Dear Nisha,

Consultation on the Successful Delivery Reward Applications for Low Carbon Networks Fund projects.

Thank you for the opportunity to respond to the above consultation in respect of four successfully delivered projects, funded through the low carbon networks fund and now submitting applications for successful delivery reward.

During DPCR5, Electricity North West has delivered a successful innovation programme. To achieve this, and to build on previous innovations, we have actively followed the progress of other LCN Fund projects, including LV Network Templates, Low Carbon London, Flexible Plug and Play and Customer Led Network Revolution, to ensure learning is captured and we identify benefits that can be extended to our customers here in the North West.

We have also now reviewed the Successful Delivery Reward applications for the above projects and it is our belief that each project provides relevant evidence to demonstrate fulfillment of the funding licensee's commitments, as set out in their full submission document. This has been achieved by professional approaches to project management and delivery which delivered project outputs which have met or exceeded the expectations outlined at the beginning of the project.

Where change proposals have been requested and granted, there is evidence that these included full justification and were in consideration of achieving the best outcome for customers and to ensure maximum learning from the project was derived.

Yours sincerely,

Steve Cox
Head of Engineering
