

Dear Mr. Matthew Grant,

I am a resident of Rochfortbridge, County Westmeath, Ireland, where the "Export" project is "Proposed" to be located. The MOST important factor that you should be aware of is that **I do not consent to this project**. Companies have been working on this for years now and NO ONE has asked the people of Ireland, or the residents who will have to live in too close a proximity to wind turbines, if they support this project. I believe these companies have produced vague maps with proposed locations of turbines and expect the people who may have to live beside them to just accept them, although I have never been shown any info on any proposed plans.

Industrial Turbines up to 185m high are NOT acceptable within 2km of my home.

Industrial Turbines will impact negatively on the value of my property.

Industrial Turbines will be a blight on my landscape and Environment.

Industrial Turbines may impact on the health of myself and my family.

Industrial Turbines will not provide sufficient Long term jobs in this country.

There has been NO cost benefit analysis given to the public on this project.

There are not sufficient regulations in place to protect the residents in Ireland.

It is my opinion that the disadvantages will far outweigh the benefits to the people of Ireland.

The midlands of Ireland are low lying, it makes no sense to build wind turbines on low lying land, with or without residential areas ????????????

As a resident, I ask that you do NOT impose this project on small communities in Ireland and ask that you seek alternatives elsewhere or that will not have such negative impacts on our communities.

Yours faithfully,
