering into distribution arrangements with the DNO to identify and evaluate the opportunities for doing so.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

DISTRIBUTION PLANNING AND CONNECTION CODE 5

DPC5 GENERAL REQUIREMENTS FOR CONNECTION

DPC5.1 Introduction

DPC5.1.1 Distribution Planning and Connection Code (DPC5) ensures that all Users of the DNO’s Distribution System are subject to the same requirements for connection.

DPC5.1.2 Data exchange requirements specified in this Distribution Planning and Connection Code apply to any User Development, which has an impact on the DNO’s Distribution System.

DPC5.1.3 DPC5.2.2 specifies the information required from Users by the DNO in order to ensure that adequate technical provision is made for new supplies or increases in existing load; DPC5.2.2 also applies to Embedded Generators who operate in parallel with the DNO’s Distribution System, where a supply is required from the DNO under normal or emergency conditions. Information required from Embedded Generators, with connections at HV or Low Voltage, in respect of the import of energy to the DNO’s Distribution System, is covered in DPC7. Transfer of Planning Data for Users connected at HV is set out in DPC 8.

DPC5.2 Declaration of Load Characteristics

DPC5.2.1 For supplies at Low Voltage under terms in the Supply Agreement it is possible in most cases to assess whether a proposed connection is acceptable, and to determine the necessary supply arrangements, from analysis of the following limited data:-

(a) Maximum power requirements (kVA or kW);

(b) Type and electrical loading of Equipment to be connected, eg number and size of motors, cookers, showers, space and water electrical heating arrangements, including details of equipment which is subject to switching by the Supplier; and

(c) The date when the connection is required.

These requirements will be specified on the appropriate application for a connection form obtainable from the DNO.

Should a preliminary examination of this data indicate that more detailed information is required then it shall be provided to the DNO upon request if reasonably required.

Users, shall contact the DNO in advance if it is proposed to make any significant change to the connection, electric lines or electrical Equipment, install or operate any generating equipment or do anything else that could affect the DNO’s Distribution System or require alterations to the connection.

Users shall provide the DNO with any information it asks for about the nature, or use by the User, of electrical equipment on the User’s premises (including that specified in DPC5.2.1 (a), (b), and (c) above). The DNO will only ask for information that is needed by it in relation to its Distribution Licence or the Distribution Code or to comply with the ESQCR or the Act.
DPC5.2.2 The provisions of DPC5.2.1 also apply to supplies other than those at *Low Voltage*. It may be necessary for the following more comprehensive information, in addition to that detailed in DPC5.2.1, to be provided on request:-

DPC5.2.2.1 **Standard Planning Data**

It is possible in most cases to assess whether a proposed connection is acceptable, and to determine the necessary supply arrangements, from analysis of the following limited **Planning Data** which will be specified on the appropriate standard application form obtainable from the **DNO**:

(a) Point of Connection to the **DNO’s Distribution System** (geographical and electrical).

(b) The date when connection is required.

(c) Single line diagrams of existing and proposed arrangements of main **Plant** and **Apparatus** showing equipment rating.

(d) Type and electrical loading of equipment to be connected, eg number and size of motors, electrical heating arrangements, etc.

(e) Maximum power requirements MVA.

(f) Maximum **Active Power Demand** (MW).

(g) Maximum and minimum **Reactive Power** requirements (MVAr).

(h) The maximum **Phase (Voltage) Unbalance** which the **User** would expect the **Demand** to impose on the **DNO’s Distribution System**.

(i) The maximum harmonic content which will be imposed on the **DNO’s Distribution System**.

(j) Details of change of **Demand** (Active Power and Reactive Power).

(k) Details of any load management scheme to be applied by the **User** on the **User System**.

(l) **Peak Demand** profiles at the **Exit Point**, both 2 hourly on day of **User’s Peak Demand** and monthly **Peak Demand** variations.

(m) Three phase short circuit infeed from all sources within the **User’s System**, based on **Generation Set** sub-transient reactance and the minimum zero phase sequence impedance of the **User’s System**.

(n) Standard load profiles

Should a preliminary examination of this data indicate that more detailed information is required then it shall be provided to the **DNO** on request.

DPC5.2.2.2 **Detailed Planning Data**

It may be necessary for the **User** in addition to that in DPC5.2.2.1, to provide the following more comprehensive **Detailed Planning Data** on request.

In relation to **Demand**:

(a) Type of load and control arrangements (eg controlled rectifier or large motor drives and type of starter employed).

(b) Maximum load on each phase at the time of **Peak Demand**
(c) Demand profiles (48 x half hour average estimates) for Active and Reactive Power Demand for the day of the Exit Point Peak Demand and for the day of the National Electricity Transmission System GB Transmission System Peak Demand at Annual Average Cold Spell (ACS) Conditions.

In relation to fluctuating loads:

(a) The rates of change of Demand (Active Power and Reactive Power) both increasing and decreasing.

(b) The shortest repetitive time interval between fluctuations in Demand (Active Power and Reactive Power).

(c) The magnitude of the largest step changes in Active Power and Reactive Power, both increasing and decreasing.

In some cases, more detailed information may need to be provided to permit a full assessment of the effect of the User’s load on the DNO’s Distribution System. Such information may include an indication of the pattern of build up of load and a proposed commissioning programme. This information will be specifically requested by the DNO when necessary.

DPC5.2.3 A DNO is only entitled to use any information provided by a User under this Distribution Code for the purpose of fulfilling its obligations in respect of its Distribution System required by the Distribution Licence or the Distribution Code, including operating the procedures for Load Managed Areas and associated Security Restriction Notices specified in the Distribution Use of System Agreement.

DPC5.3 Connection Arrangements

DPC5.3.1 The design of connections between the DNO’s Distribution System and Users shall be in accordance with the principles set out in DPC4, subject to any modification to which the DNO may reasonably consent.

DPC5.3.2 During the application for connection process the DNO will agree with the User the voltage level to which a User will be connected in accordance with its normal practice for the type of load to be supplied. The DNO may on occasion specify a different connection voltage from normal in order to avoid potential disturbance caused by the User’s Apparatus to other Users of the DNO’s Distribution System or for other technical reasons or may agree alternative methods for minimising the effects of disturbing loads.

DPC5.3.3 Before entering into a Connection Agreement and before making a connection to a User at a Connection Point, it will be necessary for the DNO to be reasonably satisfied that the User’s System at the boundary with the DNO’s Distribution System will comply with all appropriate requirements of the Distribution Code.

DPC5.3.4 The User’s installation shall comply with the principles expected in Regulation 25(2)(a) of the ESQCR, or relevant European and British Standard as appropriate.
DPC 5.4 Ownership Boundaries

DPC 5.4.1 The point or points at which supply is given or taken between the DNO’s Distribution System and Users will be agreed between the DNO and the User as required. For supplies at Low Voltage the general rule is that the point of supply will be at the outgoing (ie User’s side) terminals of the item of DNO or Meter Operator owned Apparatus where the transition is made to the User’s tails or other User owned Apparatus. For HV supplies, including connections between the DNO and User, and where necessary busbar connected supplies at Low Voltage, the points of supply will be subject to specific agreement between the parties in each case.

DPC 5.4.2 The respective ownership of Plant or Apparatus will be recorded in a written agreement between the DNO and the User as required. In the absence of a separate agreement between the parties to the contrary, construction, commissioning, control, operation and maintenance responsibilities follow ownership.

DPC 5.4.3 For supplies to Embedded Generators who operate in parallel with the DNO’s Distribution System and all supplies at HV the DNO will with the User’s agreement prepare a Site Responsibility Schedule and, where determined by the DNO during the application for connection process, Operation Diagrams showing the agreed Ownership Boundary.

The Site Responsibility Schedule shall detail the demarcation of responsibility for safety of persons carrying out work or testing at sites having a Connection Point to the DNO’s Distribution System and/or circuits which cross an Ownership Boundary at any point.

More detailed information on procedures and responsibilities involved in the provision of safety at interfaces between the DNO’s Distribution System and a User’s System is set out in Distribution Operating Code DOC8.

Copies of these documents will be retained by the DNO and the User. Changes in the boundary arrangements proposed by either party must be agreed in advance and will be recorded on the DNO Operation Diagrams.
DISTRIBUTION PLANNING AND CONNECTION CODE 6

DPC6 TECHNICAL REQUIREMENTS FOR CONNECTIONS

DPC6.1 Introduction

Distribution Planning and Connection Code DPC6 specifies the technical arrangements required at the Ownership Boundary between the DNO’s Distribution System and the System of the User and is applicable at all voltage levels, but excludes Users (including those with Unmetered Supplies) connected at Low Voltage, without Generation, and protected by fuse(s) or other device(s) rated at 100 amps or less.

DPC6.2 Equipment at the Ownership Boundary

All Equipment at the Ownership Boundary shall meet the design principles contained within DPC4.4.1. Connections for entry to and exit from the DNO’s Distribution System shall incorporate a means of disconnection of the User’s installation by the DNO.

DPC6.3 Protection Requirements

Protection requirements vary widely depending on established practices and the needs of the particular DNO’s Distribution System. The basic requirement in all cases is that Users’ arrangements for Protection at the Ownership Boundary, including types of Equipment and Protection settings, must be compatible with standards and practices on the DNO’s Distribution System, maintaining necessary operating times, sensitivity, discrimination and co-ordination, as specified by the DNO during the application for connection process and which may be reviewed from time to time and complied with by the User.

In particular:-

(a) Maximum fault clearance times (from fault current inception to arc extinction) must be within the limits established by the DNO in accordance with Protection and Equipment short circuit rating policy adopted for the DNO’s Distribution System.

(b) In connecting to the DNO’s Distribution System the User should be aware that auto-reclosing or sequential switching features may be in use on the DNO’s Distribution System. The DNO will on request provide details of the auto-reclosing or sequential switching features in order that the User may take this into account in the design of the User System, including Protection arrangements.

(c) Users should also be aware that the Protection arrangements on some DNO’s Distribution Systems may cause disconnection of one phase or two phases only of a three phase supply for certain types of fault.

DPC6.4 Earthing

Earthing of that part of the User’s System that is connected to the DNO’s Distribution System shall comply with the arrangements specified in DPC4.
DPC6.5 Fault Level Considerations

DPC6.5.1 The short circuit rating of User’s Equipment at the Connection Point should be not less than the design Fault Level of the DNO’s Distribution System to which it is connected. The choice of Equipment for connection at Low Voltage may take into account attenuation in the service lines as specified in DGD Annex 1, Items 8 and 9, Engineering Recommendation P25, “The short circuit characteristics of electricity board’s low voltage distribution networks and the co-ordination of overcurrent protective devices on 230V single phase supplies up to 100 Amps” and Engineering Recommendation P26/1, “The estimation of the maximum prospective short circuit current for three phase 415V supplies”. The DNO in the design of its System will take into account the contribution to Fault Level of the User’s connected System and Apparatus.

DPC6.5.2 In order to permit these assessments to be carried out information should be exchanged on prospective fault power infed and X/R ratios where appropriate at points of entry to and exit from the DNO’s Distribution System.

DPC6.6 Capacitive and Inductive Effects

The User shall, when applying to make a connection, provide the DNO with information as detailed in DPC8. Details will be required of capacitor banks and reactors connected at HV which could affect the DNO’s Distribution System and which it is proposed to connect if agreed by the DNO. When requested by the DNO details shall also be provided of distributed circuit capacitance and inductance. Sufficient detail is required for the following:-

(a) To verify that controlling Equipment of the DNO’s Distribution System is suitably rated.

(b) To show that the performance of the DNO’s Distribution System will not be impaired.

(c) To ensure that arc suppression coils when used by the DNO for System earthing purposes are correctly installed and operated.

DPC6.7 Communications and Telemetry Equipment

DPC6.7.1 Where required by the DNO in order to ensure control of the DNO’s Distribution System, communications between Users and the DNO shall be established in accordance with the following. Users shall provide and maintain those parts of the communications equipment within their location. Provision of any necessary communications requirements shall be in accordance with the Connection Agreement for a specific connection.

DPC6.7.2 Primary Speech Facility

Users at their own cost shall provide and maintain equipment approved by the DNO by means of which routine and emergency communications may be established between the User and the DNO.

Connection to the DNO’s corporate telephone network and any circuit or circuits required to connect the Users with the point of connections shall be provided in accordance with the Connection Agreement.
The facilities to be provided by the connection and the signalling and logical requirements for the interface between the Users equipment and the connection to the DNO’s corporate telephone network will be specified in the Connection Agreement.

DPC6.7.3 Telemetry

The User shall provide such voltage, current, frequency, Active Power and Reactive Power pulses and outputs and status points from his System as are considered reasonable by the DNO to ensure adequate System monitoring. The telemetry outstation in such a situation will be provided, installed and maintained by the DNO.

DPC6.7.4 Telecontrol Outstation

If it is agreed between the parties that the DNO shall control the switchgear on the User’s System, the DNO shall install the necessary telecontrol outstation. Notwithstanding the above, it shall be the responsibility of the User to provide the necessary control interface for the switchgear of the User which is to be controlled.

DPC6.7.5 Instructor Facilities

Where required by the DNO, the User shall provide accommodation for special instructor facilities specified by DNO for the receipt of operational messages.

DPC6.7.6 Data Entry Terminals

The User shall accommodate the DNO’s data entry terminals for the purpose of information exchange.

DPC6.7.7 System Monitoring

Monitoring equipment is provided on the DNO’s Distribution System to enable the DNO to monitor dynamic performance conditions. Under the requirements of the Grid Code, Generation Sets and Power Stations will need to provide signals for monitoring purposes. Where this monitoring equipment requires input signals from the User’s side of the DNO/User Ownership Boundary, the User shall be responsible for the provision of suitable signals in accordance with the Connection Agreement.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

DISTRIBUTION PLANNING AND CONNECTION CODE 7

DPC7 REQUIREMENTS FOR EMBEDDED GENERATORS

DPC7.1 Introduction

DPC7.1.1 This Distribution Planning and Connection Code DPC7 is applicable to all existing or prospective Embedded Generators (and in DPC7 references to “Embedded Generator” shall be construed accordingly) including a Customer With Own Generation and Other Authorised Distributors, having Generating Plant operating or capable of operating in parallel with the DNO’s Distribution System. It is recognised that some existing Embedded Generators may not comply at present with all of the requirements of this section and in such cases the DNO will advise the relevant Embedded Generator which requirements are necessary for the Operation of the DNO’s Distribution System.

DPC7.1.2 In addition to meeting the requirements of DPC7, Embedded Generators will need to meet the requirements of other relevant sections of the Distribution Code.

DPC7.1.3 For the avoidance of doubt a User who has installed a Generation Set in accordance with Item 14 DGD Annex 1 Engineering Recommendation G83/1-1 (“Recommendations For The Connection Of Small-Scale Embedded Generators (Up To 16 A Per Phase) in Parallel With Public Low-Voltage Distribution Networks”) and where this is (are) their only Generation Set(s), and which has been installed, commissioned and operated in accordance with Annex 1, Item 14, that User shall not be required to comply with the requirements of DPC7 in respect of that (those) Generation Set.

DPC7.2 General Requirements

Embedded Generators connected at or below 20kV and with an output not in excess of 5MW shall, as a minimum requirement, comply with the requirements of Item 3, DGD Annex 1 Engineering Recommendation G59/1, “Recommendations for the connection of private generating plant to the Public Electricity Suppliers’ distribution systems”.

Embedded Generators connected at a higher voltage or of a larger capacity shall comply with the general principles of Item 4, DGD Annex 1 Engineering Recommendation G75/1 “Recommendations for The Connection of embedded generating plant to public distribution systems above 20kV or with outputs over 5MW”, subject to the particular requirements of the DNO necessitated by the adjacent DNO’s Distribution System conditions, which will be made known by the DNO during the connection application process DPC7.3 “Provision of Information”.

DPC7.3 Provision of Information

Embedded Generators, can have a significant effect on the DNO’s Distribution System and as a result its Users. To enable the DNO to assess the impact Embedded Generating Plant or an Embedded Transmission System will have on the DNO’s Distribution System, the Embedded Generator will be required to supply information to the DNO.
Embedded Generators will fall within three basic classes for which the following minimum information shall be provided to the DNO by the Embedded Generator during the connection application process or otherwise as requested by the DNO:-

Relevant Sections:

(a) **Power Station** and site data for all Embedded Generators excluding the OTSO. DPC7.3.1 and Schedule 5a of the DDRC

(b) **Generation Set** data for all Embedded Generating Plant connected at a voltage level of 20kV or below or with a capacity less than 5MW (Item 3, DGD Annex 1)

(c) **Generation Set** data for specified types of Embedded Generating Plant connected at a voltage level of 20kV or below or with a capacity less than 5MW (Item 3, DGD Annex 1)

   5c(i) Synchronous generators

   5c(ii) Fixed speed induction generators

   DPC7.3.2 and Column 3 of Schedules 5b of the DDRC

(d) **Generation Set** data for all Embedded Generating Plant connected at a voltage level greater than 20kV or with a capacity greater than 5MW and up to 30 MW in Scotland and 50MW in England and Wales (Item 4, DGD Annex 1)

(e) **Generation Set** data for specified types of Embedded Generating Plant connected at a voltage level greater than 20kV or with a capacity greater than 5MW and up to 30 MW in Scotland and 50MW in England and Wales (Item 4, DGD Annex 1)

   5c(i) Synchronous generators

   5c(ii) Fixed speed induction generators

   DPC7.3.2 and Column 4 of Schedules 5b of the DDRC

(f) **Generation Set** data for specified types of Embedded Generating Plant connected at a voltage level greater than 20kV or with a capacity greater than 5MW and up to 30 MW in Scotland and 50MW in England and Wales (Item 4, DGD Annex 1)

   5c(iii) Double fed induction generators

   5c(iv) Converter connected generators

   DPC7.3.2 and Schedules 5c(iii) and 5c(iv) of the DDRC

(g) Transformers associated with Power Station and Generation Sets DPC7.3.2 and Schedule 5c(v) of the DDRC

(h) **Power Station** data and Generation Set data for all Embedded Generating Plant in excess of 5 MW for Scottish Hydro Electric Power Distribution Ltd, 30 MW for SP Distribution Ltd and 50MW in England and Wales (Item 4, DGD Annex 1)

   DPC7.3.1, DPC7.3.2 and DPC7.3.3

(i) **Embedded Transmission System** data DPC7.3.1, DPC7.3.2 and
When applying for connection to the DNO’s Distribution System Embedded Generators shall also refer to DPC5.

The DNO will use the information provided to model the DNO’s Distribution System and to decide what method of connection will need to be employed and the voltage level to which the connection should be made. If the DNO reasonably concludes that the nature of the proposed connection or changes to an existing connection requires more detailed consideration then further information may be requested. It is unlikely that more information than that specified in DPC7.3.1 will be required for Embedded Generators who are to be connected at Low Voltage and have less than 50kVA in capacity, or connected at other than Low Voltage and have less than 300kVA in capacity.

DPC7.3.1 Information Required from all Embedded Generators

It will be necessary for each Embedded Generator to provide to the DNO information on physical and electrical characteristics of the Power Station and site as a whole as set out in Schedules 5a or 5e of the Distribution Data Registration Code before entering into an agreement to connect any Generating Plant or an Embedded Transmission System onto the DNO’s Distribution System:

(a) Details of the proposed connection point (geographical and electrical) and connection voltage.

(b) The number and types of generators and the total capacity of the power station and auxiliary supplies under various operating conditions.

(c) Sketches of System Layout:
   Operation Diagrams showing the electrical circuitry of the existing and proposed main features within the User’s System and showing as appropriate busbar arrangements, phasing arrangements, earthing arrangements, switching facilities and operating voltages.

(d) Interface Arrangements
   (i) The means of synchronisation between the DNO and User;
   (ii) Details of arrangements for connecting with earth that part of the Embedded Generator’s System directly connected to the DNO’s Distribution System.
   (iii) The means of connection and disconnection which are to be employed.
   (iv) Precautions to be taken to ensure the continuance of safe conditions should any earthed neutral point of the Embedded Generator’s System operated at HV become disconnected from earth.
More or less detailed information than that contained above might need to be provided, subject to the type and size of generation or the point at which connection is to be made to the DNO’s Distribution System. This information will need to be provided by the Embedded Generator at the reasonable request of the DNO.

DPC 7.3.2 Additional Generation Set and Plant and Equipment Data Required from Embedded Generators.

This section details the technical and design information requirements for Embedded Generators covered by:

(a) Embedded Generators connected at a voltage level of 20kV or below or with a capacity less than 5MW, Item 3 of Annex 1

(b) Embedded Generators connected at a voltage level greater than 20kV or with a capacity greater than 5MW and up to 30 MW in Scotland and 50MW in England and Wales (Item 4 Annex 1).

The Standard Planning Data and Detailed Planning Data specified in Schedule 5b and Schedule 5c (or Schedule 5e for the OTSO) of the Distribution Data Registration Code may be requested by the DNO from the User before entering into an agreement to connect any Generating Plant or Embedded Transmission System onto the DNO’s Distribution System.

The information specified in Schedule 5b of the Distribution Data Registration Code includes generic data for all Embedded Generation Sets.

The information specified in Schedule 5c of the Distribution Data Registration Code includes the electrical parameters of individual Generation Sets and associated plant such as transformers, power factor correction equipment. The information required is classified as Standard Planning Data and Detailed Planning Data for each of the following categories of Embedded Generation Set:

(i) Synchronous generators
(ii) Fixed speed induction generators
(iii) Doubly fed induction generators
(iv) Series converter connected generators.
(v) Transformers

Under certain circumstances either more or less detailed information than that specified above might need to be provided and will be made available by the Embedded Generator at the request of the DNO.

DPC 7.3.3 Extra Information From Embedded Generators to be Provided to Meet Grid Code Requirements

DPC 7.3.3(a) The DNO has an obligation under PC3.3 of the Grid Code to submit certain planning data relating to Embedded Medium Power Stations to NGC. The relevant data requirements of the Grid Code are also listed in PC3.3 of the Grid Code. It is incumbent on Embedded Medium Power Stations to provide this data listed in PC3.3 of the Grid Code to the DNO.
DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

Where a Generator in respect of an Embedded Power Station is a party to the CUSC this DPC 7.3.3 will not apply.

DPC7.3.3(b) In addition to supplying the DNO with details of Embedded Generating Plant there is a requirement to provide information to NGC where it has been specifically requested by NGC in the circumstances provided for under the Grid Code.

DPC7.3.4 Information Provided by the DNO to Users

In accordance with Condition 4 and Condition 25 of its Distribution Licence the DNO is required to provide certain information to Users so that they have the opportunity to identify and evaluate opportunities to connect to the DNO’s Distribution System as set out in DPC4.5. Comprehensive information on the DNO’s Distribution System operating at 33kV and above is made available to Users through the Long Term Development Statements provided under Condition 25 of the Distribution Licence. Schedule 5d of the Distribution Data Registration Code is indicative of the type of network data the DNOs is required to provide to Users for identifying opportunities for connection of generation at voltages below 33kV. On the production of Schedule 5d data for a User, the DNO will update any relevant data that would otherwise be provided from the Long Term Development Statement.

DPC7.4 Technical Requirements

DPC7.4.1 Generating Plant Performance Requirements

For Embedded Generating Plant, which does not constitute or contain BM Units that are active (ie submitting bid-offer data) in the Balancing Mechanism, the electrical parameters required to be achieved at the Generation Set terminals are defined according to the connection method and will be specified by the DNO with the offer for connection. A Generation Set or Power Station must be capable of supplying its Registered Capacity within the System Frequency range 49.5 to 50.5 Hz. The output power should not be affected by voltage changes in the permitted operating range.

Embedded Medium Power Stations additionally have to comply with DPC 7.5.

DPC7.4.2 Control Arrangements

The DNO will specify in writing if a continuously acting fast response automatic excitation control system is required to control the Generation Set voltage without instability over the entire operating range of the Generation Set or Power Station. This will be dependent on the size and type of Generating Plant or Power Station and the adjacent part of the DNO’s Distribution System to which it is connected.

DPC7.4.3 Co-ordinating with Existing Protection

It will be necessary for the Protection associated with Embedded Generating Plant and any Embedded Transmission System to co-ordinate with the Protection associated with the DNO’s Distribution System as follows:-

[date]December 2008
(a) For Generating Plant and any Embedded Transmission System directly connected to the DNO’s Distribution System the Embedded Generator must meet the target clearance times for fault current interchange with the DNO’s Distribution System in order to reduce to a minimum the impact on the DNO’s Distribution System of faults on circuits owned by Embedded Generators or on an Embedded Transmission System. The DNO will ensure that the DNO Protection settings meet its own target clearance times. The target clearance times are measured from fault current inception to arc extinction and will be specified by the DNO to meet the requirements of the relevant part of the Distribution System.

(b) The settings of any Protection controlling a circuit breaker or the operating values of any automatic switching device at any point of connection with the DNO’s Distribution System shall be agreed between the DNO and the User in writing during the connection consultation process. The Protection settings or operating values shall not be changed without the express agreement of the DNO.

(c) It will be necessary for the Generating Plant Protection and Embedded Transmission System Protection to co-ordinate with any auto-reclose policy specified by the DNO.

DPC7.4.4 Phase Voltage Unbalance

Any Generation Set or Power Station connected to the DNO’s Distribution System will be required to withstand, without tripping, the Phase (Voltage) Unbalance imposed during the clearance of a close-up phase-to-phase fault by System back-up Protection which will be within the Plant short time rating on the DNO’s Distribution System. The DNO will advise the Embedded Generator of the expected Phase Voltage Unbalance during the Connection Agreement process.

DPC7.4.5 Neutral Earthing

The winding configuration and method of earthing connection shall be agreed with the DNO.

DPC7.4.6 Frequency Sensitive Relays (Islanding)

It is conceivable that a part of the DNO’s Distribution System, to which Embedded Generators are connected can, during emergency conditions, become detached from the rest of the System. It will be necessary for the DNO to decide, dependent on local network conditions, if it is desirable for the Embedded Generators to continue to generate onto the islanded DNO’s Distribution System.

If no facilities exist for the subsequent resynchronisation with the rest of the DNO’s Distribution System then the Embedded Generator will under DNO instruction, ensure that the Generating Plant and/or Embedded Transmission System is disconnected for re-synchronisation.
Under emergency conditions there is an expectation that some generation will continue to operate outside the statutory frequency limits. However, for Embedded Generators connected to the DNO’s Distribution System at a voltage level less than 132kV it is likely that this could mean connection within an automatic low frequency load disconnection zone. Consequently, Embedded Generators should ensure that all Protection on Generating Plant should have settings to co-ordinate with those on the automatic low frequency load disconnection equipment which will be detailed by the DNO on request of the User.

DPC7.4.7 Black Start Capability

The National Electricity Transmission System (GB Transmission System) will be equipped with Black Start Stations (in accordance with the Distribution Operating Code DOC 9). It will be necessary for each Embedded Generator to notify the DNO if its Generating Plant has a restart capability without connection to an external power supply, unless the Embedded Generator shall have previously notified NGC accordingly under the Grid Code. Such generation may be registered by NGC as a Black Start Station.

DPC7.4.8 Generating Plant Commissioning Tests

Where Generating Plant or an Embedded Transmisison System requires connection to the DNO’s Distribution System in advance of the commissioning date, for the purposes of testing, the Embedded Generator must comply with the requirements of the Connection Agreement. The Embedded Generator shall provide the DNO with a commissioning programme, approved by the DNO if reasonable in the circumstances, to allow commissioning tests to be co-ordinated.

DPC7.5 Technical Requirements for Medium Power Stations

DPC7.5.1 Where a Generator in respect of an Embedded Power Station is a party to the CUSC this DPC 7.5 will not apply.

DPC7.5.2 In addition to the requirements in DPC7.4, the DNO has an obligation under CC 3.3 of the Grid Code to ensure that all relevant Grid Code Connection Condition requirements are met by Medium Power Stations. These requirements are summarised in CC 3.4 of the Grid Code. It is incumbent on Medium Power Stations to comply with the relevant Grid Code requirements listed in CC 3.4 of the Grid Code as part of compliance with this Distribution Code. Note that a DC Converter installation of capacity greater than 50MW and less than 100MW is considered to be a Medium Power Station for the purposes of Grid Code compliance in this Distribution Code.

DPC7.5.3 Where data is required by NGC from Medium Power Stations, nothing in the Grid Code or Distribution Code precludes the Generator from providing the information directly to NGC in accordance with Grid Code requirements. However, a copy of the information should always be provided in parallel to the DNO.

DPC7.5.4 Grid Code Connection Conditions Compliance

DPC7.5.4.1 The technical designs and parameters of the Embedded Medium Power Stations will comply with the relevant Connection Conditions of the Grid Code. A
statement to this effect, stating compliance with OC5.8 of the Grid Code is required to be presented to the DNO, for onward transmission to NGC, before commissioning of the Power Station. Note that the statement might need to be resubmitted post commissioning when assumed values etc have been confirmed.

DPC7.5.4.2 Should the Generator make any material change to such designs or parameters as will have any effect on the statement of compliance referred to in DPC7.5.4.1, the Generator must notify the change to the DNO, as soon as reasonably practicable, who will in turn notify NGC.

DPC7.5.4.3 Tests to ensure Grid Code compliance may be specified by NGC in accordance with the Grid Code. It is the Generator’s responsibility to carry out these tests.

DPC7.5.4.4 Where NGC can reasonably demonstrate that for Total System stability issues the Medium Power Station should be fitted with a power system stabiliser, NGC will notify the DNO who will then require it to be fitted for compliance with this DPC7.5.4.4.

DISTRIBUTION PLANNING AND CONNECTION CODE (DPC)

DISTRIBUTION PLANNING AND CONNECTION CODE 8

DPC8 TRANSFER OF PLANNING DATA

DPC8.1 Introduction

DPC8.1.1 Distribution Planning and Connection Code DPC8 details information to be exchanged between the DNO and Users that are connected at High Voltage including Embedded Generators and Other Authorised Distributors.

It includes data that is necessary in order for the DNO’s Distribution System to be developed in an efficient, co-ordinated and economic manner, and to enable the DNO to comply with the conditions contained in its Distribution Licence.

DPC8.2 Planning Information to be Provided by Users

DPC8.2.1 Prospective and existing Users of the DNO’s Distribution System must provide sufficient planning data/information as can reasonably be made available, when requested by the DNO from time to time to enable the DNO to comply with the requirements under its Distribution Licence. For those Users from whom Demand forecasts are required under DOC1, there will be a requirement to prepare an annual submission to the DNO. This submission, which is to be in accordance with DOC1, should include a development plan covering at least the subsequent 3 years and, where the User holds planning data or information relating to subsequent years up to 7 years ahead that data or information, including changes either increasing or decreasing in Demand, transfer requirements or generating capacity as appropriate.

DPC8.2.2 In addition to periodic updates of planning information a User should give adequate notice of any significant changes to the User’s System or operating regime to enable the DNO to prepare its development plan, budget for, and implement any necessary System modifications. Such information should include any changes either increasing or decreasing in Demand, transfer requirements or generating capacity as appropriate. In the event of unplanned changes in a User’s System or operating regime a User shall notify the DNO as soon as is practically possible to ensure any contingency measures, as necessary, can be implemented by the DNO.

DPC8.2.3 The DNO has an obligation under the CUSC to submit certain planning data/information relating to Existing Offshore Generators to NGC. Any Existing Offshore Generators will be required to cooperate with the DNO to contribute to the full and timely completion of the Offshore Transmission Implementation Plan.

DPC8.3 Information to be Provided to Users

DPC8.3.1 Where the DNO has received from a User any information or data under DPC8.3 or where the DNO proposes to make modifications to the DNO’s Distribution System which, in either case, in the reasonable opinion of the DNO, may have an impact upon the System of any other User, the DNO will notify that User of the proposals subject to any constraints relating to the timing of release of information or confidentiality provisions.

DPC8.4 Reactive Compensation Plant
DPC8.4.1 A User shall provide the DNO with information on any reactive compensation Plant directly or indirectly connected to a DNO's Distribution System, other than at Low Voltage, including:-

(a) The MVAr capacitive or inductive rating of the Equipment and operating range if variable;

(b) Details of any automatic control logic such that the operating characteristics can be determined; and

(c) The point of connection to the DNO’s Distribution System.

DPC8.5 Lumped Network Susceptance

DPC8.5.1 Under certain circumstances it will be necessary for the User to provide, at the request of the DNO, details of the equivalent lumped network susceptance at Normal Frequency of the User's System at nominal Frequency referred back to the connection with the DNO’s Distribution System. This should include any shunt reactors which are an integrated part of a cable system and which are not normally in or out of service independent of the cable (ie. they are regarded as part of the cable).

DPC8.5.2 It should not include:-

(a) Independently switched reactive compensation plant connected to the User’s System (covered in DPC8.4.1)

(b) Any susceptance of the User’s System inherent in the Reactive Power Demand.

DPC8.6 Short Circuit Infeed to the DNO’s Distribution System

DPC8.6.1 Information shall be exchanged between the DNO and the User on fault infeed levels at the point of connection with the DNO’s Distribution System in the form of:-

(a) The maximum and minimum 3-phase symmetrical and phase earth short circuit infeed.

(b) The X/R ratio under short circuit conditions.

(c) In the case of interconnected Systems, adequate equivalent network information.

DPC8.7 Interconnection Impedance

DPC8.7.1 For User interconnections that operate in parallel with the DNO’s Distribution System details of the interconnection impedance shall be exchanged between the DNO and the User. This information shall include an equivalent single impedance (resistance, reactance and shunt susceptance) of the parallel User or DNO’s Distribution System.

DPC8.8 Demand Transfer Capability

DPC8.8.1 Information shall be exchanged on Demand transfer capability where the same Demand may be supplied from alternative DNO or User points of supply. This shall include the proportion of Demand normally fed from each point of supply and the arrangements (manual or automatic) for transfer under planned/fault outage conditions.
DPC8.9 Other Authorised Distributor’s Distribution System Data

DPC8.9.1 Other Authorised Distributors shall provide the DNO with detailed data relating to the interface between their Distribution System and that of the DNO, covering circuit parameters, switchgear and Protection arrangements of equipment directly connected to or affecting the Distribution System to enable the DNO to assess any implications associated with these points of connection. Reciprocal arrangements will apply between the DNO and its Users.

DPC8.10 Transient Overvoltage Effects

DPC8.10.1 For User’s busbars connected to the DNO’s Distribution System sufficient details may need to be exchanged with respect to the User/DNO Ownership Boundary to enable an assessment, where necessary, of transient overvoltage effects to be made. This information may relate to physical and electrical layouts, parameters, specifications and Protection details.

DPC8.11 More Detailed Information

In certain circumstances more detailed information may be needed and will be provided upon the reasonable request of the DNO.
DISTRIBUTION OPERATING CODE (DOC)
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 1

DOC1 DEMAND FORECASTS

DOC1.1 Introduction

DOC1.1.1 In order for the DNO to operate the DNO’s Distribution System efficiently and to ensure maximum System security and System Stability, there is a need for those Users specified in DOC1.3 to provide loading and generation output information to the DNO.

DOC1.1.2 The Grid Code specifies NGC’s requirements for Demand forecasting for Generation Sets which constitute or contain BM Units which are active (ie. submitting bid-offer data) in the Balancing Mechanism. This Distribution Operating Code DOC1 specifies the information to be provided by other Generation Sets and all Users of the DNO’s Distribution System specified in DOC1.3 below.

DOC1.1.3 This Demand forecasting information is required to enable the DNO to maintain the integrity of the DNO’s Distribution System. The Licensee under its Distribution Licence has an obligation under the Grid Code to provide Demand forecast information to NGC in order that generation output can be matched with Demand. The information, required to be provided by Users (specified in DOC1.3 below) under this Distribution Operating Code, will enable the Licensee to comply with these requirements of the Grid Code.

DOC1.1.4 Where Demand data is required from the User, this means the MW Demand of electricity at the DNO point of supply to the User. The DNO may, in certain cases, specify that the Demand data shall include the MVAr Demand.

DOC1.1.5 The information to be provided to the DNO shall be in writing as specified in DGD2 (vi).

DOC1.1.6 In this Distribution Operating Code Year 0 means the current calendar year at anytime, Year 1 means the next calendar year at anytime, Year 2 means the calendar year after Year 1, etc.

DOC1.1.7 References in this Distribution Operating Code to data to be supplied on a half-hourly basis refers to it being supplied for each period of 30 minutes ending on the hour and half-hour in each day.

DOC1.2 Objectives

The objectives of this Distribution Operating Code DOC1 are to:-

(a) Set out the Demand forecast and Embedded Generating Plant Output or Embedded Transmission System output information required to be provided by Users to enable the DNO to operate the DNO’s Distribution System.

(b) Specify the information required to be provided by Users to the DNO to enable it to comply with its obligations under the Grid Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC1.3 Scope

This Distribution Operating Code applies to the following Users of the DNO’s Distribution Systems which are connected at HV:-

(a) Customers with a Demand greater than 5 MW.
(b) Embedded Generators whose output is greater than 1MW where the DNO reasonably considers it appropriate.
(c) Other Authorised Distributors connected to the DNO’s Distribution System.
(d) Suppliers, at the request of the DNO, on behalf of their Customers.

DOC1.4 Information Flow and Co-ordination

DOC1.4.1 Demand Forecast Information

The DNO will co-ordinate all Demand forecast information for each Grid Supply Point to meet the requirements of the Grid Code. The DNO will aggregate forecast information provided by Users, where appropriate, and provide forecast information to NGC where the Demand, or change in Demand, is equal to or greater than the Demand Control Notification Level at any DNO Connection Point.

DOC1.4.2 Generation Output Information

Information relating to Generating Plant Embedded in the DNO’s Distribution System or in the network of an Other Authorised Distributor or any Embedded Transmission System shall—, where specified be provided to the DNO in writing. A Customer With Own Generation may be required to furnish such information should the DNO reasonably consider that it would affect its Demand forecasts.

DOC1.4.3 Information to be Provided by the DNO

Where reference is made to “as specified by the DNO” or “the National Electricity Transmission System GB Transmission System days or times of Peak Demand or minimum Demand”, the DNO will provide each User, from whom Demand forecasts are required, with such information.

DOC1.5 Demand Forecast Data

DOC1.5.1 Planning Periods

Information shall be supplied by Users to the DNO for the following rolling timescales is required by the DNO:-

(a) Operational Planning Phase – next three years ahead
(b) Programming Phase – 24 hours to 8 weeks ahead
(c) Control Phase – 0 to 24 hours ahead

The information supplied will be as specified below and as set out in the Schedules of the Distribution Data Registration Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC1.5.2 Operational Planning Phase (next 3 years ahead).

DOC1.5.2.1 The information required to be provided to the DNO during the Operational Planning Phase is specified in Appendix 1 of this Distribution Operating Code, DOC1.

DOC1.5.2.2 The information shall be provided to the DNO by Calendar week 35 each year.

DOC1.5.3 Programming Phase (24 hours to 8 weeks ahead inclusive).

DOC1.5.3.1 The information required to be provided by the User to the DNO during the Programming Phase is specified in Appendix 2 of this Distribution Operating Code, DOC1.

DOC1.5.3.2 For the period 2 to 8 weeks ahead the information shall be supplied to the DNO by 1600 hours each Friday.

DOC1.5.3.3 For the period 2 to 13 days ahead the information shall be updated and supplied to the DNO by 0900 hours each Wednesday.

DOC1.5.3.4 The DNO may require the information specified in Appendices 1 and 2 of this Distribution Operating Code to be updated if it reasonably considers it necessary and to be supplied to the DNO by 0800 hours each day (or such other time as specified by the DNO from time to time) for the next day (except that it may be for the next 3 days on Fridays and 2 days on Saturdays) and may be longer (as specified by the DNO at least one week in advance) to cover holiday periods.

DOC1.5.4 Control Phase (0 to 24 hours ahead)

The following information shall be supplied to the DNO at reasonable times to be specified by the DNO for the unexpired period covered by the Control Phase:-

(a) Details of any differences of greater than 5MW from the schedules of operation of any Embedded Generating Plant or Embedded Transmission System on a half hourly basis which were supplied under DOC1.5.3.3;

(b) Details from Suppliers of any differences of the amount and duration of their proposed use of Customer Demand Control aggregated to 5MW or more (averaged over any half-hour period) on a half-hourly basis which were supplied under DOC1.5.3.4.

(c) Details from each User connected to the Distribution System of any change in aggregated Demand at the point of supply of greater than 5MW of the Demand.

DOC1.5.5 Post Control Phase

The following shall be supplied to the DNO by 0300 hours each day:-

(a) Details of half-hour Active Power and Reactive Power output sent out to the DNO’s Distribution System by Embedded Generating Plant or any Embedded Transmission System where the DNO reasonably considers it appropriate during the previous day on a half-hourly basis.
(b) Suppliers, and Other Authorised Distributor connected to the DNO’s Distribution System will provide details of the amount and duration of Demand Control at the DNO Connection Point aggregated to 5MW or more (averaged over any half-hour) which was implemented during the previous Operational Day.

**DOC1.6 Forecast Factors**

**DOC1.6.1** The following factors will be taken into account by the DNO and Users when conducting Demand forecasts in the Operational Planning Phase:-

(a) Historic Demand data and trends.

(b) Weather forecasts (responsibility for weather correction of User’s Demand rests with the User.)

(c) Incidence of major events or activities

(d) Embedded Generation Set or Embedded Transmission System Schedules.

(e) Demand transfers.

(f) Interconnection with adjacent Other Authorised Distributors.

(g) Demand Control proposed to be operated by Suppliers.

(h) Any other factor reasonably considered necessary.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 1

DOC 1 - APPENDIX 1

Demand FORECASTS - Operational Planning Phase (3 years ahead)

EACH CALENDAR YEAR BY WEEK 35:

For each of the next 3 years forecast information for:

(a) Half-hour Active Power and Power Factor (or Reactive Power) at Annual ACS Conditions for the specified time of the annual peak half-hour at the associated Grid Supply Points and at the specified time of the National Electricity Transmission System GB Transmission System Peak Demand.

(b) Half-hour Active Power and Power Factor (or Reactive Power) at Average Conditions at the specified half-hour of the National Electricity Transmission System GB Transmission System minimum Demand.

(c) Half-hour Active Power output of Embedded Generating Plant or any Embedded Transmission System at the specified half-hour of the National Electricity Transmission System Demand GB Transmission System Demand.

In addition, where the loading or the generation output of a User may have a particular impact on the security or stability of the System then the DNO may on request require the following information from a User.

(a) Weekly ACS Conditions and Average Conditions Active and Reactive Power Demand at the time of the specified National Electricity Transmission System GB Transmission System Peak Demand each week together with forecasts of Demand to be met and relieved by Embedded Generating Plant Output and planned Demand Control by other Users.

(b) Weekly ACS Conditions Active and Reactive Power Demand at the time of the specified Grid Supply Point Peak Demand each week.

This additional information will, where requested by the DNO, be updated throughout the current year (Year 0) in the Programming Phase, the times to be notified by the DNO where this is necessary.

Where reference is made to “specified” or “National Electricity Transmission System Demand GB Transmission System Demand”, the information will be provided by the DNO following the receipt of information provided by NGC in accordance with OC1 of the Grid Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC 1 - APPENDIX 2

Demand FORECASTS - Programming Phase (24 hours to 8 weeks ahead inclusive)

The following information shall be provided to the **DNO** in the timescales specified in DOC1.5.3:-

(a) Schedules for the operation of **Embedded Generation Set** or any **Embedded Transmission System** whose output is greater than 1MW on a half-hourly basis where the **DNO** reasonably considers it appropriate

(b) From **Suppliers**, details of their proposed use of **Demand Control** measures aggregated to 5MW or more (averaged over any half-hour) on a half hourly basis for each of the **DNO’s Connection Points**;

(c) From **Customers** and **Other Authorised Distributors** connected to the **DNO’s Distribution System** whose operations are likely to result in an aggregated change in **Demand** at the **DNO’s Connection Point** of supply of greater than 5MW of the **Demand** at that time on a half-hourly basis.

(d) Any other relevant **Demand** forecast information reasonably required by the **DNO**.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 2

DOC2 OPERATIONAL PLANNING

DOC2.1 Introduction

DOC2.1.1 Operational Planning within the terms of the Distribution Code comprises the co-ordination through various timescales, of planned outages of Plant and Apparatus which affect the Operation of the DNO’s Distribution System or require the commitment of the DNO’s resources.

DOC2.1.2 This Distribution Operating Code also enables the DNO to meet its Distribution Licence obligation to provide certain information specified in the Grid Code and establishes procedures to enable the collection of such data from Users specified in DOC2.3 below.

DOC2.1.3 Information to be provided to the DNO shall be in writing as specified in DGD2f).

DOC2.1.4 In order for the DNO to fulfil the requirements of this DOC2 it should be noted that the information set out in the Grid Code OC2, to be provided by NGC, will form the basis of Operational Planning under this DOC2.

DOC2.1.5 In this Distribution Operating Code Year 0 means the current calendar year at any time, Year 1 means the next calendar year at any time, Year 2 means the calendar year after Year 1, etc. Where Week 52 is specified read Week 53 in appropriate years.

DOC2.2 Objectives

The objectives of this Distribution Operating Code are:

(a) To set out the DNO’s Operational Planning procedure and a typical timetable for the co-ordination of outage requirements of Plant and Apparatus to be provided by Users to enable the DNO to operate the DNO’s Distribution System.

(b) To specify the information to be provided by Users to the DNO to enable the DNO to comply with its obligations under the Grid Code.

DOC2.3 Scope

This Distribution Operating Code applies to the DNO and the following Users of the DNO’s Distribution System which are connected at HV:-

(a) HV Customers where the DNO considers it appropriate.

(b) Customer With Own Generation where the DNO reasonably considers it appropriate.

(c) Embedded Generating Plant in the DNO’s Distribution System whose Registered Capacity is greater than 1MW and any Embedded Transmission System where the DNO reasonably considers it appropriate.

(d) Any Other Authorised Distributor connected to the DNO’s Distribution System.
DOC2.4 Information Flow and Co-ordination

DOC2.4.1 Embedded Generators

Information relating to Embedded Generating Plant where the DNO reasonably considers it appropriate whose Registered Capacity is greater than 5MW, or 1MW in the case of renewable generating plant in Scotland and Embedded Transmission System shall where reasonably required by the DNO be provided by the User directly to the DNO. This may include a Customer With Own Generation where the DNO considers it appropriate.

DOC2.4.2 Other Plant and Apparatus

Information relating to all Plant and Apparatus connected to the DNO’s Distribution System, or that which may affect its Operation, shall be co-ordinated with the DNO.

DOC2.5 Timescales and Data

DOC2.5.1 Detailed implementation of data gathering and timescales will be agreed between the DNO and each User. Due recognition will be given by the DNO to voltage levels and capacities of Plant and Apparatus when assessing information requirements.

DOC2.5.2 All information shall be provided in Decimal Weeks as a minimum, where Week 1 commences in the first week of January as published from time to time.

DOC2.5.3 The rolling timescales involved in Distribution Operating Code DOC2 are illustrated in Figure 1 of this Distribution Operating Code and are as follows:-

(a) Operational Planning Phase
   Long Term Planning Phase - Calendar year 3 ahead.
   Medium Term - Calendar years 1 and 2 ahead
   Short Term - The current calendar year 52 weeks ahead down to 9 weeks ahead

(b) Programming Phase
   24 hours to 8 weeks ahead inclusive

(c) Control Phase
   0 to 24 hours ahead

DOC2.6 Operational Planning

DOC2.6.1 Long Term Programme (Calendar Year 3 ahead - Appendix 1).

DOC2.6.1.1 Each year, the DNO will prepare a Long Term Programme covering year 3 ahead which will include those Distribution System outages, Embedded Transmission System outages and Embedded Generating Plant outages, where the DNO reasonably considers it appropriate, which may affect the performance of the Total System.
DISTRIBUTION OPERATING CODE (DOC)

DOC2.6.1.2 Users and Embedded Generators where the DNO reasonably considers it appropriate will provide the DNO with information in accordance with Appendix 1. This information will be requested by the DNO in order to satisfy the requirements of DOC2.6.1.1.

DOC2.6.2 Medium Term Programme (Calendar years 1 - 2 ahead Appendix 2)

DOC2.6.2.1 The previous Long Term Programme will be updated to form the basis of the Medium Term Programme. The availability of Embedded Generating Plant and any Embedded Transmission System will also be updated.

DOC2.6.2.2 Users and Embedded Generators will provide the DNO with information in accordance with Appendix 2.

DOC2.6.3 Short Term Programme (Current year 52 weeks ahead down to 9 weeks ahead - Appendix 3).

DOC2.6.3.1 The previous Medium Term Programme will be updated to form the basis of the Short Term Programme. The DNO will continually review this programme as necessary and periodically discuss it with the relevant parties as appropriate.

DOC2.6.3.2 It will take account of such review and discussions and any additional outages and the following further details of each outage proposed will be notified at this stage by the appropriate party:-

(a) Return to service times of circuits (if different from programme).
(b) Specific Plant and Apparatus to be worked upon.
(c) Any other information that may be reasonably specified by the DNO from time to time.

DOC2.6.3.3 At any time and from time to time during the current calendar year up to the Programming Phase (8 weeks ahead), Users may notify reasonable changes and additions to the outages previously notified during the Medium Term planning process. The DNO will consider whether the changes will adversely affect System security, stability or other parties, and will discuss with the party in question. Where the change is so discussed the DNO will inform the other affected Users.

DOC2.6.4 Programming Phase (24 hours to 8 weeks ahead inclusive)

DOC2.6.4.1 The Short Term Programme will form the basis of the Programming Phase and a rolling suggested programme for the following week and subsequent 7 week period respectively will be prepared weekly by the DNO.

DOC2.6.4.2 The DNO will update the programme each week and take account of any additional or varied outages.

DOC2.6.4.3 Any decision to depart from the outages and actions determined during this phase will immediately be notified to the DNO, who will inform other affected parties.
DISTRIBUTION OPERATING CODE (DOC)

DOC2.6.5 Generation Scheduling Information (Programming Phase) 24 hours to 8 weeks ahead inclusive.

DOC2.6.5.1 The DNO will obtain Scheduling information from Embedded Generators for Embedded Generating Plant and any Embedded Transmission System which do not constitute or contain BM Units which are active (ie submitting bid-offer data) where it considers it appropriate.

DOC2.6.5.2 The Scheduling information will specify the following on an individual Generation Set or Embedded Transmission System basis:

(a) The period the set or System is required.
(b) The planned half hourly output.
(c) Any other information the DNO reasonably considers necessary.

DOC2.6.6 Control Phase (0 to 24 hours ahead)

During the real time Operation any changes to the outage programme for the day shall be at the discretion of the DNO.

DOC2.7 Nuclear Generating Plant

DOC2.7.1 The DNO will endeavour to give as much notice as possible to a Generator with Nuclear Generating Plant which may be operationally affected by an outage which is to be included in a programme referred to in DOC2.6.4.1.

DOC2.7.2 Where a Generator with Nuclear Generating Plant which may be operationally affected by the DNO’s Distribution System outage programme referred to in DOC2.6.4.1 (acting as a reasonable operator) is concerned on grounds relating to safety about the effect which an outage within such outage programme might have on one or more of its Nuclear Generating Plant, it may contact the DNO to explain its concerns and discuss whether there is an alternative way of taking that outage (having regard to technical feasibility). If there is such an alternative way, but the DNO refuses to adopt that alternative way in taking that outage, the Generator may involve the Electricity Supply Industry (ESI) disputes resolution procedure to decide on the way the outage should be taken. If there is no such alternative way, then the DNO may take the outage despite that Generator’s concerns.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 2

DOC 2 - APPENDIX 1

OPERATIONAL PLANNING - LONG TERM PLANNING PHASE (YEAR 3 AHEAD)

The requirements of the Long Term Programme apply to Embedded Generating Plant and Embedded Transmission System connected to the DNO’s Distribution System specified in DOC2.3.

EACH CALENDAR YEAR BY:-

WEEK 2  Embedded Generators provide the DNO with a provisional Embedded Generating Plant or Embedded Transmission System outage programme for Year 3 ahead specifying the Generation Set and MW concerned, the preferred date for each proposed outage, and where there is a possibility of flexibility, the earliest start date and latest finishing date where applicable.

WEEK 12  The DNO will provide the Embedded Generators with details of constraints on the DNO’s Distribution System and potential DNO’s Distribution System requirements during each week of Years 3 ahead for an outage together with their perceived Output Usable requirements for Year 3 ahead.

WEEK 25  Embedded Generators will provide the DNO with updated provisional Embedded Generating Plant or Embedded Transmission System outage programmes together with the Registered Capacity and neutral weekly Output Usable forecasts in both cases for Year 3 ahead.

WEEK 28  The DNO after discussion with the Embedded Generator will notify each Embedded Generator with details of any suggested revisions the DNO proposes to the provisional Embedded Generating Plant or Embedded Transmission System outage programme previously supplied and the reasons for such proposed revisions including such information as provided in week 12.

Users will provide the DNO with details of proposed outages in Year 3 ahead which may affect the performance of the DNO’s Distribution System. This information need not be limited to Plant and Apparatus and System at the DNO interface. Details will comprise general outage requirements, start and end dates.

WEEK 42  The DNO after discussions with the Embedded Generator will notify each Embedded Generator with details of any suggested revisions necessary to maintain DNO System security to the updated provisional Embedded Generating Plant or Embedded Transmission System outage programme previously supplied.

WEEK 43  Following consultation with Users, the DNO will include these outage proposals in the Long Term Programme.

[date]December 2008
The requirements of the Medium Term Programme apply to Embedded Generating Plant and Embedded Transmission Systems connected to the DNO’s Distribution System as specified in DOC2.3.

EACH CALENDAR YEAR BY:-

WEEK 2  Embedded Generators not included in the Long Term Programme shall provide the DNO with a provisional Embedded Generating Plant or Embedded Transmission System outage programme for Years 1 and 2 specifying the Generation Set and MW concerned, the preferred date for each proposed outage, where applicable earliest start date and latest finishing date.

WEEK 10  Embedded Generators provide the DNO with estimates of Output Usable for each Embedded Generating Plant or Embedded Transmission System for Year 1 and 2 (weeks 1 to 52) and its proposed Generation Set and/or System outage programme for Years 1 and 2.

WEEK 12  The DNO will after discussion with the Embedded Generator provide the appropriate Embedded Generator with details of DNO’s Distribution System constraints and potential DNO’s Distribution System requirements during each week of Years 1 and 2 for an outage together with any suggested changes to its proposed Generation Set or System outage programme.

The DNO will notify each Embedded Generator of Output Usable requirements for Years 1 and 2 (weeks 1 to 52).

WEEK 28  Users within the DNO’s distribution services area will provide the DNO with details of outages due to take place during the Years 1 and 2 which may affect the performance of the DNO’s Distribution System. This will comprise updating the programme for Years 3 ahead where appropriate and including any subsequent requests.

In addition to outage proposals, the programme shall include Trip Testing, Risks of Trip, and other information where known which may affect the security and stability of the DNO’s Distribution System.

WEEK 41  Each Embedded Generator will provide the DNO with revised estimates of the Output Usable of each Embedded Generating Plant or Embedded Transmission System for Year 1 and 2 (weeks 1 to 52).

WEEK 48  Following consultation with Users, the DNO will include their proposals in the Medium Term Plan.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 2

DOC 2 - APPENDIX 3

OPERATIONAL PLANNING - SHORT TERM (CURRENT YEAR 52 WEEKS AHEAD DOWN TO 9 WEEKS AHEAD)

The Short Term Plan will be an update of the Medium Term Plan and comprise a receding period as the Programming Phase (24 hours to 8 weeks ahead inclusive) evolves through the current year.

EACH CALENDAR YEAR

WEEK 2  Embedded Generators not included in the Medium Term Plan will provide the DNO with a provisional Embedded Generating Plant or Embedded Transmission System outage programme for the current calendar year specifying the Embedded Generating Plant or Embedded Transmission System and MW concerned, duration of the outage, earliest start date and latest finishing date where applicable. Embedded Generators will also provide the DNO with revised estimates of Embedded Generating Plant or Embedded Transmission System Output Usable for weeks 9 - 52.

WEEK 4  DNO will inform Embedded Generators of Output Usable requirements for weeks 9 - 52.

WEEK 10  Embedded Generators will provide the DNO with estimates of each Embedded Generating Plant or Embedded Transmission System Output Usable for weeks 18 - 52.

WEEK 12  The DNO will inform Embedded Generators of their desired changes Embedded Generator to Output Usable requirements for weeks 18 - 52 and will provide details of DNO’s Distribution System constraints and DNO’s Distribution System requirements.

WEEK 25  Embedded Generators will provide the DNO with estimates of each Embedded Generating Plant or Embedded Transmission System Output Usable for weeks 28 - 52.

WEEK 27  The DNO will inform Embedded Generators of changes to Output Usable requirements for weeks 31 - 52.

WEEK 41  Embedded Generators will provide the DNO with estimates of each Embedded Generating Plant or Embedded Transmission System Output Usable for weeks 44 - 52.

WEEK 43  The DNO will inform Embedded Generators of changes to Output Usable requirements for weeks 44 - 52.

An update of Users proposals agreed in the Medium Term Plan will be included in the Short Term Programming Phase.

DISTRIBUTION OPERATING CODE 5

DOC5 TESTING AND MONITORING

DOC5.1 Introduction

DOC5.1.1 To ensure that the DNO’s Distribution System is operated efficiently and within its licence standards and to meet statutory actions the DNO will organise and carry out testing and/or monitoring of the effect of Users’ electrical apparatus on the DNO’s Distribution System.

DOC5.1.2 The testing and/or monitoring procedures will be specifically related to the technical criteria detailed in the Distribution Planning and Connection Code. They will also relate to the parameters submitted by Users in the Distribution Data Registration Code.

DOC5.1.3 This DOC5 also covers the testing requirements that might be imposed from time to time on Embedded Medium Power Stations owned by a Generator who is not party to the CUSC

DOC5.1.4 The testing carried out under this Distribution Operating Code (DOC5) should not be confused with the more extensive System Test outlined in DOC12.

DOC5.2 Objective

DOC5.2.1 The objective of this Distribution Operating Code is to specify the DNO’s requirement to test and/or monitor its DNO’s Distribution System to ensure that Users are not operating outside the technical parameters required by the Distribution Planning and Connection Code and/or the Distribution Operating Codes.

DOC5.3 Scope

DOC5.3.1 This Distribution Operating Code applies to the following Users of the DNO’s Distribution System:-

(a) Customers (it is not intended that the Distribution Code will necessarily apply to small Customers individually - their obligations will generally be dealt with on their behalf by their Supplier).

(b) Embedded Generators.

(c) Other Authorised Distributor connected to the DNO’s Distribution System.

(d) Suppliers.

(e) Meter Operators.

DOC5.4 Procedure Related to Quality of Supply

DOC5.4.1 The DNO will from time to time determine the need to test and/or monitor the quality of supply at various points on its DNO’s Distribution System.

DOC5.4.2 The requirement for specific testing and/or monitoring may be initiated by the receipt of complaints as to the quality of supply on the DNO’s Distribution System.
DISTRIBUTION OPERATING CODE (DOC)

DOC5.4.3 In certain situations the DNO may require the testing and/or monitoring to take place at the point of connection of a User with the DNO’s Distribution System.

DOC5.4.4 Where testing and/or monitoring is required at the Connection Point, the DNO will advise the User involved and will make available the results of such tests to the User.

DOC5.4.5 Where the results of such tests show that the User is operating outside the technical parameters specified in the Distribution Planning and Connection Code, the User will be informed accordingly.

DOC5.4.6 Where the User requests, a retest will be carried out and the test witnessed by a User representative.

DOC5.4.7 A User shown to be operating outside the limits specified in Distribution Planning and Connection Code will rectify the situation or disconnect the Apparatus causing the problem from its electrical System connected to the DNO’s Distribution System immediately or within such time as is agreed with the DNO.

DOC5.4.8 Continued failure to rectify the situation will result in the User being disconnected or de-energised in accordance with the Connection Agreement from the DNO’s Distribution System either as a breach of the Distribution Code or through the authority of the ESQCR, where appropriate.

DOC5.5 Procedure Related to Connection Point Parameters

DOC5.5.1 The DNO from time to time will monitor the effect of the User on the DNO’s Distribution System.

DOC5.5.2 The monitoring will normally be related to amount of Active Power and Reactive Power transferred across the Connection Point.

DOC5.5.3 Where the User is exporting to or importing from the DNO’s Distribution System Active Power and Reactive Power in excess of the parameters in the Connection Agreement the DNO will inform the User and where appropriate demonstrate the results of such monitoring.

DOC5.5.4 The User may request technical information on the method of monitoring and, if necessary, request another method reasonably acceptable to the DNO.

DOC5.5.5 Where the User is operating outside the specified parameters, the User will immediately restrict the Active Power and Reactive Power transfers to within the specified parameters.

DOC5.5.6 Where the User requires increased Active Power and Reactive Power in excess of the physical capacity of the Connection Point the User will restrict power transfers to those specified in the Connection Agreement until a modified Connection Agreement has been applied for from the DNO and physically established.
DISTRIBUTION OPERATING CODE (DOC)

DOC5.6 Grid Code Compliance for Medium Power Stations not subject to an embedded generation agreement

DOC5.6.1 Procedure For Compliance

DOC5.6.1.1 NGC may, from time to time, but generally not more than twice in any calendar year, request that the DNO procure from the Generator a statement confirming compliance with the relevant Grid Code Connection Conditions at the Embedded Medium Power Station not subject to an embedded generation agreement in question. Such requests will generally, but not necessarily, be contingent on the issues raised in DOC6.5.3.3 below.

DOC5.6.1.2 On request from the DNO, in furtherance of DOC5.6.1.1 above or at other times not generally more than twice per calendar year, the Generator will provide to the DNO a statement with appropriate supporting evidence of compliance with the relevant Grid Code requirements. The DNO will immediately submit this information to NGC. The Generator is at liberty to submit the data directly to NGC, but a copy must be submitted in parallel to the DNO.

DOC5.6.1.3 In the event that in NGC's view an Embedded Medium Power Station fails persistently to comply with the Grid Code Connection Conditions NGC shall notify the DNO giving details of the failure and of the monitoring that NGC has carried out.

DOC5.6.1.4 The DNO will notify the Generator responsible for the Embedded Medium Power Station in question as soon as possible, and in any case within 2 working days of all the facts contained in the NGC notice.

DOC5.6.1.5 The Generator responsible for the Embedded Medium Power Station in question will, as soon as possible, provide the DNO with an explanation of the reasons for the failure and details of the action that it proposes to take to comply with the Grid Code Connections Conditions within a reasonable period.

DOC 5.6.1.6 NGC, the DNO and the Generator will then discuss the action the Generator proposes to take and will endeavour to reach agreement as to:

(a) any short term operational measures necessary to protect other Users; and

(b) the parameters which are to be submitted for the Generation Set and the effective date(s) for the application of the agreed parameters.

DOC5.6.2 Procedure for Testing

DOC5.6.2.1 Subject to the provisions of DOC5.6.1 should the DNO fail to procure a notice of compliance to NGC’s reasonable satisfaction, NGC may at any time (although not normally more than twice in any calendar year in respect of any particular Embedded Medium Power Station not subject to an embedded generation agreement issue an instruction requiring the DNO to facilitate a test, provided NGC has reasonable grounds of justification based upon:

(a) a submission of data in respect of the relevant Embedded Medium Power Station indicating a change in performance; or

(b) a statement from the DNO or Generator indicating a change in performance; or
DISTRIBUTION OPERATING CODE (DOC)

(c) monitoring by NGC, whether or not carried out in accordance with DOC5.6.1.3 above; or
(d) notification from the DNO of completion of an agreed action from DOC5.6.1 above.

DOC5.6.2.2 The test referred to in DOC5.6.2.1 on any one or more of the Generation Sets comprising part of the relevant Embedded Medium Power Station should only be to demonstrate that:

(a) the relevant Generation Set meets the requirements of the paragraphs in the Grid Code Connection Conditions which are applicable to such Generation Sets or Power Station; or
(b) the relevant Generation Set meets the requirements for operation in Limited Frequency Sensitive Mode in accordance with CC.6.3.3, BC3.5.2 and BC3.7.2,

DOC5.6.2.3 The instruction referred to in DOC5.6.2.1 may only be issued where, following consultation and the preparation of a mutually agreed testing plan (to include prevailing economic conditions etc) and timetable between the DNO, Generator and NGC, NGC has:

(a) confirmed to the DNO and Generator the manner in which the test will be conducted, which shall be consistent with the principles established in DOC5.6.3; and
(b) received confirmation from the DNO that the relevant Generation Set would not then be unavailable by reason of forced outage or Planned Outage expected prior to the instruction.

DOC5.6.3 Conduct of Test

DOC5.6.3.1 The Generator is responsible for carrying out the test when requested by the DNO following a valid request from NGC in accordance with DOC5.6.2.1 and the Generator retains the responsibility for the safety of personnel and plant during the test.

DOC5.6.3.2 The performance of the Generation Set concerned will be recorded at NGC and/or DNO Control Centres with monitoring at site as and when necessary during the test.

DOC5.6.3.3 If monitoring at site is undertaken, the performance of the Generation Set will be recorded on a suitable recorder (with measurements taken as appropriate on the Generation Set Stator Terminals / on the LV side of the generator transformer) in the relevant User’s Control Centre, in the presence of a reasonable number of representatives appointed and authorised by NGC. If NGC or the DNO or the Generator requests, monitoring at site will include measurement of the following parameters during the test:

(a) for Steam Turbines: governor pilot oil pressure, valve position and steam pressure; or
(b) for Gas Turbines: Inlet Guide Vane position, Fuel Valve positions, Fuel Demand signal and Exhaust Gas temperature; or
(c) for Hydro Turbines: Governor Demand signal, Actuator Output signal, Guide Vane position; and/or
(d) for Excitation Systems: Generator Field Voltage and Power System Stabiliser signal where appropriate.

DOC5.6.3.4 The relevant test parameters and the pass/fail criteria shall be drawn from Section OC5.5.3 of the Grid Code.

DOC5.6.4 Test Failure/Re-test

DOC5.6.4.1 If the Generation Set concerned fails to pass the test the Generator must provide the DNO and NGC with a written report specifying in reasonable detail the reasons for any failure of the test so far as they are then known to the Generator after due and careful enquiry.

DOC5.6.4.2 The DNO has the responsibility under the Grid Code to forward the report of DOC5.6.4.1 above to NGC. This report must be provided within five Business Days of the test. If a dispute arises relating to the failure, NGC, the DNO and the Generator shall seek to resolve the dispute by discussion, and, if they fail to reach agreement, either of the DNO or Generator may by notice respectively:

(a) require NGC to initiate a re-test on 48 hours’ notice which shall be carried out following the procedure set out in OC5.5.2 and OC5.5.3 and subject as provided in OC5.5.1.3, as if NGC had issued an instruction at the time of notice from the relevant User; or

(b) confirm that it (or they) will exercise its right to carry out a re-test on 48 hours’ notice which shall be carried out following the procedure set out in Grid Code Sections OC5.5.2 and OC5.5.3 and subject as provided in Grid Code Sections OC5.5.1.6, as if NGC had issued an instruction at the time of notice from the DNO.

DOC5.6.5 Dispute following Re-test

DOC5.6.5.1 If the Generation Set in NGC’s view fails to pass the re-test and a dispute arises on that re-test, NGC, the DNO and the Generator may use the CUSC Disputes Resolution Procedure, (which embodies the ESI disputes resolution procedure) for a ruling in relation to the dispute, which ruling shall be binding.

DOC5.6.6 Dispute Resolution

DOC5.6.6.1 If following the procedure set out in DOC5.6.5 it is accepted that the Generation Set has failed the test or re-test (as applicable), the Generator shall within 14 days, or such longer period as NGC may reasonably agree, following such failure, submit in writing to the DNO for submission to NGC for approval the date and time by which the Generator shall have brought the Generation Set concerned to a condition where it complies with the relevant requirement.

DOC5.6.6.2 Should NGC not approve the Generator’s, proposed date or time (or any revised proposal), the Generator shall amend such proposal having regard to any comments NGC and/or the DNO may have made and re-submit it for approval.

DOC5.6.6.3 If the Generation Set fails the test the Generator shall resubmit to the DNO the relevant registered parameters of that Generation Set for the period of time until the Generation Set can achieve the parameters previously registered, as demonstrated (if required by NGC in accordance with DOC5.6.6.4) in a re-test. The DNO will submit these parameters to NGC as required by the Grid Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC5.6.6.4 Once the Generator, has indicated to NGC via the DNO the date and time that the Generation Set can achieve the parameters previously registered or submitted, NGC shall either accept this information or require the Generator to demonstrate the restoration of the capability by means of a repetition of the test referred to in DOC5.6.7 by an instruction requiring the DNO to ensure on 48 hours’ notice that such a test is carried out by the Generator.

DOC5.6.6.5 The provisions of this DOC5.6.6 will apply to such further test.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 6

DOC6  DEMAND CONTROL

DOC6.1  Introduction

DOC6.1.1 This Distribution Operating Code DOC6 is concerned with the provisions to be made by the DNO and Users with Systems connected to the DNO’s Distribution System in certain circumstances, to permit reductions in Demand in the event of insufficient Generating Plant, and transfers from External Interconnections being available to meet Demand or to avoid disconnection of Customers or in the event of breakdown and/or operating problems (such as in respect of System Frequency, System voltage levels or System thermal overloads) on any part of the National Electricity Transmission System GB Transmission System and/or the DNO’s Distribution System.

DOC6.1.2 This Distribution Operating Code deals with the following methods of Demand Control:-

(a) Customer Demand reduction, including Voltage Reduction, initiated by the DNO.

(b) Customer Demand reduction instructed by NGC.

(c) Automatic low frequency Demand disconnection.

(d) Emergency manual Demand disconnection.

The term “Demand Control” is used to describe any or all of these methods of achieving a Demand reduction.

Data relating to Demand Control should be expressed in MW.

DOC6.1.3 The situation where it is necessary to reduce Demand due to Civil Emergencies is dealt with in Distribution Operating Code, DOC9.

The Electricity Supply Emergency Code issued by the Department of Energy in November 1999 (as amended from time to time) provides that in certain circumstances consumers are given a certain degree of “protection” when rota disconnections are implemented pursuant to a direction under the Energy Act 1976. No such protection can be given under the Grid Code or this section of the Distribution Code.

DOC6.1.4 Connections between Power Stations comprising Generation Set(s) which comprise or contain BM Units which are active (ie. submitting bid-offer data) in the Balancing Mechanism and a DNO’s Distribution System will not, as far as is possible, be disconnected by a DNO pursuant to the provisions of DOC6 insofar as that would interrupt supplies.

(a) For the purpose of operation of the Power Station (including start-up and shutting down).

(b) For the purposes of keeping the Power Station in a state that it could be started-up when it is off–load for ordinary operational reasons.

(c) For the purpose of compliance with the requirements of a Nuclear Site Licence.

[date] December 2008
**Demand Control** pursuant to this DOC6 therefore applies subject to this exception.

**DOC6.1.5** The control of **Demand Control** between the DNO’s Distribution System and the National Electricity Transmission System GB Transmission System will be carried out in accordance with Operating Code of the Grid Code and is outwith the scope of this Distribution Operating Code.

**DOC6.2** **Objective**

To establish procedures to enable the **DNO**, following an instruction of NGC or otherwise, to achieve reduction in **Demand** that will either avoid or relieve operating problems on the National Electricity Transmission System GB Transmission System and/or the DNO’s Distribution System, in whole or in part in a manner that does not discriminate against or unduly prefer any one or any group of **Suppliers** or their **Customers** or **Other Authorised Distributors** in accordance with the **Distribution Licence**.

**DOC6.3** **Scope**

This Distribution Operating Code will apply to the **DNO** and to **Users** which in this Distribution Operating Code means:

(a) **Customers** (it is not intended that the Distribution Code shall apply to small Customers individually).

(b) **Embedded Generators**.

(c) **Other Authorised Distributor** connected to the DNO’s Distribution System.

**DOC6.3.2** Implementation of **Demand Control** by the **DNO** may affect all Suppliers’ Customers and where applicable, contractual arrangements between Suppliers and their Customers may need to reflect this.

**DOC6.4** **Operational System Load Reduction Arrangements**

**DOC6.4.1** The **DNO** will arrange within its DNO’s Distribution System a scheme to reduce load in a controlled manner by reducing voltage and/or by disconnecting Customers and/or Users.

**DOC6.4.2** A System of warnings will be contained within the load reduction arrangements to give notice, wherever practical, of impending implementation.

**DOC6.4.3** The **DNO** will arrange to have available within the DNO’s Distribution System, four stages of **Demand Control** in integral multiples of between four and six per cent. These stages may include the use of Voltage Reduction and/or other forms of Demand Control determined by the DNO.

**DOC6.4.4** The groups will be arranged so that disconnection can take place uniformly across the DNO’s Distribution System, and as far as practicable uniformly between Grid Supply Points.

**DOC6.4.5** The **DNO** will arrange to have available a scheme to implement a further four 5% stages of **Demand Control** upon receipt of a suitable warning from NGC which will be issued by 1600 hrs on the previous day.
The DNO will arrange to have available a scheme to implement further twelve 5\% stages of Demand Control.

**DOC6.4.6** Embedded Generators, Suppliers, Customers and Other Authorised Distributors connected to the DNO's Distribution System will need to be considered in the preparation of DNO’s Demand Control schemes.

**DOC6.4.7** The DNO shall issue instructions to such Users of the DNO’s Distribution System who are required to disconnect or reconnect and the User shall carry out the instructions without delay.

**DOC6.4.8** Once a disconnection has been applied at the instruction of the DNO, the User shall not reconnect until the DNO instructs the User to do so in accordance with this Distribution Operating Code.

**DOC6.4.9** The Users shall abide by the instructions of the DNO with regard to reconnection under this Distribution Operating Code without delay.

**DOC6.4.10** Where disconnection is envisaged by the DNO to be prolonged, the DNO may utilise disconnection rotas where 5 per cent groups are interchanged to ensure (so far as practicable) equitable treatment of Customers, provided that the proportion of total Demand disconnected at all times does not change.

**DOC6.5** Automatic Low Frequency Demand Disconnection

**DOC6.5.1** The DNO shall provide automatic low frequency disconnection in stages by tripping relays to disconnect at least 40\% of the DNO’s Distribution System Peak Demand in Scotland and 60\% of the DNO’s Distribution System Peak Demand in England and Wales (based on the winter peak value), in order to seek to limit the consequences of the loss of a major source of generation or an Event on the National Electricity Transmission System GB Transmission System which leaves part of the Total System with a generation deficit.

**DOC6.5.2** The Demand subject to automatic low frequency disconnection shall be split into discrete blocks. The number, location and size of the blocks and the associated low frequency settings will be as specified by the DNO. The intention is that the distribution of the blocks will be such as to give a reasonably uniform application throughout the DNO’s Distribution System, but may take into account any operational requirements and the essential nature of certain Demand.

**DOC6.5.3** Where conditions are such that, following automatic low frequency disconnection, it is not possible to restore all or a great proportion of those Customers so disconnected within a reasonable period of time, the DNO may instruct, at any time, further manual load disconnection and instruct a portion of the Customers which were disconnected by automatic low frequency disconnection to be restored in order that any further fall in Frequency will be contained by operation of automatic low frequency disconnection.

**DOC6.5.4** Once an automatic low frequency disconnection has taken place, it shall not be reconnected until the DNO instructs to do so in accordance with this Distribution Operating Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC6.5.5 Each Supplier and Other Authorised Distributor shall abide by the instructions of the DNO with regard to reconnection under this Distribution Operating Code without delay.

DOC6.5.6 In addition, Embedded Generators may wish to disconnect, automatically or manually, their plant from the System to which it is connected at certain frequency levels. Any such disconnection will be agreed with the DNO on connection to the DNO’s Distribution System in accordance with the Distribution Planning and Connection Code.

DOC6.6 Emergency Manual Disconnection of Demand

DOC6.6.1 The DNO shall make such arrangements as are necessary to enable it to disconnect Customers under emergency conditions irrespective of frequency.

DOC6.6.2 The DNO shall annually, by the end of September, prepare schedules with details, on a Grid Supply Point basis and including arrangements with Users, of the percentage block of Demand at that Grid Supply Point available for manual disconnection, the method of disconnection to be used and the timescale of the implementation of disconnection of each block.

DOC6.6.3 The scheme will be designed to be called into operation irrespective of System Frequency, and to be implemented in predetermined timescales to disconnect Demand progressively.

DOC6.6.4 Customers and Other Authorised Distributors may be required to provide manual disconnection facilities. Where required by the DNO to disconnect load, each Customer or Other Authorised Distributor shall abide by the instructions of the DNO with regard to disconnection under this Distribution Operating Code without delay and the instructed disconnection must be completed without undue delay.

DOC6.6.5 Once a disconnection has been applied at the instruction of the DNO reconnection shall not be applied until the DNO instructs it to be done in accordance with this Distribution Operating Code.

DOC6.6.6 Each Customer and Other Authorised Distributor shall abide by the instructions of the DNO with regard to reconnection under this Distribution Operating Code without delay.

DOC6.7 Co-ordination of Actions

DOC6.7.1 Where Demand Control is exercised by the DNO in order to safeguard the DNO’s Distribution System the DNO will liaise with and inform Users accordingly so far as is practical.

DOC6.7.2 Where Demand Control is exercised by the DNO on instruction or request from NGC in order to safeguard the Total System then the DNO is required to respond to these requests promptly but will liaise with and inform other Users so far as is practical.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 7

DOC7 OPERATIONAL LIAISON

DOC7.1 Introduction

DOC7.1.1 This Distribution Operating Code DOC7 sets out the requirements for the exchange of information in relation to Operations and/or Events on the DNO’s Distribution System and on the immediately adjacent parts of adjoining Systems which have had (or may have had), or will have (or may have) an Operational Effect.

(a) on the DNO’s Distribution System or on the System of any other User in the case of an Operation and/or Event occurring on the System of a User, and

(b) on the System of a User in the case of an Operation and/or Event occurring on the DNO’s Distribution System or the National Electricity Transmission System GB Transmission System, where no requirement for liaison is specified in any other section of the Distribution Code.

DOC7.1.2 The requirement to notify in DOC7 relates generally to communicating what has happened or what is to happen and not the reasons why. However, DOC7 provides, when an Event has occurred on the DNO’s Distribution System which itself has been caused by (or exacerbated by) an Operation or Event on a User’s System, the DNO in reporting the Event on the DNO’s Distribution System to a User can pass on what it has been told by the User in relation to the Operation on that User’s System.

DOC7.2 Objective

To provide for the exchange of information so that the implications of the Operation and/or Event can be considered and the possible risks arising from it can be assessed and appropriate action taken by the relevant party in order to maintain the integrity of the Total System and the User’s System. This Distribution Operating Code does not seek to deal with any actions arising from the exchange of information, but merely with that exchange.

DOC7.3 Scope

This Distribution Operating Code applies to the DNO and to Users, which in this Distribution Operating Code means:–

(a) High Voltage Customers.

(b) Embedded Generators connected to the DNO’s Distribution System at HV.

(c) Other Authorised Distributors connected to the DNO’s Distribution System at HV.

(d) Suppliers on behalf of their Customers where appropriate.
DISTRIBUTION OPERATING CODE (DOC)

DOC7.4 Communications

DOC7.4.1 The DNO and each User connected to the DNO’s Distribution System will establish communication channels to make effective the exchange of information required by DOC7.

DOC7.4.2 Communication should, as far as possible, be direct between the User and the operator of the network to which that User is connected.

DOC7.4.3 Information between a DNO and Users will be exchanged on the reasonable request of either party. The request may follow a specific Operation or Event, or be in accordance with a prior agreement to exchange information on particular types of Operation or Event.

This does not preclude the voluntary exchange of information which may be perceived as being relevant to the operation of the DNO or User System, in accordance with good operating practice.

DOC7.5 Requirement to notify Operations

DOC7.5.1 Notification Requirements

DOC7.5.1.1 In the case of an Operation on the DNO’s Distribution System or on receipt of notification of an Operation on the National Electricity Transmission System, which will have or may, in the opinion of the DNO, have an Operational Effect on the System of a User connected to the DNO’s Distribution System, the DNO will notify the User in accordance with DOC7.

DOC7.5.1.2 In the case of an Operation on the System of a User connected to the DNO’s Distribution System, which, in the opinion of the User, will have or may have an Operational Effect on the DNO’s Distribution System, the User will notify the DNO in accordance with DOC7.

DOC7.5.1.3 An Operation may be caused by another Operation or an Event on another’s System and in such situations the information to be notified is different from that where the Operation arose independently of any other Operation or Event.

DOC7.5.1.4 Whilst in no way limiting the general requirement to notify in advance as set out in this part of this Distribution Operating Code, DOC7.5, the following are examples of circumstances where notification may be required in accordance with this Distribution Operating Code:-

(a) The implementation of a scheduled outage of Plant and/or Apparatus which has been arranged pursuant to Distribution Operating Code DOC2.

(b) The Operation (other than, in the case of a User, at the instruction of the DNO) of a circuit breaker or isolator or any sequence or combination of the two, including any temporary over-stressing, System parallels, or Generation Set synchronising.

(c) Voltage control.
DISTRIBUTION OPERATING CODE (DOC)

DOC7.5.2  Form of Notification

DOC7.5.2.1 A notification under DOC7.5.1 will be of sufficient detail to describe the Operation, although it need not state the cause, and to enable the recipient of the notification reasonably to consider and assess the implications and risks arising and will include the name of the individual reporting the Operation on behalf of the DNO or the User, as the case may be. The recipient may seek clarification of the notification.

DOC7.5.2.2 The notification may be written or oral. Written notification must be of an immediate form such as electronic mail. Where the notification is oral, it shall be written down by the sender and be dictated to the recipient who shall write it down and repeat each phrase as received and on completion shall repeat the notification in full to the sender and check that it has been accurately recorded.

DOC7.5.3  Timing

A notification under DOC7.5.12 shall be given in sufficient time as will reasonably allow the recipient to consider and assess the implications and risks arising, and to undertake mitigating actions.

DOC7.6  Requirement to Notify Events

DOC7.6.1  Notification Requirements

DOC7.6.1.1 In the case of an Event on the DNO’s Distribution System or on receipt of notification of an Event on the National Electricity Transmission System GB Transmission System, which, in the opinion of the DNO, might have had or will have an Operational Effect on the System of a User connected to the DNO’s Distribution System, the DNO will notify the User in accordance with this DOC7. This does not preclude any User asking the DNO, to whose System he is connected, for information regarding the Event which has affected the User’s System.

DOC7.6.1.2 In the case of an Event on the System of a User connected to the DNO’s Distribution System, which has had or may have had an Operational Effect on the DNO’s Distribution System or on the National Electricity Transmission System GB Transmission System, the User will notify the DNO in accordance with this DOC7.

DOC7.6.1.3 An Event may be caused by (or exacerbated by) another Event or by an Operation on another’s System and in that situation the information to be notified is different from that where the Event arose independently or any other Event or Operation.

DOC7.6.1.4 Whilst in no way limiting the general requirement to notify set out in this part of this Distribution Operating Code, DOC7.6, the following are examples of circumstances where notification may be required in accordance with this Distribution Operating Code:-

(a) Where Plant and/or Apparatus is being operated in excess of its capability or may present a hazard to personnel.

(b) The actuation of an alarm or indication of an abnormal operating condition.
DISTRIBUTION OPERATING CODE (DOC)

(c) Adverse weather conditions being experienced or forecast.
(d) Breakdown of, or faults on, or temporary changes in the capabilities of, Plant and/or Apparatus including Protection control, communications and metering equipment.
(e) Increased risk of inadvertent Protection operation.

DOC7.6.2 Form of Notification

DOC7.6.2.1 A notification under DOC7.6.1 of an Event, although it need not state the cause, shall be of sufficient detail to enable the recipient of the notification to reasonably consider and assess the implications and risks arising. Details of the Event should include the timescale and the probability of repeat occurrences within a period. The recipient may seek clarification of the notification.

DOC7.6.2.2 The notification may be written or oral. Written notification must be of an immediate form such as electronic mail. Except in an emergency situation any oral notification shall, be written down by the sender and dictated to the recipient who shall write it down and repeat each phrase as received and on completion shall repeat the notification in full to the sender and check that it has been accurately recorded.

DOC7.6.3 Timing

A notification under DOC7.6.1 shall be given as soon as practicable after the occurrence of the Event, or time that the Event is known of or anticipated by the giver of the notification under this Distribution Operating Code DOC7.

DOC7.7 System Control

DOC7.7.1 Where a part of a DNO’s Distribution System is, by agreement, under the System Control of the National Electricity Transmission System GB Transmission System Control Centre then the requirements and provisions of the Grid Code shall apply to that situation as if that DNO’s Distribution System was the National Electricity Transmission System GB Transmission System.

DOC7.7.2 Where a part of a User’s System is, by agreement, under the System Control of a Distribution Control Centre the DNO, then the requirements and provisions of this Distribution Operating Code shall apply to that situation as if that System was part of the DNO’s Distribution System.

DOC7.8. Significant Incidents

DOC7.8.1 Where an Event on the DNO’s Distribution System or the National Electricity Transmission System GB Transmission System or the System of a User, in the opinion of the DNO, has had or may have had a significant effect on the System of any of the others, the Event shall be reported in writing to the owner of the System affected in accordance with the provisions of Distribution Operating Code DOC10. Such an Event will be termed a “Significant Incident”.

DOC7.8.2 Where the DNO notifies a User of an Event under DOC7, which the User considers has had or may have a significant effect on that User’s System, that User will require the DNO to report that Event in writing and will notify the DNO accordingly. Such an Event will also be termed a “Significant Incident”.

[Date] December 2008
Without limiting the general description set out in DOC7.8.1 or DOC7.4.10.2 a Significant Incident will include Events which result in, or may result in, the following:

(a) Voltage outside statutory limits.
(b) System Frequency outside statutory limits.
(c) System instability.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 8

DOC8 SAFETY CO-ORDINATION

DOC8.1 Introduction

DOC8.1.1 This Distribution Operating Code DOC8 specifies the Safety Management System criteria to be applied by the DNO and Users for the co-ordination, establishment and maintenance of necessary Safety Precautions when work or testing is to be carried out on Plant and/or Apparatus of the DNO or a User and where for this to be done safely, isolation on and/or earthing of the other’s System is needed. This Distribution Operating Code does not apply to the situation where Safety Precautions need to be agreed solely between Users.

DOC8.1.2 This Distribution Operating Code does not seek to impose a particular set of Safety Rules on the DNO and Users. The Safety Rules to be adopted and used by the DNO and each User shall be those chosen by each.

DOC8.2 Objectives

To lay down requirements with a view to ensuring safety of persons working at or across Operational and Ownership Boundaries between the DNO’s Distribution System and Users’ Systems.

DOC8.3 Scope

This Distribution Operating Code DOC8 specifies the Safety Management System criteria to be applied by the DNO and all Users of the DNO’s Distribution System at or across an Operational Boundary, Users for the purposes of this Distribution Operating Code being:-

(a) High Voltage Customers.

(b) Embedded Generators, but excluding the OTSO.

(c) Other Authorised Distributors connected to the DNO’s Distribution System.

(d) Meter Operators.

(e) Any other party reasonably specified by the DNO including Users with Unmetered Supply and those connected at Low Voltage for appropriate sections of DOC8 where necessary.

DOC8.4 Operational Safety

DOC8.4.1 Approved Safety Management Systems

DOC8.4.1.1 At each site or location where an Operational Boundary exists, a Safety Management System specifying the principles and procedures to be applied so as to ensure the health and safety of all who are liable to be working or testing on the DNO’s Distribution System, or on Plant and Apparatus connected to it, will be established by the DNO and Users. For interfaces involving HV Systems this shall include the provision for Control Person(s), a system of documentation and the establishment of Safety Precautions.
DISTRIBUTION OPERATING CODE (DOC)

DOC8.4.2 Authorised Persons

DOC8.4.2.1 The DNO and every User shall at all times have nominated a person or persons to be responsible for the co-ordination of safety pursuant to this Distribution Operating Code, those persons being referred to in this Distribution Operating Code as Control Persons. (Under the conditions of the DNO’s Safety Rules a Control Person may either be at the DNO’s Distribution Control Centre or be a person authorised in accordance with DOC8.4.2.2, who is at the site or location of the Operational Boundary).

DOC8.4.2.2 Control Persons and persons concerned with the carrying out of Safety Precautions and work on or testing of Plant and Apparatus forming part of, or connected to, the DNO’s Distribution System shall have a written authorisation designating their role in implementing the Safety Management System.

DOC8.4.2.3 The written authorisation shall indicate the class of Operation and/or the class of work permitted and the parts of the System, the DNO and/or Users, to which the written authorisation shall apply.

DOC8.4.3 System of Documentation

DOC8.4.3.1 A system of documentation shall be maintained by the DNO and the appropriate Users which will record the inter-system Safety Precautions taken when:-

(a) Work and/or testing is to be carried out on HV Plant and/or Apparatus across the Operational Boundary.

(b) Isolation and/or earthing of the other’s System is required.

DOC8.4.3.2 Where relevant, copies of the Safety Management Systems and related documentation shall be exchanged between the DNO and Users for each Operational Boundary.

DOC8.4.3.3 The DNO and Users shall maintain a suitable system of documentation which records all relevant operational events that have taken place on the DNO’s Distribution System or any other System connected to it and the co-ordination of relevant Safety Precautions for work.

DOC8.4.3.4 All documentation relevant to the Operation of the Distribution System, and Safety Precautions taken for work or tests, shall be held by the DNO and the appropriate User for a period of not less than six months.

DOC8.4.4 Safety Precautions

The establishment of Safety Precautions involves:-

(a) the isolation from the remainder of the System of Plant and/or Apparatus, including from Low Voltage infeeds, either by an Isolating Device in the isolating position and immobilised and locked or by other means of rendering the Plant or Apparatus Isolated, and/or

(b) the earthing by way of providing a connection between a conductor and earth by using an Earthing Device which is applied and where reasonably practicable, immobilised and locked, the extent of the Safety Precautions required being determined pursuant to this Distribution Operating Code.
DISTRIBUTION OPERATING CODE (DOC)

DOC8.5 Environmental Safety

DOC8.5.1 Site Safety and Security

DOC8.5.1.1 Arrangements shall be made by the DNO and Users to ensure site safety and security as required by statutory requirements.

DOC8.5.1.2 Suitable arrangements shall be agreed between the DNO and the relevant Users to provide free and unrestricted access to the DNO’s Plant and Apparatus at substations or similar by the DNO’s personnel or their designated representatives at all times.

DOC8.5.2 Site Specific Hazards

Suitable arrangements shall be made by the DNO and/or the relevant Users to ensure that personnel are warned by an appropriate means of hazards specific to any site, before entering any area of the site. This shall include hazards that may be temporary or permanent. Where these risks include contamination or similar, suitable decontamination facilities and procedures shall be provided.

DOC8.6 Information Flow and Co-ordination

DOC8.6.1 Schedules of Responsibility

DOC8.6.1.1 The DNO and Users shall jointly agree and set down in writing schedules specifying the responsibilities for System Control of Equipment. These shall ensure that only one party is responsible for any item of Plant or Apparatus at any one time.

DOC8.6.1.2 Pursuant to the Distribution Planning and Connection Code, Site Responsibility Schedules specifying the responsibilities for ownership, operation and maintenance shall be jointly agreed by the DNO and the appropriate User(s) for each site or location where an Operational Boundary or joint responsibility exists. This will include Operation Diagrams illustrating sufficient information for Control Persons to carry out their duties which shall be exchanged by the DNO and the appropriate User.

DOC8.6.1.3 A copy of the Site Responsibility Schedules and Operation Diagrams shall be retained by the DNO and the appropriate User(s). Site Responsibility Schedules and Operation Diagrams shall be maintained by the DNO and the appropriate User(s) and exchanged as necessary to ensure that they reflect the current agreements.

DOC8.6.2 Outage Co-ordination

DOC8.6.2.1 For those Users connected at HV and having firm supply connections (provided by more than one circuit) and where the User so requests the DNO, these schedules shall identify those specified DNO circuits on which Planned Outages by the DNO shall be notified to the User. These specified circuits will be those where the DNO and the User have agreed that during outages of the specified circuits the User can introduce measures to manage critical processes or safety aspects. These specified circuits will usually operate at the voltage level at which the supply is provided and will have a significant effect on the security level of the User’s supply.

[Date] December 2008
DISTRIBUTION OPERATING CODE (DOC)

DOC8.6.2.2 Those Users connected at HV and not having firm supply connections (provided by more than one circuit) may seek to obtain outage planning information through arrangements with the DNO.

DOC8.6.3 Nomination of Control Persons

The DNO and each User shall at all times have nominated a Control Person or Control Persons responsible for co-ordination of Safety From The System pursuant to this Distribution Operating Code.

DOC8.6.4 Communications

DOC8.6.4.1 Where the DNO reasonably specifies the need, suitable communication systems shall be established between the DNO and other Users to ensure the control function is carried out in a safe and secure manner.

DOC8.6.4.2 Where the DNO reasonably decides a back up or alternative routing of communication is necessary to provide for the safe and secure Operation of the DNO’s Distribution System the means shall be agreed with the appropriate Users.

DOC8.6.4.3 Schedules of telephone numbers/call signs shall be exchanged by the DNO and appropriate User to enable control activities to be efficiently co-ordinated.

DOC8.6.4.4 The DNO and appropriate Users will establish 24-hour availability of personnel with suitable authorisation where the joint operational requirements demand it.

DOC8.7 Procedures

DOC8.7.1 Pursuant to this Distribution Operating Code the Control Person and/or Authorised Persons for each of the DNO and a User relating to the place where Safety Precautions are required will contact each other to coordinate the Safety Precautions, and the Control Person requesting Safety Precautions shall be referred to as the “Requesting Control Person” and the Control Person being requested and implementing the Safety Precautions shall be referred to as the “Implementing Control Person”.

DOC8.7.2 Procedures shall be maintained by the DNO and the appropriate Users which clearly specify the responsibility for System Control of Plant and Apparatus and these shall ensure that only one Control Person is responsible for any item of Plant and Apparatus at any one time.

DOC8.7.3 The operational procedures shall be in accordance with the Safety Management System agreed between the DNO and the User(s).
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 9

DOC9 CONTINGENCY PLANNING

DOC9.1 Introduction

This Distribution Operating Code DOC9 sets out requirements and procedures relating to the following planning procedures for abnormal situations:

DOC9.1.1 Black Start

This Distribution Operating Code DOC9 covers the requirements for the implementation of Black Start recovery procedures following a Total Shutdown or Partial Shutdown of the Total System as recognised by NGC. The Black Start procedure provides for the recovery of the Total System in the shortest possible time taking into account Power Station capabilities and the operational constraints of the Total System, in accordance with the Grid Code and the requirements of NGC.

DOC9.1.2 Re-synchronising Islands

The requirements for re-synchronising parts of the Total System where there is no Total Shutdown or Partial Shutdown but parts of the Total System are out of synchronism with each other.

DOC9.1.3 Joint System Incident Procedure

The requirements for the establishment of a communication route and arrangements between responsible representatives of the DNO and Users involved in, or who may be involved in, an actual or potential serious or widespread Total System disruption which requires or may require urgent managerial response, day or night.

DOC9.1.4 Civil Emergencies

The requirements for dealing with a Civil Emergency which under the Act is any natural disaster or other emergency which, in the opinion of the Secretary of State, is or may be likely to disrupt electricity supplies. The procedures may be similar to, or separate from, the Demand reduction schemes in Distribution Operating Code DOC6.

DOC9.2 Objectives

This Distribution Operating Code sets out Contingency Planning procedures to enable co-ordination between all Users with a common approach to give uniformity of priorities to restart or to operate the Total System in abnormal situations. It also specifies requirements to be met during periods of declared civil emergencies.

DOC9.3 Scope

This Distribution Operating Code applies to the DNO and to Users which in this Distribution Operating Code means, the Users specified below with a High Voltage connection to the DNO's Distribution System:
(a) **Customers** (it is not intended that the **Distribution Code** shall apply to small **Customers** individually).

(b) **Embedded Generators**, but excluding the **OTSO**.

(c) **Other Authorised Distributors** connected to the DNO’s **Distribution System**.

Any actions required of **Users** connected at **HV** will be identified by the **DNO** and discussed with **Users**.

**DOC9.4 Black Start**

**DOC9.4.1 Shutdown**

**DOC9.4.1.1** During a **Total Shutdown** or **Partial Shutdown** and during the subsequent recovery the Security Standards set out in, or deriving authority pursuant to, the **Transmission Licence** and the **Distribution Licence** may not apply and the **Total System** may be operated outside normal voltage and **Frequency** standards.

**DOC9.4.1.2** In a **Total Shutdown** or **Partial Shutdown**, it may be necessary for **NGC** to issue **Emergency Instructions** and it may be necessary to depart from the normal **Balancing Mechanism** operation in issuing Bid-Offer Acceptances.

**DOC9.4.1.3** Certain **Embedded Power Stations** are registered by **NGC**, as having the ability of at least one of its **Generation Sets** to start up from shutdown without connections to external power supplies. Such **Power Stations** are to be referred to as **Black Start Stations**.

**DOC9.4.1.4** For each **Black Start Station** plans will be put in place, in accordance with the **Grid Code**, which in the event of a **Partial Shutdown** or **Total Shutdown**, will provide for the establishment of a **Power Island**. These plans are known as Local Joint Restoration Plans produced jointly by **NGC** the **DNO** and **Generators** and may include **Embedded Generators**. **DNOs** will be party to these Plans irrespective of whether the **Black Start Station** is **Embedded**.

**DOC9.4.1.5** In Scotland a Local Joint Restoration Plan may include more than one **Black Start Station** and may be produced with and include obligations on the relevant **Transmission Licensee**, **Generators** responsible for **Generation Sets** not at a **Black Start Station** and other **Users**.

**DOC9.4.2 Black Start Situation**

In the event of a **Total Shutdown** or **Partial Shutdown**, the **DNO** will, as soon as reasonably practicable, inform **Users** which, in the **DNO’s** opinion, need to be informed that a **Total Shutdown** or, as the case may be, a **Partial Shutdown**, exists and that **NGC** intends to implement the **Black Start** procedure.

In Scotland, in exceptional circumstances, as specified in the Local Joint Restoration Plan, the relevant **Transmission Licensee** may invoke such Local Joint Restoration Plan for its own **Transmission System** and operate within its provisions.**DOC9.4.3 Black Start Recovery Procedure**
DOC9.4.3.1 The procedure necessary for a recovery from a Total Shutdown or Partial Shutdown is known as Black Start, the main objective of which is the restoration of the Total System as an integrated whole as soon as possible bearing in mind the restoration of Customers. The procedure for a Partial Shutdown is the same as that for a Total Shutdown except that it applies only to a part of the Total System. It should be remembered that a Partial Shutdown may affect parts of the Total System which are not themselves shut down.

DOC9.4.3.2 The complexities and uncertainties of recovery from a Total Shutdown or Partial Shutdown require that Black Start is sufficiently flexible in order to accommodate the full range of Generation Set and Total System characteristics and operational possibilities and this precludes the setting out of concise chronological sequences. The overall strategy will in general include the overlapping phases of establishment of isolated groups of Power Stations together with complementary local Demand termed “Power Islands”, step by step integration of these groups into larger sub-systems and eventually re-establishment of a complete Total System.

DOC9.4.3.3 Where there are no Power Stations with a contracted Black Start capability within the DNO's Distribution System, then restoration of supply may be substantially delayed while the relevant Transmission Licensee re-establishes the National Electricity Transmission System GB Transmission System or part of the National Electricity Transmission System GB Transmission System from a restored Power Island. The DNO shall re-appraise the priorities in these situations and restore supplies in accordance with such priorities.

DOC9.4.3.4 The procedure for a Black Start shall, therefore, be that specified by the relevant Transmission Licensee at the time. Users shall abide by the DNO’s instructions during a Black Start situation, even if they conflict with the general overall strategy outlined in DOC9.4.3.2.

DOC9.4.3.5 The DNO may, in accordance with the relevant Transmission Licensee’s requirements, be required to issue instructions (although this list should not be regarded as exhaustive) to a Black Start Station relating to the commencement of generation, to a User connected to the DNO’s Distribution System or Customers in the DNO's authorised operating area, as appropriate, relating to the restoration of Demand and to an Embedded Power Station relating to their preparation for commencement of generation when an external power supply is made available to them, and in each case may include switching instructions.

DOC9.4.3.6 Where the DNO, as part of the Black Start procedure, has given an instruction to a Black Start Station to initiate startup the Black Start Station shall confirm to the DNO when the startup of a Generation Set has been completed. Following confirmation of startup, the DNO will endeavour to stabilise that Generation Set by the establishment of appropriate Demand following which the DNO may instruct the Black Start Station to start up the remaining available Generation Sets and auxiliary gas turbines if any at that Black Start Station and synchronise them to create a Power Island.
DOC9.4.3.7  Interconnection of Power Islands

In accordance with the requirements of the relevant Transmission Licensee, the DNO may be required to issue instructions to Users so as to establish, maintain and expand Power Islands and to interconnect Power Islands to achieve larger sub-systems and subsequently to form an integrated System and re-establishment of the Total System. Users shall at all times abide by the DNO's instructions in relation to interconnection of Power Islands.

DOC9.4.3.8  The conclusion of the Black Start situation and the time of the normal operation of the Total System will be determined by the relevant Transmission Licensee who shall inform the DNO. The DNO will inform Users of the DNO’s Distribution System which in the DNO’s opinion need to be informed that the Black Start situation no longer exists and that normal operation of the Total System has begun.

DOC9.5  Re-synchronisation of De-synchronised Islands

DOC9.5.1  Where parts of the Total System are out of synchronism with each other but there is no Total Shutdown or Partial Shutdown NGC will instruct Users to regulate generation or Demand, as the case may be, to enable the de-synchronised islands to be re-synchronised.

DOC9.5.2  DNOs may be involved in re-synchronising by issuing instructions to Users in accordance with the requirements of NGC. Users shall at all times abide by the DNO’s instructions in relation to re-synchronising de-synchronised islands.

DOC9.5.3  The re-synchronising of de-synchronised islands are covered by De-synchronised Island Procedures agreed between NGC and the relevant Transmission Licensee, DNO and Generators.

DOC9.6  Joint System Incident Procedure

DOC9.6.1  A Joint System Incident is an Event (as referred to in Distribution Operating Code DOC7) wherever occurring which in the opinion of the DNO has or may have a serious and/or widespread effect on, in the case of an incident on a User’s System, the DNO’s Distribution System or the National Electricity Transmission System or, in the case of an incident on the DNO’s Distribution System or the National Electricity Transmission System, on a User’s, or Users’, System(s). Where an incident on a User’s System has or may have no effect on the DNO’s Distribution System or the National Electricity Transmission System, then such an incident does not fall within this Distribution Operating Code and accordingly DOC9 shall not apply to it.

DOC9.6.2  Each User requested by the DNO in accordance with the Distribution Planning and Connection Code, shall provide in writing to the DNO and the DNO shall provide in writing to each such User a telephone number or numbers at which or through which responsible management representatives, who are fully authorised to take binding decisions on behalf of their appointers, can be contacted day or night when there is a Joint System Incident. The lists of telephone numbers shall be provided at the time that a User connects to the DNO’s Distribution System and must be updated (in writing) as often as the information contained in them changes.
DISTRIBUTION OPERATING CODE (DOC)

DOC9.6.3 On the occurrence of an **Event**, then pursuant to Distribution Operating Code DOC7:

(a) If it is on the **System** of a **User**, the **User** shall notify the **DNO** accordingly together with any other **User** who is or may be affected and will inform the **DNO** of which **Users** it has informed.

(b) If it is on the **DNO's Distribution System**, the **DNO** shall notify all **Users** who are or may be affected.

DOC9.6.4 Following notification by a **User** of an **Event**, the **DNO** will if it considers necessary, telephone the **User** on the telephone number referred to in DOC9.6.2 to obtain such additional information as it requires.

DOC9.6.5 Following notification of an **Event** in accordance with DOC9.6.3(a) or (b), and/or the receipt of any additional information requested pursuant to DOC9.6.4, the **DNO** will determine whether or not the **Event** is a **Joint System Incident**, and, if so, the **DNO** may set up a **System Incident Centre** in order to avoid overloading existing operational arrangements of the **DNO**.

DOC9.6.6 The **DNO** shall as soon as possible notify all relevant **Users** that a **System Incident Centre** has been established and the telephone number(s) of the **DNO’s System Incident Centre** if different from those already supplied pursuant to DOC9.6.2.

DOC9.6.7 All communications between the responsible management representatives of the relevant parties with regard to the **DNO’s role in the Joint System Incident** shall be made via the **System Incident Centre**, if it has been established.

DOC9.7 Civil Emergencies

DOC9.7.1 Directions under Section 96 of the **Act** place an obligation on the **DNO** to prepare and maintain plans for mitigating the effects of any civil emergency which may occur in accordance with the Electricity Supply Emergency Code. That Code describes the steps which Government might take to deal with an electricity supply emergency envisaged under Section 96(7) of the **Act**, or Section 3(i)(b) of the Energy Act 1976 and sets down the actions which Companies in the Electricity Supply Industry should plan to take and which may be needed or required in order to deal with such an emergency.

DOC9.7.2 In an electricity emergency it may become necessary to restrict **Users’ Demand** for and consumption of electricity and may be achieved by one or more of the following methods:

(a) Appeals by the Government to the public for voluntary restraint.

(b) The issue of Orders under the Energy Act 1976 requiring restrictions on consumption by industry and commerce.

(c) The issue of directions under the Energy Act 1976 requiring rota disconnections and associated restrictions.
DISTRIBUTION OPERATING CODE (DOC)

DOC9.7.3 In the event that the Secretary of State issues directions to the DNO to implement rota disconnections, the DNO will establish an Emergency Co-ordinating Centre and as soon as possible establish communications with such relevant Users as is necessary to ensure operational liaison. The plans to be implemented will be similar or separate from the schemes outlined in Distribution Operating Code, DOC6.

DOC9.7.4 The plans make provision for the need to maintain supply, so far as practicable, to consumers in protected categories. For the purpose of the Distribution Code Nuclear Generating Plant shall be deemed to be a protected category in accordance with the provisions of DOC6.1.4.
DISTRIBUTION OPERATING CODE 10

DOC10 OPERATIONAL EVENT REPORTING AND INFORMATION SUPPLY

DOC10.1 Introduction

DOC10.1.1 This Distribution Operating Code DOC10 sets out the requirements for reporting in writing and, where appropriate, more fully those Events termed Significant Incidents which were initially reported under Distribution Operating Code DOC7 and those statutory specified events to be reported under the ESQCR.

Information between a DNO and Users will be exchanged on the reasonable request of either party.

DOC10.1.2 DOC10 also provides for the joint investigation of Significant Incidents by the Users involved.

DOC10.2 Objectives

The objective of this Distribution Operating Code is to facilitate the provision of more detailed information in writing and, where agreed between the DNO and the Users involved, joint investigation of those Significant Incidents initially reported under DOC7.

DOC10.3 Scope

This Distribution Operating Code DOC10 applies to the DNO and to Users, which in this Distribution Operating Code means:-

(a) High Voltage Customers.
(b) Embedded Generators connected to the DNO’s Distribution System at HV.
(c) Other Authorised Distributors connected to the DNO’s Distribution System at HV.
(d) Suppliers on behalf of their Customers where appropriate.

DOC10.4 Communications

DOC10.4.1. The DNO and Users connected to the DNO’s Distribution System shall establish communication channels to ensure the effectiveness of this Distribution Operating Code. Communication should, as far as possible, be direct between the User and the operator of the network to which that User is connected. However, this does not preclude communication with the User’s nominated representative.
DISTRIBUTION OPERATING CODE (DOC)

DOC10.4.2 Operational Event Reporting

DOC10.4.2.1 Written Reports of Events by Users to the DNO

In the case of an Event which has been reported initially to the DNO under DOC7.6 and subsequently has been determined by the DNO to be a Significant Incident, a written report will be given to the DNO by the User in accordance with DOC10. The DNO will not pass this report on to other affected Users but may use the information contained therein in preparing a report under DOC10 to a User in relation to a Significant Incident on the DNO’s Distribution System which has been caused by (or exacerbated by) the Significant Incident on the User’s System.

DOC10.4.2.2 Written Reports of Events by the DNO to Users

In the case of an Event which has been reported initially to the User under DOC7.6 and subsequently has been determined by the User to be a Significant Incident, a written report will be given to the User by the DNO in accordance with DOC10. The User will not pass this report on to other affected Users but may use the information contained therein in preparing a report for another Authorised Electricity Operator connected to its System in relation to a Significant Incident which has been caused by (or exacerbated) the Significant Incident on the DNO’s Distribution System.

DOC10.4.3 Form of Report in Writing

DOC10.4.3.1 A report under DOC10.4.2 will be in writing and shall be sent to the DNO or User, as the case may be, containing written confirmation of the initial notification given under DOC7 together with more details relating to the Significant Incident, although it need not state the cause of the Event save to the extent required under DOC7.6.2 and such further information which has become known relating to the Significant Incident since the initial notification under DOC7. The report should, as a minimum, contain those matters specified in the Appendix 1 of this DOC10 which is not intended to be exhaustive to this DOC10. The recipient may raise questions to clarify the notification, and the giver of the notification will, in so far as it is able, answer any questions raised.

DOC10.4.4 Timing of the Report in Writing

DOC10.4.4.1 A written report under DOC10.4.2 shall be given as soon as reasonably practicable after the initial notification under DOC7 and in any event a preliminary report shall normally be given within 24 hours of such time.

DOC10.4.5 Statutory Reports of Specified Events

DOC10.4.5.1 Nothing in this Distribution Operating Code shall be construed as relieving DNOs or Users from their duty to report events specified in the ESQCR in accordance with those Regulations in so far as they apply to Users.

DOC10.4.6 Joint Investigation into Significant Incidents

DOC10.4.6.1 Where a Significant Incident has been declared and a report submitted under DOC10 either party or parties may request in writing that a joint investigation be carried out.
DOC10.4.6.2 The composition of such an investigation panel will be appropriate to the incident to be investigated, and agreed by all parties involved.

DOC10.4.6.3 Where there has been a series of **Significant Incidents** (that is to say, where a **Significant Incident** has caused or exacerbated another **Significant Incident**) the parties involved may agree that the joint investigation should include some or all of those **Significant Incidents**.

DOC10.4.6.4 A joint investigation will only take place where all affected parties agree to it. The form and rules of, the procedure for, and all matters (including, if thought appropriate, provisions for costs and for a party to withdraw from the joint investigations once it has begun) relating to the joint investigation will be agreed at the time of a joint investigation and in the absence of agreement the joint investigation will not take place.

DOC10.4.6.5 Any joint investigation under **DOC10** is separate from any inquiry which may be carried out under the **Electricity Supply Industry (ESI) disputes resolution procedure**.
MATTERS, IF APPLICABLE TO THE SIGNIFICANT INCIDENT, TO BE INCLUDED IN A WRITTEN REPORT GIVEN IN ACCORDANCE WITH DOC10.4.2.

1. Time and date of Significant Incident.
2. Location.
3. Plant and/or Apparatus involved.
4. Brief description of Significant Incident.
5. Estimated time and date of return to service.
7. Set/Station frequency response achieved
8. Set/Station MVAr performance achieved
9. Ownership of the faulted Plant and/or Apparatus
10. Estimated Demand Control relief undertaken
11. Estimated Demand shed Automatic/Manual
12. Time and date of Demand restoration
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 11

DOC11 NUMBERING AND NOMENCLATURE OF ELECTRICAL APPARATUS AT OWNERSHIP BOUNDARIES

DOC11.1 Introduction

DOC11.1.1 This Distribution Operating Code DOC11 sets out the responsibilities and procedures for notifying the relevant owners of the numbering and nomenclature of Apparatus at Ownership Boundaries.

DOC11.1.2 The numbering and nomenclature of Apparatus shall be included in the Operation Diagram prepared for each site having an Ownership Boundary.

DOC11.2 Objectives

The prime objective embodied in this Distribution Operating Code is to ensure that at any site where there is an Ownership Boundary every item of Apparatus has numbering and/or nomenclature that has been mutually agreed and notified between the owners concerned to ensure, so far as is reasonably practicable the safe and effective Operation of the Systems involved and to reduce the risk of error.

DOC11.3 Scope

This Distribution Operating Code DOC11 applies to the DNO and to Users, which in this Distribution Operating Code excludes Users connected at Low Voltage without Generation and protected by a fuse(s) or other device(s) rated at 100 amps or less, (except it may apply to such Users who are the sole User connected to an HV/LV transformer.), and otherwise includes:

(a) Customers.

(b) Embedded Generators, but excluding the OTSO.

(c) Other Authorised Distributors connected to the DNO’s Distribution System.

(d) Meter Operators.

DOC11.4 Procedure

DOC11.4.1 New Apparatus

DOC11.4.1.1 When the DNO or a User intends to install Apparatus having an interface at an Ownership Boundary the proposed numbering and/or nomenclature to be adopted for the Apparatus must be notified to the other owner(s).

DOC11.4.1.2 The notification shall be made in writing to the relevant owner(s) and will consist of Operation Diagrams incorporating the proposed new Apparatus to be installed and its proposed numbering and/or nomenclature.

DOC11.4.1.3 The notification shall be made to the relevant owner(s) at least eight months prior to the proposed installation of the Apparatus.
DISTRIBUTION OPERATING CODE (DOC)

DOC11.4.1.4 The relevant owners shall respond in writing within one month of the receipt of the notification confirming both receipt and whether the proposed numbering and/or nomenclature is acceptable or, if not, what would be acceptable.

DOC11.4.1.5 In the event that agreement cannot be reached between the DNO, and the other owner(s), the DNO, acting reasonably, shall have the right to determine the numbering and nomenclature to be applied at that site.

DOC11.4.2 Existing Apparatus

DOC11.4.2.1 The DNO and/or every User shall supply the DNO and/or every other User on request with details of the numbering and nomenclature of Apparatus on sites having an Ownership Boundary.

DOC11.4.2.2 The DNO and every User shall be responsible for the provision and erection of clear and unambiguous labelling showing the numbering and nomenclature of its Apparatus on sites having an Ownership Boundary.

DOC11.4.3 Changes to Existing Apparatus

DOC11.4.3.1 Where the DNO or a User needs or wishes to change the existing numbering and/or nomenclature of any of its Apparatus on any site having Ownership Boundary, the provisions of DOC11.4.1 shall apply with any amendments necessary to reflect that only a change is being made.

DOC11.4.3.2 Where a User changes the numbering and/or nomenclature of its Apparatus, which is the subject of DOC11, the User will be responsible for the provision and erection of clear and unambiguous labelling.

DOC11.4.3.3 Where a DNO changes the numbering and/or nomenclature of its Apparatus, which is the subject of DOC11, the DNO will be responsible for the provision and erection of clear and unambiguous labelling.
DISTRIBUTION OPERATING CODE (DOC)

DISTRIBUTION OPERATING CODE 12

DOC12 SYSTEM TEST

DOC12.1 Introduction

DOC12.1.1 This **Distribution Operating Code** DOC12 sets out the responsibilities and procedures for arranging and carrying out **System Test** which have or may have an effect on the **Systems** of the **DNO** or **Users**. **System Test** are those tests which involve either simulating conditions or the controlled application of irregular, unusual or extreme conditions on the **Total System** or any part of the **Total System**, but do not include commissioning or recommissioning tests or any other tests of a minor nature.

DOC12.1.2 **System Test** which have a minimal effect on the **Distribution System** of the **DNO** or the **Systems** of others will not be subject to this procedure; minimal effect will be taken to mean variations in voltage, **Frequency** and waveform distortion of a value not greater than those figures which are defined in the **Distribution Planning and Connection Code**.

DOC12.1.3 If the **System Test** proposed by the **DNO** or **User** connected to the **DNO’s Distribution System** will or may have an effect on the **National Electricity Transmission System GB Transmission System**, then the provisions of the **Grid Code** shall apply.

DOC12.1.4 A **System Test** proposed by **NGC** under the **Grid Code** will be treated by the **DNO** as a **System Test** under this DOC 12 if it is considered by the **DNO** to have any effect on **Users** as defined in DOC 12.3.1.

DOC12.2 Objectives

DOC12.2.1 The objectives of this **Distribution Operating Code** are to:-

(a) Ensure that the procedures for arranging and carrying out of **System Test** do not so far as practicable, threaten the safety of either personnel or the general public and cause minimum threat to the security of supplies, the integrity of **Plant** and/or **Apparatus** and cause minimum detriment to the **DNO** and **Users**.

(b) Set out procedures to be followed for establishing and reporting **System Test**.

DOC12.3 Scope

DOC12.3.1 This **Distribution Operating Code** applies to the **DNO** and to **Users**, which in this **Distribution Operating Code** means:-

(a) **High Voltage Customers**.

(b) **Embedded Generators** connected to the **DNO’s Distribution System** at **HV**.

(c) **Other Authorised Distributors** connected to the **DNO’s Distribution System** at **HV**.
DISTRIBUTION OPERATING CODE (DOC)

DOC12.4 Procedure

DOC12.4.1 Proposal Notice

DOC12.4.1.1 When the DNO or a User intends to undertake a System Test which will have or may have an effect on the System of others normally six months notice, or as otherwise agreed by the DNO, of the proposed System Test will be given by the person proposing the System Test (the “Test Proposer”) to the DNO and to those Users who may be affected by such a System Test.

DOC12.4.1.2 The proposal shall be in writing (the "Proposal Notice") and shall contain details of the nature and purpose of the proposed System Test and will indicate the extent and situation of the Plant or Apparatus involved.

DOC12.4.1.3 If in the view of the recipients the information set out in the Proposal Notice is considered insufficient by the recipients they shall as soon as is reasonably practicable contact the Test Proposer with a request in writing for further information which shall be supplied as soon as reasonably practicable. The DNO shall not be required to do anything under this Distribution Operating Code until it is satisfied with the details supplied in the Proposal Notice or pursuant to a request for further information.

DOC12.4.1.4 If the DNO wishes to undertake a System Test the DNO shall be deemed to have received a proposal of that System Test.

DOC12.4.2 Preliminary Notice and Establishment of Test Panel

DOC12.4.2.1 The DNO shall have overall co-ordination of the System Test. Using the information supplied to it under DOC12.4.1 the DNO shall determine in its reasonable estimation, which Users other than the Test Proposer may be affected by the proposed System Test.

DOC12.4.2.2 The DNO shall, with the agreement of the Users which it has identified may be affected, appoint a Test Coordinator as soon as reasonably practicable after it has received a Proposal Notice and in any event prior to the distribution of the Preliminary Notice referred to below.

(a) Where the DNO decides that the DNO’s Distribution System will or may be significantly affected by the proposed System Test, then the Test Coordinator shall be a suitably qualified person nominated by the DNO.

(b) Where the DNO decides that the DNO’s Distribution System will not be significantly affected by the proposed System Test, then the Test Coordinator shall be a suitably qualified person nominated by the proposer of the System Test, in consultation with the DNO.

(c) The DNO shall as soon as reasonably practicable after it has received a Proposal Notice contact the Test Proposer where the Test Coordinator is to be (pursuant to this Distribution Operating Code) a person nominated by the Test Proposer and invite him to nominate a person. If the Test Proposer is unable or unwilling to nominate a person within seven days of being contacted by the DNO then the proposed System Test will not take place.

DOC12.4.2.3 The DNO will notify all Users identified by it under DOC12.4.2.1 in writing of the proposed System Test which in this Distribution Operating Code shall be known as a Preliminary Notice. The Preliminary Notice will contain:
(a) The details of the nature and purpose of the proposed System Test, the extent and situation of the Plant and/or Apparatus involved and the Users involved.

(b) An invitation to nominate within fourteen days a suitably qualified representative (or representatives if the Test Coordinator informs the DNO that it is appropriate for a particular User) to be a member of a Test Panel for the proposed System Test.

(c) The name of the DNO representative (or representatives) on the Test Panel for the proposed System Test.

(d) The name of the Test Coordinator and whether he was nominated by the proposer of the System Test or by the DNO.

DOC12.4.2.4 The Preliminary Notice shall be sent within one month of the receipt by the DNO of the Proposal Notice or the receipt of any further information requested under DOC12.4.13, whichever is the later. Where the DNO is the Test Proposer the Preliminary Notice will be sent as soon as possible after the proposed System Test has been formulated.

DOC12.4.2.5 If replies to the invitation in the Preliminary Notice to nominate a representative to be a member of the Test Panel have not been received within fourteen days, the User which has not replied shall not be entitled to be represented on the Test Panel.

DOC12.4.2.6 The DNO shall as soon as possible after the expiry of that fourteen day period appoint nominated persons to the Test Panel and notify all relevant Users - of the composition of the Test Panel.

DOC12.4.3 Test Panel

DOC12.4.3.1 A meeting of the Test Panel shall take place as soon as possible after the DNO has notified relevant Users of the composition of the Test Panel, and in any event within one month of the appointment of the Test Panel.

DOC12.4.3.2 The Test Panel shall consider:-

(a) The details of the nature and purpose of the proposed System Test and other matters set out in the Proposal Notice (together with any further information requested under DOC12.4.2).

(b) The economic, operational and risk implications of the proposed System Test.

(c) The possibility of combining the proposed System Test with any other tests and with Plant and/or Apparatus outages which arise pursuant to the Operational Planning requirements of the DNO, NGC and Users.

(d) The implications of the proposed System Test on plant which comprise or contain BM Units which are active (i.e. submitting bid-offer data) in the Balancing Mechanism insofar as it is able to do so.

DOC12.4.3.3 Users who received a Preliminary Notice concerning the proposed System Test (whether or not they are represented on the Test Panel) shall be obliged to supply that Test Panel upon written request with such details as the Test Panel reasonably requires in order to consider the proposed System Test.
DOC12.4.3.4 The Test Panel will meet as often as the Test Co-ordinator deems necessary to conduct its business and he shall be the person to convene a meeting.

DOC12.4.4 Proposal Report

(a) DOC12.4.4.1 Within two months of the first meeting, the Test Panel shall submit a report, which in this Distribution Operating Code shall be called a Proposal Report, which shall contain: System Test (including the manner in which the System Test is to be monitored).

(b) An allocation of costs (including unanticipated costs) between the affected parties, (the general principle being that the Test Proposer will bear the costs).

(c) Such other matters as the Test Panel consider appropriate.

The Proposal Report may include requirements for indemnities to be given in respect of claims and losses arising from the System Test. All System Test procedures must comply with all applicable legislation.

DOC12.4.4.2 If the Test Panel is unable unanimously to agree on any decision in preparing its Proposal Report the proposed System Test shall not take place and the Test Panel will be dissolved.

DOC12.4.4.3 The Proposal Report will be submitted to the DNO and to each User who received a Preliminary Notice under DOC12.4.2.

DOC12.4.4.4 Within fourteen days of receipt of the Proposal Report, each recipient shall respond to the Test Coordinator with its approval of the Proposal Report or its reason for non-approval.

DOC12.4.4.5 In the event of non-approval by one or more recipients, the Test Panel shall as soon as practicable meet in order to determine whether the proposed System Test can be modified to meet the objection or objections.

DOC12.4.4.6 If the proposed System Test cannot be so modified, then the System Test will not take place.

DOC12.4.4.7 If the proposed System Test can be so modified, the Test Panel shall as soon as practicable, and in any event within one month of meeting to discuss the responses to the Proposal Report, submit a revised Proposal Report and the provisions of DOC12.4.4.3 and DOC12.4.4.4 will apply to that submission.

DOC12.4.4.8 In the event of non-approval of the revised Proposal Report by one or more recipients, the System Test will not take place and the Test Panel will be dissolved.
DOC12.4.5 Final Test Programme

DOC12.4.5.1 If the Proposal Report (or, as the case may be, the revised Proposal Report) is approved by all recipients, the proposed System Test can proceed and at least one month prior to the date of the proposed System Test, the Test Panel shall submit to the DNO and all recipients of the Proposal Notice a programme which in this Distribution Operating Code shall be called a “Final Test Programme” stating the switching sequence and proposed timings, a list of those staff involved in the carrying out of the System Test (including those responsible for site safety) and such other matters as the Test Panel deem appropriate.

DOC12.4.5.2 The Final Test Programme shall bind all recipients to act in accordance with the provisions contained within the programme in relation to the proposed System Test.

DOC12.4.5.3 Any problems with the proposed System Test which arise or are anticipated after the issue of the Final Test Programme and prior to the day of the proposed System Test must be notified to the Test Coordinator as soon as possible in writing. If the Test Coordinator decides that these anticipated problems merit an amendment to or postponement of the System Test, he shall notify any party involved in the proposed System Test accordingly.

DOC12.4.5.4 If on the day of the proposed System Test operating conditions on the System are such that any party involved in the proposed System Test wishes to delay or cancel the start or continuance of the System Test, they shall immediately inform the Test Coordinator of this decision and the reasons for it. The Test Coordinator shall then postpone or cancel, as the case may be, the System Test and shall if possible, agree with all parties involved in the proposed System Test another suitable time and date or if he cannot reach such agreement, shall reconvene the Test Panel as soon as practicable which will endeavour to arrange another suitable time and date and the relevant provisions of the Distribution Operating Code shall apply.

DOC12.4.6 Final Report

DOC12.4.6.1 At the conclusion of the System Test, the Test Proposer shall be responsible for preparing a written report (the “Final Report”) of the System Test for submission to the DNO and other members of the Test Panel.

DOC12.4.6.2 The Final Report shall include a description of the Plant and/or Apparatus tested and of the System Test carried out, together with the results, conclusions and recommendations for submission to other members of the Test Panel.

DOC12.4.6.3 The Final Report shall not be distributed to any party which is not represented on the Test Panel unless the Test Panel, having considered the confidentiality issues, shall have unanimously approved such distribution.

DOC12.4.6.4 When the Final Report has been submitted under DOC12.4.2.1 the Test Panel shall be dissolved.
DISTRIBUTION DATA REGISTRATION CODE (DDRC)
DDRC1 INTRODUCTION

DDRC1.1 The various sections of the Distribution Code require the DNO and Users to exchange and update data from time to time. The data which is specified in each section of the Distribution Code is summarised in the Distribution Data Registration Code (DDRC).

DDRC1.2 The Distribution Data Registration Code (“DDRC”) provides a series of schedules summarising all requirements for information of a particular type. Each class of User is then referred to the appropriate schedule or group of schedules for a statement of the total data requirements in his case.

DDRC1.3 The DDRC specifies procedures and timings for the supply of data and subsequent updating, where the timings are covered by detailed timetables laid down in other sections of the Distribution Code they are not necessarily repeated in full in the DDRC.

DDRC1.4 In the case of an Embedded Generator seeking a connection to the DNO’s Distribution System then irrespective of its potential involvement in the Balancing Mechanism, discussions on connection will be with the DNO concerned with the connection arrangements, in addition to any discussions required with NGC under the Grid Code. References to “Embedded Generator” in the DDRC shall include existing and prospective Embedded Generators.

DDRC2 OBJECTIVE

The objective of the DDRC is to collate and list in a readily identifiable form all the data to be provided by:

(a) Each category of User to the DNO under the Distribution Code.
(b) The DNO to each category of User under the Distribution Code.

DDRC3 SCOPE

The DDRC will apply to the DNO and to all Users which for the purpose of the DDRC are listed below:

(a) Customers It is not intended that the Distribution Code shall generally apply to small Customers individually; their obligations will be dealt with on their behalf by their Supplier.
(b) Embedded Generators.
(c) Other Authorised Distributors connected to the DNO’s Distribution System.
(d) Suppliers
(e) Any other person who is making application for use of or connection to the DNO’s Distribution System.
DDRC4  DATA CATEGORIES

DDRC4.1  Categories of Data

Within the DDRC the data required by the DNO is allocated to one of the following three categories:

(a) Standard Planning Data (SPD)
(b) Detailed Planning Data (DPD)
(c) Operational Data (OD)

DDRC4.2  Standard Planning Data (SPD)

DDRC4.2.1 Standard Planning Data is that data listed in the Distribution Planning and Connection Code which is required to be supplied by all Users when making application for connection to and/or use of the DNO’s Distribution System in order that the DNO may assess the implications for making the connection.

DDRC4.2.2 Standard Planning Data will be provided to the DNO in accordance with Section DPC6 and DPC7 of the Distribution Planning and Connection Code.

DDRC4.2.3 Following an agreement for connection/use of System, it is a requirement of the Distribution Planning and Connection Code that estimated data supplied by Users should be replaced by actual values prior to connection which will be referred to as Registered Data.

DDRC4.3  Detailed Planning Data (DPD)

DDRC4.3.1 Detailed Planning Data is that data listed in the Distribution Planning and Connection Code which is required to be supplied by the Users specified for connection to and/or use of the DNO’s Distribution System.

DDRC4.3.2 Detailed Planning Data will be provided to the DNO in accordance with Section DPC6 and DPC7 of the Distribution Planning and Connection Code.

DDRC4.3.3 Following an agreement for connection/use of System, it is a requirement of the Distribution Planning and Connection Code that estimated data supplied by Users should be replaced by measured values prior to connection.

DDRC4.4  Operational Data (OD)

DDRC4.4.1 Operational Data is data, which is required by the Distribution Operating Codes.

DDRC4.4.2 Operational Data is required to be supplied in accordance with timetables set down in the relevant Distribution Operating Codes and is repeated in tabular form in the schedules attached to this DDRC.
DDRC5 PROCEDURES AND RESPONSIBILITIES

DDRC5.1 Responsibility for Submission and Updating of Data

In accordance with the provisions of the various sections of the Distribution Code and unless otherwise agreed or specified by the DNO, each User is required to submit data as defined in DDRC6 following and the attached schedules.

DDRC5.2 Methods of Submitting Data

DDRC5.2.1 Data must be submitted to the DNO in writing and where possible in the format specified by the DNO and must indicate the name of the person who is submitting those schedules.

DDRC5.2.2 If a User wishes to change any data item then this must first be discussed with the DNO concerned in order for the implications to be considered and the change if agreed (such agreement not to be unreasonably withheld), should be confirmed by the submission of a revised data scheduler by verbal means with confirmation in writing if short timescales are involved.

DDRC5.2.3 The DNO will supply data as requested by Users and as agreed by the DNO where no obligation of confidentiality exists.

DDRC5.3 Changes to User’s Data

Whenever a User becomes aware of a change to an item of data, which is registered with the DNO the User, must notify the DNO in accordance with the appropriate section of the Distribution Code. The method and timing of the notification to the DNO is set out in the appropriate section of the Distribution Code.

DDRC5.4 Data Accuracy and Data not Supplied

DDRC5.4.1 The User is solely responsible for the accuracy of data (or of changes to data) supplied to the DNO.

DDRC5.4.2 Any data which the User fails to supply when required by any section of the Distribution Code may be estimated by the DNO if and when, in the DNO’s view, it is necessary to do so. Such estimates will be based upon data supplied previously for the same Plant or Apparatus or upon corresponding data for similar Plant or Apparatus or upon such other information as the DNO deems appropriate.

DDRC5.4.3 The DNO will advise a User in writing of any estimated data it intends to use pursuant to DDRC5.4.2 relating directly to that User’s Plant or Apparatus in the event of data not being supplied. The DNO will not be liable as a result of using that estimated data; the responsibility for the accuracy of that data will rest with the User as if the data has been supplied by that User.

DDRC5.4.4 It is a requirement of the Distribution Planning and Connection Code that Registered Project Planning Data is updated by the User annually.
DDRC6   DATA TO BE REGISTERED

DDRC6.1 Schedules 1-4 are not used within the Distribution Code.

DDRC6.2 Schedules 5a, 5b and 5c - Embedded Generating Plant Technical Information.

DDRC6.3 Schedule 5e - Embedded Transmission System

DDRC6.43 Schedule 6 - Demand forecasts - as described in DOC1, time varying output/generation forecasts for the Users defined in the scope.

DDRC6.54 Schedule 7 - Operational Planning - as described in DOC2, outage planning information.

DDRC6.56 Schedule 8 - System Design Information - comprising System technical data.

DDRC6.76 Schedule 9 - Load Characteristics - comprising the forecast data for load points indicating for example, the maximum load, the equipment that comprises the load, and the harmonic content of the load.

DDRC6.87 The schedules applicable to each class of User are as follows:-

</tbody>
</table>

Notes:
1. The q-axis parameters will be requested where required to increase the accuracy of the model.
2. The Poitier reactance is only required if the saturation factor is available. The saturation factor is defined as the PU value of field current required to generate 1.2PU voltage.
3. The Short Circuit Ratio (SCR) of a Generation Set is one measure of the performance of a machine under short circuit conditions and is important in determining the unit’s Stability performance. The reciprocal of the synchronous reactance (Xd) approximates to the SCR, the only difference is that the SCR considers saturation whereas Xd is derived from the air-gap line.

The **User** will need to provide the above characteristic for each asynchronous **Generation Set** based on the number of pole sets (i.e., two data sets for dual-speed 4/6 pole machines). For large sites, with multiple machines, the **User** may alternatively provide an equivalent network modeled as an asynchronous **Generation Set** with matching Generating Unit Transformer at the **Connection Point**. This equivalent should also model the site electrical network, power factor correction, etc.
Schedule 5c (iii)

DATA REGISTRATION CODE

GENERATION SET DATA FOR EMBEDDED GENERATING PLANTS ORS

5c (iii) Doubly Fed Induction Generation Sets

The User should, if possible, provide the following Detailed Planning Data for both the static and dynamic models of their machines. For large sites, with multiple machines, the DNO may agree that the User may provide an equivalent network model. Should models not be available, the User may agree with the DNO a series of operational parameters, which describe the operation of the Power Station under a series of static and dynamic network conditions. These may cover, amongst other requirements:

The delivery of real power:
- The maximum rate of rise and fall of power per minute.
- Voltage and Frequency ranges of operation.
- The ability (or not) to operate at a set reduced power and the rate at which this can be achieved.
- The instantaneous maximum output, system normal.

The delivery of reactive power:
- The range of reactive power available without compromising real power output.
- The maximum range of reactive power output available.
- The step change and/or rate of change of reactive power available.
- The ability (or not) to control reactive power and hence offer power factor or voltage control facilities.

The reaction to voltage depressions on the system:
- The ability (or not) to remain connected to the system for a series (1 to n) of independent voltage depressions of depth $= V_{(1-n)}$ % and length (in time)=$T_{(1-n)}$ ms.
- The ability (or not) to provide reactive (capacitive) power and the magnitude of that reactive power, during each voltage depression.
- The fault current contribution, in accordance with IEC 60909(1) during each voltage depression.
Schedule 5c (iv)

DATA REGISTRATION CODE

GENERATION SET DATA FOR EMBEDDED GENERATING PLANTS ORS

5c (iv) Series Converter Connected Generation Sets

The User should, if possible, provide the following Detailed Planning Data for both the static and dynamic models of their machines. For large sites, with multiple machines, the DNO may agree that the User will provide an equivalent network model. Should models not be available, the User may agree with the DNO a series of operational parameters, which describe the operation of the Power Station under a series of static and dynamic network conditions. These may cover, amongst other requirements:

The delivery of real power:
- The maximum rate of rise and fall of power per minute.
- Voltage and Frequency ranges of operation.
- The ability (or not) to operate at a set reduced power and the rate at which this can be achieved.
- The instantaneous maximum output, system normal.

The delivery of reactive power:
- The range of reactive power available without compromising real power output.
- The maximum range of reactive power output available.
- The step change and/or rate of change of reactive power available.
- The ability (or not) to control reactive power and hence offer power factor or voltage control facilities.

The reaction to voltage depressions on the system:
- The ability (or not) to remain connected to the system for a series (1 to n) of independent voltage depressions of depth $V_{(1-n)}$ % and length (in time)$= T_{(1-n)}$ ms
- The ability (or not) to provide reactive (capacitive) power and the magnitude of that reactive power, during each voltage depression.
- The fault current contribution, in accordance with IEC 60909(1) during each voltage depression.
