Project code:	SPD2004	Question Number	SPD026
Question date	27/09/2012	Answer date	02/10/2012
Submission section question relates to	5		
Topic	Knowledge Dissemination		
Question	Please explain who will own the IP rights of all the technology that will be developed through the project. Please also clarify the basis on which DNOs will have access to this technology and all foreground and background IPR, including licensing and discount arrangements.		
Notes on question			
Answer	<p>With respect to the development of the Active Network Management (ANM), any IPR development will be funded by SGS.</p> <p>The aim of ARC is to extend the scope of ANM to provide better value to our those parties seeking access to the network by proving this innovative technology. The primary focus will be on the novel application of ANM to address new challenges which have not previously used ANM as a solution. As a result it is expected that new IPR will not be an issue within the scope of this project.</p> <p>All IPR will be managed in line with the Default LCNF governance on IPR.</p>
