

Steve

As requested;

Consultation

We welcome your views on our proposal for the future of the MAM approval scheme, and in particular any advantages or disadvantages that may occur as a result of this transfer.

Question One: Do you consider that a MAM approval scheme remains appropriate for gas metering?

Yes

Question Two: Do you agree that it is more appropriate for the MAM approval scheme to be managed by the industry rather than directly under Ofgem?

Yes

Question Three: Do you agree with our policy proposal, to transfer the MAM approval scheme to the SPAA? If not, please set out what your preference would be and why?

Yes

Question Four: Are there any advantages or disadvantages to our approach that we have not taken into consideration in this consultation, particularly in the context of the smart metering roll out? If so, please set these out.

No

Question Five: How do you consider the scheme should be managed and funded in terms of a Management Board and audits?

The current MAMCoP board is made up of representatives from MAM's, DN's, HSE, etc. which helps to identify and resolve technical issues. Does the proposal include for this under SPAA?

Question Six – Do you consider that the proposed licence drafting is appropriate to give effect to the proposed scheme transfer and ongoing governance?

Yes

Thanks
