Project code:	WPDT2002	Question Number	22
Question date	15.11.11	Answer date	17.11.11
Submission section question relates to	Appendix G/Section 5		
Topic	Knowledge Dissemination/SDRC		
Question	In your SDRC 9.1 you state that you will hold two workshops which will provide an opportunity to present to DNOs on the outline plans and final design specification of the SIM. We understand that a primary objective of this project is to produce a SIM that can be used by all DNOs. With this in mind, can you provide further details on how DNOs will be able to feed in to the development of the design specification for the SIM, so that they have some ownership of it, either through these workshops or other avenues?		
Notes on question			

<p>Answer</p>	<p>For clarity, the purpose of FALCON is to share the learning from our Method, which includes:</p> <ul style="list-style-type: none"> • deployment of the six intervention techniques (and combinations thereof) • designing, developing and testing the SIM and, • at the end of the project, producing a validated SIM prototype. <p>At the end of FALCON we do not expect to produce a software product that can be installed and used by all DNOs – this will form part of commercialising the SIM, which is outside the scope of the project.</p> <p>During the project as described above, as a minimum, other DNOs will be able to input via the scheduled workshops DE1 (March 2012) - DE5 (March 2015).</p> <p>Specifically, during each of the project phases (solution design, solution build and trials implementation), there is at least one scheduled dissemination event at which DNOs will be able to provide their inputs.</p> <p>In addition to this we will hold more informal meetings / sessions with DNOs to help them understand how the SIM is being developed and give them an opportunity to feedback and input to the design and build team before holding a workshop to disseminate all inputs / feedback through a workshop to all DNOs.</p>
