Project code:	SPD2004	Question Number	SPD002
Question date	23/08/2012	Answer date	30/08/2012
Submission section question relates to	Full Submission Workbook		
Topic	Net Benefits		
Question	The Net Benefits sheet of the Full Submission workbook show three methods (Method 1, Method 2 and Method 3). This is in contrast to the number of methods (eight) stated in Full submission proforma Page 3. Please explain why the benefits have been summarised in this way.		
Notes on question			
Answer	<p>Each of the methods detailed on page 3 form different components of the overall trial. It was not considered possible to provide a net benefits analysis for each of these in their own right as per the net benefits sheet which was the reasoning for using the case studies to demonstrate how the various methods combine to provide an overall net benefit. For example, it is not possible to provide a base case cost for providing existing data (in comparison to method 1 on page 3) relating to connections as these costs are embedded within the business and could not be separately or accurately identified.</p> <p>Each of the use cases which were developed involve a combination of the methods detailed on page 3. Within the Net Benefits sheet of the workbook we have identified the unique methods which were used for the net benefits analysis whilst some of the other methods would also contribute to these benefits.</p> <p>The case studies are also drawn from real examples of connection enquiries within the trial area which allowed a detailed comparison to be provided. Details of these are provided in response to question SPD001</p>
