

Windflow UK Ltd response to Ofgem consultation on whether the voltage rule should take precedence over the High Cost Cap for Distributed Generation connections

Received by e-mail on 20 January 2015

Dear Olivia,

Windflow has experience of developing distributed generation projects across Scotland, mainly at 500 kW capacity.

We are in strong agreement with your proposal that the Voltage Rule should take precedence over the High Cost Cap. We consider that end users (whether demand or generation) should make shallow contributions to the costs of new connections, as deep reinforcement costs would most likely be very unequally distributed between projects.

Best regards

Andy Strowbridge
General Manager
