

Typical conventional connections

Individual service pipes from main to individual Emergency Control Valves (ECV) and primary meters

Alternative typical conventional connections

Individual service pipes to individual Emergency Control Valves (ECV) and primary meters, connected to a gas main (laid in private land and so requiring an easement for maintenance)

Typical Sub Deduct connections

Single service pipe from main to Primary Emergency Control Valve (ECV) and Meter and then pipework to Secondary ECVs and Meters

----- Disputed pipework
