## Modifications to the electricity generation licence standard conditions to reflect offshore developments

Dear Yvonne,

Thank you for the opportunity to comment on your consultation on modifications to the electricity licence standard conditions to reflect offshore developments. This response is provided on behalf of RWE Npower Renewables Limited, a fully owned subsidiary of RWE Innogy GmbH.

In general, the modifications to the licence appear to be consistent with the aims of the consultation. We request clarification that the following change only extends the previously defined 'GB transmission system' to also include REZ and does not extend to transmission systems located in other states (e.g. transmission systems in another EU member state also connected to the GB transmission system. Note that generation in this other member state might be for the purpose of supply or electricity to premises within the GB, REZ or a designated area).

"national electricityGB transmission system<sup>1</sup>"

means the system consisting (wholly or mainly) of high voltage electric lines owned or operated by transmission licensees ~~within Great Britain~~ and used for the transmission of electricity from one generating station to a sub-station or to another generating station or between sub-stations or to or from any interconnector and includes any electrical plant or meters owned or operated by any transmission licensee ~~within Great Britain~~ in connection with the transmission of electricity.

Please do not hesitate to contact me if you require any further information in relation to our response.

Yours sincerely,

Jeremy Gummow  
Grid Regulation Manager
