

Energy Companies Obligation (ECO) Compliance Update

www.ofgem.gov.uk

Issued February 2014

Issue 7

This compliance update presents energy efficiency measures notified by energy companies to Ofgem by the end of December and **approved** by Ofgem by the end of January 2014. This report currently excludes excess measures carried forward from the Carbon Emissions Reduction Target (CERT) and Community Energy Saving Programme (CESP), which are likely to be material for some companies. The Department of Energy and Climate Change's (DECC) latest monthly [Statistical Release](#) reports on **all measures** notified by energy companies to Ofgem to the end of December, including those which are not yet approved. DECC has proposed changes to ECO; this report is based on existing legislation and does not take account of these potential changes.

What is ECO?

The Energy Companies Obligation (ECO) is a government scheme which places obligations on larger energy companies* to deliver energy efficiency measures to domestic premises in Great Britain. Ofgem is responsible for administering ECO on behalf of DECC. Each month energy companies notify Ofgem of measures installed in the previous month.

The three obligations under ECO are:

- **Carbon Emissions Reduction Obligation (CERO):** solid wall and hard-to-treat cavity wall insulation alongside other insulation measures and connections to district heating systems;
- **Carbon Saving Community Obligation (CSCO):** insulation measures and connections to district heating systems in areas of low income and rural areas; and
- **Home Heating Cost Reduction Obligation (HHCRO):** measures that reduce the overall cost of home heating to low income and vulnerable households, including insulation measures and the repair and replacement of boilers.

Approved measures

Fig. 1) ECO approved measures by category

The table below shows the cumulative measures approved by Ofgem.

Measure Category	CERO	CSCO	HHCRO	Cumulative Total
Solid Wall Insulation	14,503	1,717	8	16,228
Cavity Wall Insulation	145	20,598	6,344	27,087
Hard-To-Treat Cavity Wall Insulation ¹	30,266	366	-	30,632
Loft Insulation	6,432	51,514	24,209	82,155
Other Insulation ²	676	345	31	1,052
Boiler – Replacement	N/A ⁴	N/A	113,220	113,220
Boiler – Repair	N/A	N/A	352	352
Other Heating ³	N/A	N/A	17,970	17,970
District Heating System	124	356	-	480
Micro-generation	N/A	N/A	-	-
Total	52,146	74,896	162,134	289,176

¹ Hard-to-treat cavities include narrow cavities, cavity walls in tall buildings, cavity walls in certain non-standard construction types or those which are too difficult to treat with standard materials or require works to be carried out before installation.

² Includes hot water cylinder insulation, draught proofing and window glazing.

³ Includes heating controls, heat recovery ventilation and warm air units.

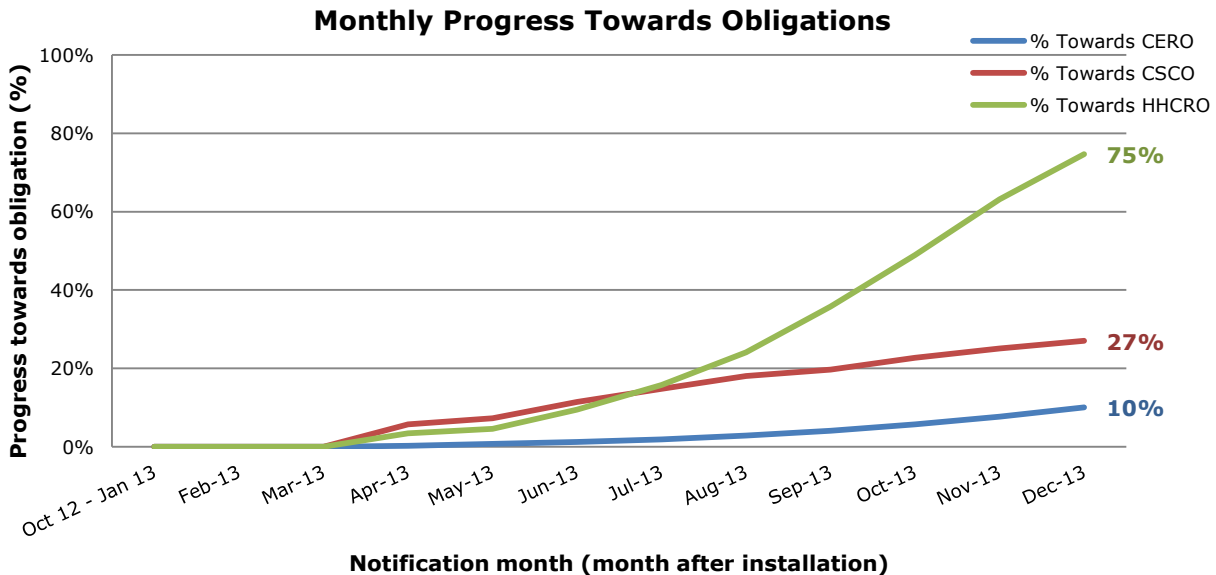

⁴ N/A - this measure category is not eligible to be claimed under this obligation.

Progress towards obligations

The scheme is currently 73% of the way through phases 1 and 2 (which cover the period 1 January 2013 to 31 March 2014).

Fig. 2) Cumulative overall progress towards phase 1 & 2 obligations (approved measures only)

The chart below shows energy companies' cumulative monthly progress towards phase 1 and 2 obligations. Note the legislative requirement on suppliers is 100% compliance against each of the obligations over the whole period to March 2015. The run rate will need to increase for CERO and CSCO in order for energy companies to meet their obligations.

Notified measures

In addition to the 289,176 approved measures presented in Figure 1, a further 172,550 measures were notified to Ofgem by the end of December. Together, these figures constitute the 461,726 measures published in DECC's January Statistical Release.

Of the 172,550 measures which were notified to Ofgem but not yet approved, circa 41,000 have been sent back to energy companies for data correction or completion of missing information. These measures will be reassessed and approved (if appropriate) once they are re-submitted. A further c.110,000 are currently undergoing further checks to ensure that they are valid measures under ECO; the majority of these are hard-to-treat cavity measures in CERO. The remaining c.21,000 measures are currently being processed and are expected to be approved shortly if the necessary information is in order. We are working closely with energy companies to resolve any issues relating to the notification of measures.

Still have questions?
