

Transposed from Email

Dear Kate,

I am responding to this consultation as the provider of the industry's MPAS system. One question is appropriate for me to answer...

In response to Question 7:

Are there any complications (not identified above) to uniquely identifying a Licence Lite supplier's customers on central systems?

3.27, 1.18, 1.21, 1.35 – It's not clear whether the Licence Lite MPID is required to be stored in MPAS along with the TPLS MPID or instead of the TPLS MPID. If the requirement is to store both MPIDs in MPAS then significant change would be required to MPAS, Distributor and Supplier systems. If both MPIDs are required I am particularly interested in how the secondary MPID would be provided by the Supplier to MPAS. Currently, the MPAS system stores one Supplier MPID with this MPID being the identified in the file header of the source DTC flow.

Kind regards

Richard
