Dear Anthony,

Vattenfall Wind Power welcomes the opportunity to provide our views for the consultation on small transmission connected generators discount as set out in SLC C13.

On top of our activities in England, Vattenfall Wind Power Limited, currently operates one wind farm on the Isle of Skye and has several others in the planning stage in Scotland.

As a wind farm owner operating across Great Britain we feel that the small generators in Scotland should continue to receive the discount in order that these wind farms are treated consistently with the other farms we operate in England. We therefore strongly support extending the small generator discount for an agreed period at the current value.

Yours sincerely,

Lionel Avignon
Head of Generation UK
