Project code:	ENWT205	Question Number	8
Question date	29 August 2013	Answer date	5 September 2013
Submission section question relates to	Section 2: Project Description – Early Bilateral		
Topic	Technical		
Question	Is the WEEZAP fitted to individual fuse lines or to replace the transformer LV links?		
Notes on question			
Answer	<p>The WEEZAP is a controllable single phase circuit breaker. Designed as a retrofit device it replaces a single phase fuse in the LV board of a distribution substation. So for each LV way on the LV board that forms part of an interconnected network in the <i>eta</i> Trial we will insert three WEEZAPs ie one for each phase.</p> <p>The transformer LV links will not be replaced.</p>
