Dear Collette,

ESP Electricity Ltd – Modification Proposal concerning Use of System Charging Methodology

We are proposing to amend our Use of System Charging Methodology and in line with SLC 13.4, are hereby submitting our Modification Proposal Letter (an obligation on which we comment at the end of this letter).

The amendments to our Methodology are very simple and are directly related to the revised Standard Licence Condition numbering brought about by the recent electricity distribution licence review. They are purely housekeeping changes and do not relate to the methodology itself e.g. Licence Condition 4 updated to reflect the new numbering i.e. Condition 13; version number and dates updated.

We believe this amendment better achieves the Relevant Objective 13.3 (a) by ensuring our Methodology Statement quotes the correct Licence Condition numbering.

We are mirroring the release date of our UoS Charging Statement for the modification to take affect from i.e. 1st October 2009.

We would like to reiterate our earlier concern, we feel the Modification Proposal requirement for a simple 'housekeeping change' is excessive and certainly does not warrant a consultation.

Yours sincerely

A handwritten signature in black ink, appearing to read 'D M Townsend'.

Mrs D M Townsend
