Subject: WPD Connection Competition Test Application

James.

West Coast Energy has had experience with the connection and applying for connection, of a number of major windfarm projects to the WPD distribution networks over the years; initially to the WPD South Wales and WPD South West areas and more recently the WPD Midlands East network. We are dealing with a relatively small number of very large projects and in each case we agreed to use WPD to provide the connection after considering alternative connection service providers.
