RE: Consultation on 'Regulation of transmission connecting non-GB generation to the GB electricity transmission system'

Our key responses to the consultation are:

- 1. The governments should recognise the advantages of a phased approach to importation of renewables with Irish offshore forming Phase 1 for 2020 and Irish onshore following post-2020 as Phase 2 for onward export to Europe.**
- 2. Potential investors need to be fully informed of the investment proposition during 2014 to include all information and assurances that will allow decisions to invest.**

We refer you to the NOW Ireland submission for responses to the questions listed.

Regards,

By email
