Project code:	ENWT205	Question Number	7
Question date	29 August 2013	Answer date	5 September 2013
Submission section question relates to	Section 2: Project Description – Early Bilateral		
Topic	Technical		
Question	What is the method of communications to the capacitors for changing taps/capacitance?		
Notes on question			
Answer	<p>We will communicate with all the new <i>eta</i> equipment using standard mobile telephony technology ie GPRS/ 3G, which is our business as usual communications solution.</p> <p>Whilst all the devices can support digital radio communications or power line carrier communications modems the Trial will focus on GPRS and 3G; these being the lowest cost. All other communications types are mature technologies and hence no added learning would be obtained for the additional costs they would entail.</p>
