Subject: Regulation of transmission connecting non-GB generation to the GB electricity transmission system

Dear Matthew

I have read the above consultation document and have just one comment that I would like to feedback into the system.

The document quite rightly identifies that any non-GB connection to our system may come with a variety of technical and commercial designs including, but not limited to, whether it might involve consumer subsidy, 2 way flow, provides reinforcement to the GB system, whether it is connected to a non-GB transmission system, whether it has multiple users or whether it is a simple, single user, one way connection. Given the range of possibilities here it is important that flexibility is retained and that a 'one size fits all' solution, possibly involving unnecessary regulatory burdens, is not imposed on all potential non-GB connections.

Many of the potential connection designs will, quite rightly, be described and regulated as an Interconnector but other, simpler, assets may be more efficiently developed via one of the other options currently in use. I would be grateful if you could confirm that that Ofgem is not seeking to restrict choice for developers considering an asset, particularly where consumer subsidy is not sought.

Regards

Mark Petterson
