

Energy Companies Obligation (ECO) Compliance Update

www.ofgem.gov.uk

Issued August 2013

Issue 1

This Compliance update presents energy efficiency measures notified by suppliers to Ofgem by the end of June and **approved** by Ofgem by the end of July 2013. This report currently excludes excess measures carried forward from CERT and CESP. The Department of Energy and Climate Change's (DECC) latest monthly [Statistical Release](#) reports on **all measures** notified by suppliers to Ofgem for the same period, including those which are not yet approved.

What is ECO?

The Energy Companies Obligation (ECO) is a government scheme which places obligations on larger energy suppliers to deliver energy efficiency measures to domestic householders in Great Britain. Ofgem is responsible for administering ECO on behalf of DECC. Each month energy suppliers notify Ofgem of measures installed in the previous month.

The three obligations under ECO are:

- **Carbon Emissions Reduction Obligation (CERO):** promotes the installation of solid wall and hard-to-treat cavity wall insulation alongside other insulation measures and connections to district heating systems.
- **Carbon Saving Community Obligation (CSCO):** promotes the installation of insulation measures and connections to district heating systems in areas of low income and rural areas.
- **Home Heating Cost Reduction Obligation (HHCRO):** promotes the installation of measures that reduce the overall cost of home heating to low income and vulnerable households, including the repair and replacement of boilers.

Approved measures

Fig. 1) ECO approved measures by category

The table below shows the cumulative measures approved by Ofgem.

Measure Category	CERO	CSCO	HHCRO	Cumulative Total
Solid Wall Insulation	419	482	0	901
Cavity Wall Insulation	0	2,819	1,256	4,075
Hard-To-Treat Cavity Wall Insulation ¹	620	16	0	636
Loft Insulation	1,406	12,386	9,594	23,386
Other Insulation ²	54	29	0	83
Boiler – Replacement	N/A ⁴	N/A	4,854	4,854
Boiler – Repair	N/A	N/A	97	97
Other Heating ³	N/A	N/A	0	0
District Heating System	0	0	0	0
Micro-generation	N/A	N/A	0	0
Total	2,499	15,732	15,801	34,032

¹ Hard-to-treat cavities include narrow cavities, cavity walls in tall buildings, cavity walls in certain non-standard construction types or those which are too difficult to treat with standard materials or require works to be carried out before installation.

² Includes hot water cylinder insulation, draught proofing and window glazing.

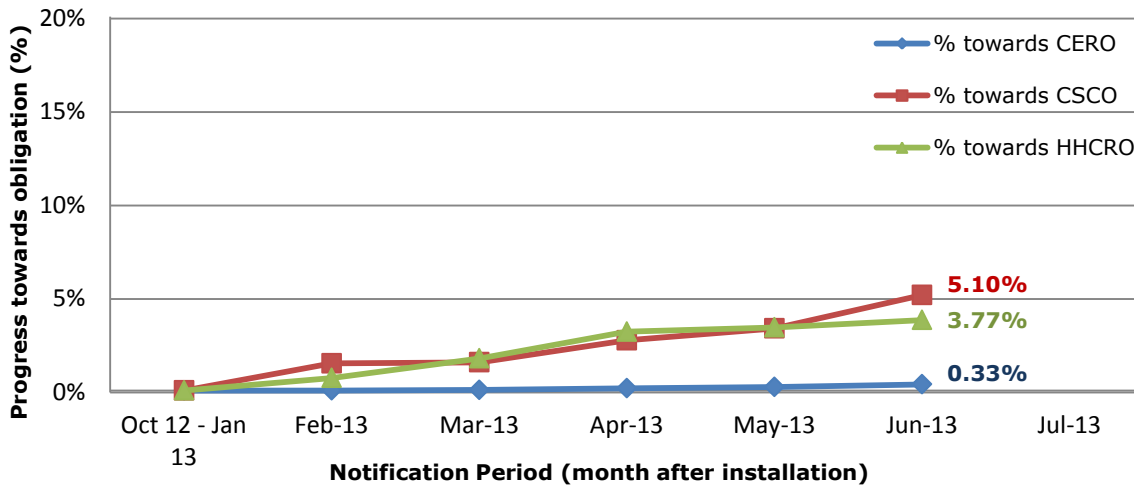

³ Includes heating controls, heat recovery ventilation and warm air units.

⁴ N/A - this measure category is not eligible to be claimed under this obligation.

Progress towards obligations

Fig. 2) Monthly progress towards ECO obligations (approved measures)

The graph below shows suppliers' consolidated cumulative monthly progress towards phase 1 and 2 obligations (phases 1 & 2 cover the period 1 January 2013 to 31 March 2014).

The run rate (as shown in Figure 2 above) will need to increase in order for suppliers to meet their obligations.

Notified measures

In addition to the 34,032 approved measures presented in Figure 1, a further 81,691 measures were notified to Ofgem by the end of June. Together, these figures constitute the 115,723 measures published in DECC's July Statistical Release.

Of the c.82,000 measures which were notified to Ofgem but not yet approved, c.30,000 have been sent back to suppliers for data correction or completion of missing information. Subject to these changes being made, they will be approved once they are re-submitted. A further c.27,000 are currently undergoing further checks to ensure that they are valid measures under ECO; the majority of which are hard-to-treat cavity measures in CERO. The remaining c.25,000 measures are currently being processed and are expected to be approved shortly if the necessary information is in order. ECO is a new scheme. We are working closely with suppliers to resolve any issues relating to the notification of measures.
