Original Answer:			

Question:	Can you provide more detail on how the Joule Centre will work with core project team?
------------------	---

Answer:	<p>We have selected the Joule Centre as our learning and dissemination partner due to their experience of supporting development projects within the sustainable energy sector. The Joule Centre has proven experience of facilitating collaboration between differing organisations across industry and academic sectors, which is an important aspect of the Project.</p> <p>The Joule Centre will bring together all learning from the various work streams within the Project in order to provide a comprehensive and cohesive view of relevant learning.</p> <p>To achieve this we will appoint appropriate research students, supported by academics, across all aspect of the Project to work in collaboration with the Project team, initially to define the process for learning collection, and then the development of materials to align with our agreed program of dissemination.</p> <p>We believe this approach will not only provide a structured and effective approach to the collation of learning gained, but will also demonstrate the effectiveness of utilising appropriately skilled facilities to support a Project of this nature.</p>
