Topic	Evaluation Criteria		
Question	Would the costs of installation of remote control (@£5k per remote control point) be borne by contracted C2C customers?		
Notes on question	n/a		
Answer	<p>Within the C₂C Project, there are funds allocated for the provision of remote control equipment to be installed at customers' premises, both for new connection customers and for existing customers participating and providing the post fault demand side response required by the Trial..</p> <p>Once the C₂C Method has been proven, we expect all new connection customers and existing customers wishing to take advantage of a cheaper connection or to earn additional income from this form of demand side response provision would fund the installation of the remote control equipment as a requirement of participation. Our calculations of net benefit of a full roll out on the scale of the Trial, Electricity North West and GB have included this assumption. As this new market develops we expect to see customers choosing to work with an aggregator/ supplier who installs this equipment and contracts with Electricity North West.</p>
