

1. Virgin loft monitoring questions

- 1.1. For ECO2 virgin loft insulation measures there are additional requirements that must be met. These requirements apply to all virgin loft insulation measures installed from 1 April 2015.
- 1.2. The requirements include two new monitoring questions for virgin loft measures, one post-installation question and 1 scoring question. These questions are available below:

Technical monitoring question	Loft Insulation (virgin)	Post-Installation	Is a signed and completed virgin loft insulation declaration present in the loft?
Score monitoring question	Loft insulation (virgin)	Post-installation	Is there any evidence of any pre-existing loft insulation? (if there is evidence of pre-existing insulation mark as fail)

- 1.3. These two questions must be included in monitoring conducted on virgin loft insulation measures from 1 April.
