Submission section question relates to	4		
Topic	Evaluation Criteria		
Question	To what extent are the projected benefits of the deployment of the proposed solution affected if anticipated levels of CHP take up are not forthcoming?		
Notes on question			
Answer	<p>WPD has confidence in the CHP plans proposed by Birmingham City Council and their district energy partner Cofely. This is gained through their very successful and long running partnership in facilitating CHP plants in the City. If anticipated CHP integration is not forthcoming, the project still offers significant network operational efficiency and security of supply benefits to all customers.</p> <p>The proposed solution will develop electricity networks which are able to accommodate significant amounts of Fault Level contributing devices, for example generators, motors and pumps. In the transition towards a low carbon economy it is likely that the use of distributed generators, motors and pumps could increase.</p>
