

Dear Mr Mungall,

I am a member of the public, resident in the Shetland Islands.

I have read [Project TransmiT - Electricity transmission charging: assessment of options for change - PDF - 1612Kb](#) , at least as much as I am capable of doing with limited technical knowledge of the subject of electricity transmission and charging.

I don't know if it is appropriate to do so, but I would like to lend my support for the Ofgem assessment as outlined in this document. It makes sense particularly in respect of the Shetland Islands. I agree that we need to view this issue as a national strategy and something that can affect the price of energy for all consumers nationally. It should not be seen as something to manipulate where local interest are motivated by profit from the likes of renewable energy schemes. Particularly controversial renewable that have questionably public support and schemes that are more motivated by profit than by environmental or community/ social impacts.

For what it is worth, I applaud this report as it stands.

Yours sincerely,

Mark Chambers
