Project code:	SPT 2003	Question Number	5
Question date	25/08/2011	Answer date	30/08/2011
Submission section question relates to	Appendix D		
Topic	Whitchurch site		
Question	Are we correct in assuming that there is no significant planned renewable generation for Whitchurch networks?		
Notes on question			
Answer	<p>Yes, your assumption is correct, we are not aware of any significant planned renewable generation in the Whitchurch network. From our G83 records, we are aware of only 17 small scale embedded generators (SSEG) within the general Whitchurch area out of a total of 1370 of such records across SP Manweb region.</p> <p>This provides a contrasting situation to Wrexham to ensure that the trials are representative of the various network configurations.</p>
