Project code:	WPDT2003	Question Number	17
Question date	13/09/11	Answer date	20/09/11
Submission section question relates to	Section 4b		
Topic	Cost Savings		
Question	This section states that "If battery storage is jointly financed between DNOs and customers each funding 50%, the estimated DNO costs are £17,900 ...". What amount are you assuming the customer will pay for the battery? Is this an upfront cost? Does the customer pay any other upfront costs eg for the LV connection manager?		
Notes on question			
Answer	<p>There are no costs for customers' for the BRISTOL trial. For future uses of BRISTOL it is assumed £700 per customer for a 50% ownership of the 4.8kWh batteries.</p> <p>During the project the most appropriate mechanism for funding will be evaluated. This may include storage being funded through green deal, being treated as a registered asset and funded through customer DUoS payments or being purchased outright.</p> <p>All other project costs including the LV Connection Manager and communications have been included within the DNO finances.</p>
