Submission section question relates to	2		
Topic	Project Description		
Question	Please explain how the introduction of "Novel Commercial Frameworks" is intended to integrate with Methods Alpha, Beta and Gamma and comment on the extent to which the project will depend on participation by the DG community for its success.		
Notes on question			
Answer	<p>The introduction of novel commercial frameworks will involve supplementary Connection Agreements for generators who elect to increase their connection based on trial Method learning and output. The commercial arrangement could be developed through Method Alpha, Beta or Gamma. These commercial frameworks would present an alternative to conventional network reinforcement options.</p> <p>It is recognised that the benefit of these frameworks could be enhanced by participation from and consultation with the DG community. Initial discussions with Cofely have laid the foundations for this. However, the trialling of the novel commercial frameworks is dependent on a number of factors e.g. DG developer recognising the business case for accepting an alternative connection arrangement. This is highly useful for this project; however it is not core learning.</p>
