Power Plus Communications Response: RPI-X@20 consultation

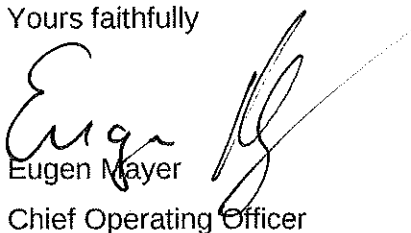

Dear Sir/Madam

Power Plus Communications is Europe's leading supplier of broadband powerline communication systems (BPL) for smart grids. By using existing power networks and converting them into IP based realtime communications platforms we create instant, cost effective smart energy networks.

We broadly welcome the proposed recommendations for the new framework and agree that business as usual is not an option going forwards.

In particular, we support the proposed time limited innovation stimulus package. We hope that it allows DNOs and other parties to create the changes necessary to enable the sustainable energy sector to flourish in the UK.

Yours faithfully

Eugen Mayer
Chief Operating Officer
