Project code:	WPDT2003	Question Number	1
Question date	25 August 2011	Answer date	30 August 2011
Submission section question relates to	4 (a) and appendix F		
Topic	Carbon		
Question	The carbon assessment makes reference to solar PV as a means to reduce carbon, however the bid refers to heat pumps, EV, and reduced road works as contributing to carbon abatement - has this been factored into the carbon emissions calculations?		
Notes on question			
Answer	<p>The impact of heat pumps EVs and associated road works have not been considered due to the level of uncertainty in relation to the expected network penetration. There is certainty regarding the PV take-up rate as there is direct control due to installation as part of this project. Therefore, a conservative estimate of the carbon savings has been calculated using the data available with adequate confidence in the figures.</p>
